FOR THE ONES WHO GET IT DONE

FOR THE ONES WHO TEAM UP TO GET IT DONE℠

Supplies & Solutions for Every Industry®

ACCESS TO EXPERTS WITH ANSWERS | 24/7 CUSTOMER SERVICE | FAST DELIVERY

A GUIDE **FOR THE ONES WHO GET IT DONE**

EVERYTHING YOU NEED FROM A **SINGLE, RELIABLE SOURCE**

Finding the right product requires the right information at your fingertips. Inside you'll find product specs, selection guides and indexes so you can feel confident you have what you need to get the job done right.

Your solutions don't end with this catalog. **Grainger.com®** has over **1.5 million products** in more than **30 categories**, plus tools and resources to support you every step of the way.

ACCESS TO EXPERTS WITH ANSWERS

Rely on our team of industry professionals for everything from safety and inventory management solutions to answers to tough product questions.

24/7 SUPPORT

Count on us day or night with round-the-clock customer service and after-hours branch service options.

NEXT-DAY DELIVERY ON MOST ORDERS

Get the products you need, when you need them. Most in-stock orders received by 5 p.m. (local time of the shipping facility) are delivered to the contiguous U.S. the next business day.

REAL-TIME AVAILABILITY & ORDER TRACKING

Head to **Grainger.com®** for access to shipping info and local branch product availability.

CURBSIDE & IN-STORE PICKUP

Stop by one of over 250 branches nationwide where our experienced staff is ready to help get you those last-minute in-stock items the same day.

ORDER YOUR WAY!

CONTENTS

ONLINE PURCHASING **SOLUTIONS**

Help reduce purchasing costs and increase productivity with Grainger's suite of digital solutions. Register and sign in to your Grainger account to get started.

GRAINGER.COM®

Check real-time product availability and the status of your current orders. You can also access order history and lists, set up auto-reorder and view your account pricing with just a click of a button. Our improved search tools and express checkout help you complete your orders in no time.

- **EASY-TO-FIND** PRODUCTS
- **SMART** ORDERING
- **FAST** CHECKOUT

GRAINGER ORDER MANAGEMENT SYSTEM (OMS)

Set controls on how much your employees can spend on orders, establish spending limits for specific time periods and set up an approval process tailored to your needs. It's easy and customizable.

- **CONTROL** YOUR SPEND
- **STREAMLINE** THE APPROVAL PROCESS
- **CREATE** USAGE REPORTS

ePROCUREMENT

This solution is a fully integrated connection between your company's preferred purchasing platform and Grainger. An eProcurement connection is set up to help you find products, place orders and make payments easily and efficiently. Grainger can connect with over 150 eProcurement platforms including SAP Ariba, Coupa, Jaggaer, Oracle and Workday.

- **MANAGE** YOUR SPEND
- **ENSURE** PROCUREMENT COMPLIANCE
- **AUTOMATE** PROCESSES

MOBILE APP

Use your smartphone or iPad® to place orders when you're on the go. Get pricing and availability by simply logging in and scanning the item number of the product you need, adding it to your cart and quickly checking out. Looking for a Grainger branch? No problem. You can locate the nearest branch right from the mobile app.

- **PLACE** ORDERS ON THE GO
- **CHECK** REAL-TIME AVAILABILITY
- **LOCATE** THE NEAREST BRANCH

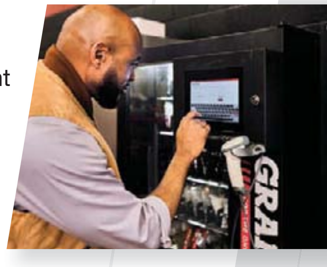
KeepStock®
Inventory Management

TAKE CONTROL OF YOUR STUFF

Inventory managed.
Space organized.
Time and money saved.

What if there were an easier way to help ensure you have the right parts, tools and supplies in the right place right when you need them? Put Grainger's expertise to work for you. It's almost like managing your stuff—those critical inventory items that help keep your operations running—on autopilot.



CMI: Tools for improved visibility and management of Grainger materials

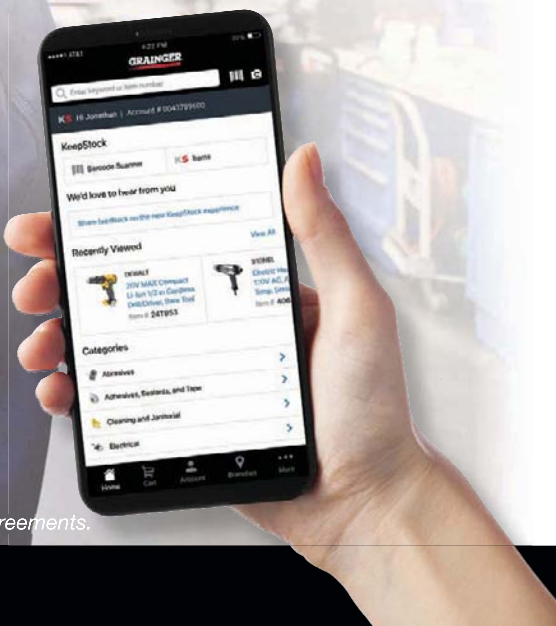
REPLENISH: Scheduled visits help ensure the right Grainger materials are kept on hand

VENDING: Vending helps control consumption of Grainger materials near their point of use

ONSITE: Dedicated resource manages all Grainger materials

MANAGED: Specialist provides MRO supply chain expertise and multi-supplier support

Contact your Grainger rep or visit grainger.com/keepstock to learn more about these and other inventory solutions.



Grainger KeepStock solutions are subject to customer eligibility and agreements.

RIGHT WHERE YOU NEED US

The experienced staff at your local Grainger branch is standing by with answers to your product questions and to help with returns, invoicing and service needs. Will-call ordering options can have in-stock items ready for pick up the same day at the branch—free of charge.

ABOUT GRAINGER'S INTERNATIONAL PRESENCE

International operations are complex. When it comes to getting the maintenance, repair and operating (MRO) products and services you need, your business demands an easy, reliable and consistent experience. Whether you manage a large manufacturing plant that produces products for millions of people or a small local business that residents rely on, Grainger makes doing business across borders easier with international solutions, managed locally, that help alleviate challenges associated with MRO.

WHY INTERNATIONAL OPERATIONS CHOOSE GRAINGER

Grainger offers MRO products, services and solutions that are globally served with a local experience to help you with the pressures associated with keeping your operations running and people safe. Grainger carries 250K–1.5M products* across 28–35 categories within the US, Canada, Mexico and UK, and serves businesses through Global Export across 120+ countries including Latin America, the Middle East and Asia Pacific with our dedicated export team that's ready to take care of your export needs.

GRAINGER IS READY TO HELP

MotorMatch® Selection Guide

Motors are used in a wide variety of applications. In some applications more than one motor design would work; in others, if an exact replacement cannot be found, a similar motor with slight differences in mechanical and electrical characteristics will provide reliable operation. The following selection guide is designed to help you choose the correct motor for your application.

STEP 1: GATHER MOTOR INFORMATION

You will need the following information to properly select a motor. If you are replacing a motor, much of the information can be found on the existing motor nameplate. See the sample nameplate on this page:

1-Phase (PH): Either single (1) or three (3). Match exactly.

2-Voltage (Volts): Match exactly.

3-Horsepower (HP): Very small motors are often rated in watts. Choose an equal or next higher HP.

4-Frame: Match exactly.

5-RPM: Match within 5%.

6-Frequency (Hz): Match exactly.

7-Service Factor (SF): Choose a motor of equal or greater number.

8-Design: See table on this page.

9-Enclosure (Encl.): See table on this page.

10-Duty: If current motor is intermittent duty, you may upgrade to continuous.

11-Bearing Type: Sleeve or Ball.

12-Thermal Protection: See Thermal Protection Information on this page.

AC MOTOR TYPES

Phase	Design	Typical RPM	Starting Torque as Percent of Full-Load Torque	Comparative Efficiency	Typical Uses
1	Shaded Pole	1050, 1550, 3000	Very Low 50-100%	Low	Small direct-drive fans & blowers
1	Permanent Split Capacitor (PSC)	825, 1075, 1625	Low 75-150%	Moderate	Direct-drive fans & blowers
1	Split-Phase	1140, 1725, 3450	Low to Moderate 130-170%	Moderate	Belt-drive & direct-drive fans & blowers, small tools, centrifugal pumps, & appliances
1	Capacitor-Start	1140, 1725, 3450	Moderate to High 200-400%	Moderate to High	Pumps, compressors, tools, conveyors, farm equipment, & industrial ventilators
3	3-Phase	1140, 1725, 3450	Moderate to High 200-300%	High	Applications where 3-Phase power is available

ENCLOSURE TYPES

Enclosure Type	How Can I Tell?	Where Do I Use This Enclosure?
Open Dripproof (ODP)/Open/ Open Air-Over (OPAO)	Ventilation holes in shell and/or endshield	Clean, dry, nonhazardous environments
Totally Enclosed Fan-Cooled (TEFC)/Totally Enclosed Nonventilated (TENV)	No ventilation holes in shell or endshield	Dirty, moist, nonhazardous environments
Hazardous Location	Enclosed. Must have a UL Hazardous Location nameplate on motor	Designed for use in hazardous environments as defined by National Electrical Code (NEC) classifications. NEC Class and Group are designated on UL Hazardous Location nameplate mounted on motor. See page 6 for more details.

STEP 2: DETERMINE THE RIGHT CATALOG SECTION

By your category: Many motors are listed by category. You will find these categories under "Motors" in the Product Index in the catalog. Turn to the specific page or section to find your motor. If your category is not listed in the index, choose your motor by its characteristics.

By the characteristics: Motor design, horsepower, RPM, frame, voltage, and enclosure. Grainger carries General Purpose motors designed for reliable use in a wide variety of applications, Definite Purpose motors for specific applications, HVAC motors for various air moving applications, and Pump motors for applications moving water and gases.

General Purpose Motors are designed for mechanical loads (also effective for air moving), and for hard-to-start applications such as conveyors, belt-driven equipment, machine tools, and reciprocating pumps. These motors feature ball bearings to handle heavier radial and axial loads and heavier construction for industrial applications.

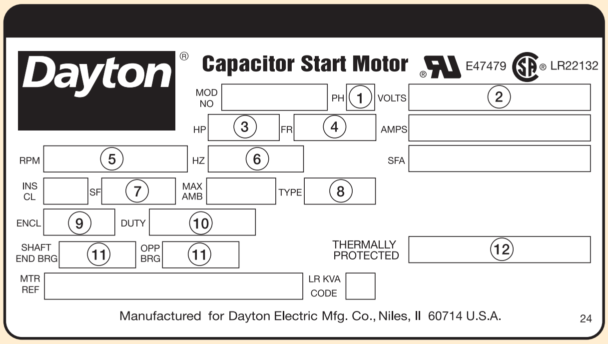
Definite Purpose Motors are designed for specific applications such as washdown, hazardous location, farm-duty, etc. Motor features are driven by the specific application's environment.

HVAC Motors are designed mostly for air moving and other light- to medium-duty applications, such as fans and centrifugal pumps, small tools, and office equipment.

Pump Motors are used for pump applications like pool pumps, carbonator pumps, and close-couple pumps. Motor features are driven by the application and move water and gases.

STEP 3: SELECT THE SPECIFIC MOTOR

Match the information gathered in Step 1.



Thermal Protection Information

Motors that start automatically (e.g. thermostat controlled) after tripping and that are located out of operator sight must be protected against dangerous overheating due to failure-to-start or overloading.

This protection may be a separate overcurrent device (e.g. motor starter) complying with Article 430 of the National Electrical Code (NEC), a thermally protected motor (internal motor protection), or an impedance-protected motor.

Motors with automatic reset thermal protection MUST NOT be used where automatic or otherwise unexpected starting of the motor could be hazardous. Applications where automatic restarting could be hazardous include compressors, conveyors, power tools, farm equipment, and some fans and blowers. Where such a hazard exists, always use a manual reset, thermally protected motor.

UL 507 Standard

Any motor used in a fan product, such as bathroom exhaust fans, wall-insert fans, ceiling-insert fans, attic-exhaust fans, whole-house fans, and duct fans, etc., which are built into or within the building structure and which are likely to operate unattended or in situations in which the operator may not detect a locked rotor (stalled motor) condition, must have either a manual reset thermal protector or a thermal cutoff (1-shot) device.

Range hoods, circulating fans, pedestal fans, and ceiling-suspended fans are not included. Agricultural fans are included if they are built into the building structure and are likely to operate unattended or in situations in which the person operating the fan may not detect a locked rotor (stalled motor) condition; they must have either a manual reset thermal protector or a thermal cutoff (1-shot) device.

Premium Efficiency vs. Standard Efficiency

If you operate a 25 HP premium efficiency motor at full load for 24 hr. a day (8760 hr. per yr.) and your cost per kilowatt hr. is 9 cents, you can save $532.00 annually.

This comparison is based on a premium efficiency motor with a 94.1% efficiency rating vs. a high efficiency motor with a 91.0% efficiency rating.

Increased efficiency leads to lower operating temp., resulting in longer life.

Cool Operation: The life of an insulation system doubles for each 10°C reduction in operating temp.

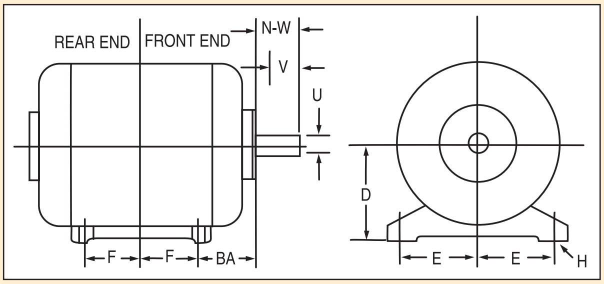
Longer Bearing Life: The lower the temp., the longer the bearing grease will last.

Annual Savings = $0.746 \times HP \times L \times C \times N \left(\frac{100}{E_1} - \frac{100}{E_2}\right)$

HP = Motor Horsepower
L = Percent Load Divided by 100
C = Energy Cost, Dollars per kW Hr.
N = Running Time, Hr. per Yr.
E1 = Efficiency (%) of Standard Efficiency Motor
E2 = Efficiency (%) of Premium Efficiency Motor

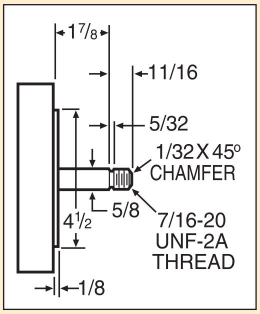
Motor Dimensional Chart

Standardized motor dimensions—established by the National Electrical Manufacturers Association (NEMA)—are tabulated below and apply to all base-mounted motors listed herein that carry a NEMA frame designation.

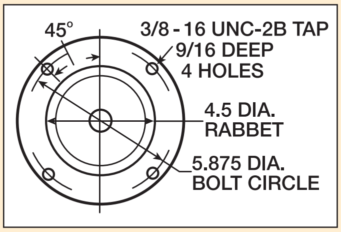


NEMA C- AND J-FACE MOUNTING DIMENSIONS

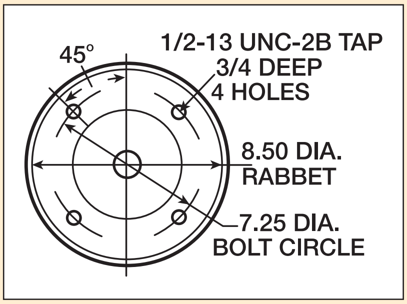
Mounting dimensions of the 56J-Face are exactly the same as the NEMA 56C. 56J-Face has a threaded shaft of stainless steel while all others have a keyed steel shaft. See illustrations and table below for specifics.



56J SHAFT



56C, 56HC, 56J, 143TC AND 145TC – FACE DIMENSIONS



182TC THRU 256TC – FACE DIMENSIONS

NEMA Face	Shaft Dia. (U)	Shaft Long (N-W)	Rabbet Dia.	Bolt Circle Dia.
42C	⅜	1⅛	3	3¾
48C	½	1½	3	3¾
56C	⅝	1⅞	4½	5⅞

449TS	11	18	25	7½		4¾ ^	2⅜ ^	4½ ^	⅝	⅝	3 ^

* Dimension "D" will never be greater than the above values on rigid mount motors, but it may be less so that shims up to 1/32" thick (1/16" on 364U and 365U frames) may be required for certain machines.

‡ Designated 56H motors have 2 sets of 2F mounting holes—3" and 5".

^ Standard short shaft for direct-drive applications.

\# Discontinued NEMA frame.

** Base of Dayton 56HZ frame motors has holes and slots to match NEMA 56, 56H and 145T mounting dimensions.

† Certain NEMA 56Z frame motors have ½" dia. x 1½" long shaft with 3/64" flat." These exceptions are noted in this catalog.

§ Dimension "V" is shaft length available for coupling, pinion, or pulley hub—this is a minimum value.

§§ The 2F dimension is 20.

NEMA Letter Designations Following Frame Number

C: Face-mount; see this page.

H: Designated 56H motors have 2 sets of 2F mounting holes—3" and 5".

J: Face-mount for jet pumps; see this page for dimensions.

K: Has hub for sump pump mounting; see column at left for dimensions.

M, N: Flange mount for oil burner; see page 59.

T, U: Integral HP motor dimension standards set by NEMA in 1964 and 1953.

V: Vertical mount.

Y: Nonstandard mounting; see manufacturer's drawing for mounting dimensions.

Z: Nonstandard shaft (N-W+U dimensions); see manufacturer's drawing for shaft dimensions.

IEC (International Electrotechnical Commission)

ENCLOSURES

- IEC uses numbers to denote a particular enclosure type
- The numbers follow the letters IP (Ingress Protection) in the motor description
- The first digit signifies, on a rating scale, how well-protected the motor is against entry of solid objects such as dust, wire, tools, or fingers
- The second digit signifies, on a rating scale, the motor's ability to protect against water entry

Common Enclosure Ratings

IP 22 - Open Dripproof Motors

IP 44 or 54 - Totally Enclosed (NEMA 12)

IP 45 - Weatherproof Motors

IP 55 - Washdown-Duty Motors

Common Motor Applications

IC 01 - NEMA Standard Open Motors

IC 40 (IC 410) - Totally Enclosed, Nonvented

IC 41 (IC 411) - Totally Enclosed, Fan-cooled

IC 48 (IC 418) - Totally Enclosed, Air Over

Efficiency Ratings

IEC uses the following ratings to designate motor efficiencies:

IE2 = Meets Epact levels

IE3 = Meets NEMA Premium

IE4 = Exceeds NEMA Premium

* Shaft dimensions of these motors may vary among manufacturers. † No NEMA equal.

2015 Energy Conservation Standards For Small Electric Motors

2015 SMALL MOTOR LEGISLATION

Energy efficiency is becoming more important for electric motors used in industrial, commercial, and residential applications. The U.S. Department of Energy (DOE) has established new standards for certain types of small electric motors that will become effective on March 9th, 2015 (March 9th, 2017 for motors that require listing or certification). The motors governed under the small motor ruling include NEMA General Purpose two digit frames 42, 48, and 56, open construction, continuous duty, 1/4 horsepower up through 3 horsepower in 3-phase, capacitor start induction run and capacitor start capacitor run designs. The small motor rule also includes metric designs built in IEC frames 63, 71, or 80, and kilowatt ranges from .18 kW to 2.2 kW. See tables for standard efficiency levels.

Table I.1—Standard Levels for 3-Phase Small Electric Motors

HP/kW	6-Pole (1200 RPM)	4-Pole (1800 RPM)	2-Pole (3600 RPM)
0.25/0.18	67.5	69.5	65.6
0.33/0.25	71.4	73.4	69.5
0.5/0.37	75.3	78.2	73.4
0.75/0.55	81.7	81.1	76.8
1/0.75	82.5	83.5	77.0
1.5/1.1	83.8	86.5	84.0
2/1.5	—	86.5	85.5
3/2.2	—	86.9	85.5

Table I.2—Standard Levels for Capacitor-Start Induction-Run and Capacitor-Start Capacitor-Run Small Electric Motors

HP/kW	6-Pole (1200 RPM)	4-Pole (1800 RPM)	2-Pole (3600 RPM)
0.25/0.18	62.2	68.5	66.6

3/2.2	—	—	84.1

3-Phase Motor 2016 Final IHP (Integral HP) Rule

NEMA Premium

- Replaces Energy Independence and Security Act of 2007
- Takes effect June 1, 2016
- Almost all motors will be covered at Premium Efficiency levels NEMA MG1, Table 12-12 or Part 20, Table B (IE3)
- EISA 2007 Subtype 1 and II, 1-200 HP must now meet Table 12-12-NEMA Premium Efficient
- 56 Frame 3-phase Enclosed motors must now meet Table 12-12-NEMA Premium Efficient
- Custom 3-Phase motors must now meet Table 12-12-NEMA Premium Efficient

3-PHASE MOTORS COVERED UNDER IHP FINAL RULE

- Is a single speed induction motor
- Is rated for continuous duty (MG 1) operation or for duty type S1 (IEC)
- Contains a squirrel-cage (MG 1) or cage (IEC) rotor
- Operated on polyphase alternating current (AC) 60Hz sinusoidal line power
- Has 2-, 4-, 6-, or 8-pole configuration
- Is rated 600V or less
- Have a 3 or 4 digit NEMA frame size (or IEC metric equivalent), including: designs between 2 consecutive NEMA frame sizes (or IEC metric equivalent), or enclosed 56 NEMA frame size (or IEC metric equivalent)
- 2-digit frame size TENV and TEFC motors that are 1.0 HP and larger must also be in compliance.
- Between 1 and 500 HP (or kilowatt equivalent)
- Meets all performance requirements of NEMA design A, B, or C or IEC design N or H electric motor

NEMA Premium Nominal Full-Load Efficiency

Motor Compliance Certification (CC) Numbers

The Department of Energy (DOE) has mandated energy efficiency levels for certain classes of 1- and 3-phase electric motors. For certain categories within these groups of energy efficient motors, a Compliance Certification (CC) number that is unique to a specific motor manufacturer, assigned by the DOE, must appear on the motor's nameplate. The CC number is listed in the Tech Spec section on Grainger.com® for affected motors.

Motor Compliance Certification (CC) Numbers

Dayton Brand	National Brand	
CC005A	CC001A	CC029A
CC029A	CC003A	—
CC030A	CC004A	—
CC060A	CC005A	—

Hazardous Location Motor Temperature Codes

In addition to identifying the Class, Group, and Division of the hazardous location motor, you must also obtain the temperature code or maximum surface temperature for the motor. This code or temperature indicates the maximum surface temperature for all conditions including burnout, overload, single phasing, and locked rotor. The maximum surface temperature or T-Code must be identified on the nameplate.

TEMPERATURE IDENTIFICATION NUMBERS

"T" Number (T-Code On Nameplate)	Max. Temp. (For All Conditions)		"T" Number (T-Code On Nameplate)	Max. Temp. (For All Conditions)	
T1	450°C	842°F	T3A	180°C	356°F
T2	300°C	572°F	T3B	165°C	329°F
T2A	280°C	536°F	T3C	160°C	320°F
T2B	260°C	500°F	T4	135°C	275°F
T2C	230°C	446°F	T4A	120°C	248°F
T2D	215°C	419°F	T5	100°C	212°F
T3	200°C	392°F	T6	85°C	185°F

National Electrical Code Explosive Atmosphere Classifications

Certain locations are hazardous because the atmosphere may contain gas, vapor, or dust in explosive quantities. The National Electrical Code (NEC) divides these locations into Classes and Groups according to the type of explosive agent which may be present. Listed are some of the agents in each classification. For a complete list, see NFPA (National Fire Protection Association) publication 497M.

Underwriters Laboratories tests motors and other devices for safety in explosive atmospheres, and publishes a list of those products that meet its standards for each Class and Group.

Use of UL Listed devices does not necessarily make an installation conform to the NEC or local codes. Consult Chapter 5 of the NEC, local building codes, OSHA requirements, and insurance inspectors for detailed data as to proper procedures. This catalog does not contain any motors designed for Class I, Groups A or B atmospheres.

CLASS I

Group A: Acetylene

Group B: Butadiene, ethylene oxide, hydrogen, propylene oxide, manufactured gases containing more than 30% hydrogen by volume

Group C: Acetaldehyde, cyclopropane, diethyl ether, ethylene

Group D: Acetone, acrylonitrile, ammonia, benzene, butane, ethanol, ethylene dichloride, gasoline, hexane, isoprene, methane (natural gas), methanol, naphtha, propane, propylene, styrene, toluene, vinyl chloride, xylene

CLASS II

Group E: Aluminum, magnesium, and other metal dusts with similar characteristics

Group F: Carbon black, coke, or coal dust

Group G: Flour, starch, or grain dust

CLASS III

Easily ignitable fibers, such as rayon, cotton, sisal, hemp, cocoa fiber, oakum, excelsior, and other materials of similar nature

Motor Terminology

AC—Alternating Currents

Amb. (Ambient)—The temp. of the space around the motor.

Auto—Automatic

Bearings—Basic types:
- **Sleeve—**Preferred where low noise level is important, as on fan and blower motors. Unless otherwise stated, sleeve bearing motors listed herein can be mounted in any position, including shaft-up or shaft-down (all-position mounting).
- **Ball—**Used where higher load capacity is required or periodic lubrication is impractical. The 2 methods used to keep out dirt are: shields and seals.

CSA—Canadian Standards Association

DC—Direct Current

Enclosure—The motor's housing. Types:
- **Open Dripproof (ODP)—**Ventilation openings in endshields and shell placed so drops of liquid falling within 15° from vertical will not affect performance. Usually used indoors, in fairly clean locations.
- **Open Air-Over (OPAO)—**Motors intended for fan and blower service. Must be located in the driven fan blade's air stream to provide motor cooling.
- **Totally Enclosed Air-Over (TEAO)—** Air flow from driven or external device provides cooling air flow over the motor, but not airtight or waterproof.
- **Totally Enclosed Fan-Cooled (TEFC)—** Includes an external fan in a protective shroud, to blow cooling air over the motor, but not airtight or waterproof.
- **Totally Enclosed Nonventilated (TENV)—**Not equipped with an external cooling fan, but not airtight or waterproof. Depends on convection air for cooling.

Energy Efficient—Any motor that has improved efficiency performance above a standard design as determined by the manufacturer, i.e., Epact levels in compliance with NEMA Table 12-11, but does not qualify for a NEMA Premium designation and or a small motor energy legislation model because the motor cannot meet the Federal and/or NEMA nominal efficiency guidelines, will be categorized as "Energy Efficient."

FLA (Full Load Amps)—Line current (amperage shown on motor nameplate) drawn by a motor when operating at rated HP and voltage.

Hz (Hertz)—Frequency, in cycles per sec., of AC power; usually 60 Hz in USA, 50 Hz overseas.

HP (Horsepower)—The amount of work a motor can do. 1 HP equals 746 watts.

Imp.—Impedance

Ins. (Insulation)—In motors, usually classified by max. allowable operating temp.: Class A-105°C (221°F), Class B-130°C (266°F), Class F-155°C (311°F), Class H-180°C (356°F).

Man.—Manual

Max.—Maximum

MFD—Microfarad

μF—Microfarad

Min.—Minimum

Mtg. (Mounting)—Basic types
- **Bolted—**Frame is attached to motor with removable bolts.
- **C-Face or Flange—**Shaft end has a flat mounting surface, machined to standard dimensions, with holes to allow easy, secure mounting to driven equipment. Commonly used on jet pumps, oil burners, and gear reducers.
- **Cradle/Resilient**—Motor shell is isolated from base by vibration-absorbing material, such as rubber rings on the endshields, to reduce transmission of vibration to the driven equipment.
- **Rigid—**Motor solidly fastened to equipment through metal base that is welded to, or cast into, motor shell.
- **Stud—**Motor has bolts extending from front or rear, by which it is mounted. Often used on small, direct drive fans and blowers.
- **Yoke—**Tabs or ears are welded to motor shell to allow bolting of motor to a fan column/pedestal or bracket.

Nameplate RPM—The nominal speed at which an induction motor operates under rated load (HP) conditions.

NEMA—National Electrical Manufacturer's Association

NEMA Premium Efficient—Any 3-phase motor that meets NEMA MG1 Table 12-12 Nominal Premium Efficiency Levels for a particular HP, rpm, and enclosure type rating and is required to display a CC Number on the nameplate, as registered with the Department of Energy, or single-phase motor that meet EISA standards, i.e. small motor rule, that are not required to display a CC Number, but do have the NEMA logo on the nameplate will be categorized as "NEMA Premium Efficient".

Nom.—Nominal

OC—On Center

PE—Pump end

Premium Efficient—For 2-digit open enclosure, single and 3-phase motors that meet EISA standards, i.e. small motor rule, that are not required to display a CC Number on the nameplate, will be categorized as "Premium Efficient".

Prot.—Protection

PSC—Permanent Split Capacitor

Resil.—Resilient

Rev.—Reversible

Rotation—Basic types:
- **CCW—Counterclockwise**
- **CW—Clockwise**
- **CW/CCW—Reversible**
- **CWSE—Clockwise Facing Shaft End**
- **CWLE—Clockwise Facing Lead End**
- **CCWSE—Counterclockwise Facing Shaft End**
- **CCWLE—Counterclockwise Facing Lead End**

RPM—Revolutions per Minute

SF (Service Factor)—A measure of the reserve margin built into a motor. Motors rated over 1.0 SF have more than normal margin, and are used where unusual conditions such as occasional high or low voltage, momentary overloads, etc. are likely to occur.

Severe Duty—A totally enclosed motor with extra protection (shaft slinger, gasketed terminal box) to resist entry of contaminants. Used in extra dirty, damp or other nonhazardous contaminated environments.

Syn.—Synchronous

Standard Efficient—Any motor not required to meet any specific called out nominal efficiency specifications including federal guidelines will be categorized as "Standard Efficient".

Temperature Rise—The amount by which a motor, operating under rated conditions, is hotter than its surroundings.

Thermal Protection—A temp. sensing device built into the motor that shuts off the motor if the temp. becomes excessive due to failure-to-start or over-loading. Basic types:
- **Auto (Automatic-Reset)—**After motor cools, thermal protector automatically connects motor to power.
- **WARNING: Should not be used where unexpected restarting would be hazardous.**
- **Imp (Impedance Protected)—**Motor is designed so that it will not burn out in less than 15 days under locked rotor (stalled) conditions, in accordance with UL standard No. 519.
- **Man. (Manual-Reset)—**An external button must be pushed to reconnect power to motor. Preferred where unexpected restarting would be hazardous, as on saws, conveyors, compressors, etc.
- **T-Stat (Thermostat)—**A temperature-sensing device installed inside the motor with separate leads brought out for connection into motor starter coil (control) circuit. Under failure-to-start or overload conditions, thermostat contacts will open. Thermostat contacts will reclose automatically when motor cools.

Torque—Twist, or turning ability, as applied to a shaft. Measured in foot-pounds (ft.-lb.), inch-pounds (in.-lb.), ounce-feet (oz.-ft.) or ounce-inches (oz.-in.).
- **Breakdown—**The maximum torque a motor will produce while running, without an abrupt drop in speed and power.
- **Locked Rotor or Starting—**The maximum torque produced at initial start.

Insulation Classes and Temperature Rise

Heat is a byproduct of the operation of a motor. A motor's internal operating temp. depends on its design.

Insulation classes are designated to meet the requirements of the motor design. The insulation class is determined by the ability of each insulation system to handle a specified amount of heat:

Class A: 105°C (221°F)
Class B: 130°C (266°F)
Class F: 155°C (311°F)
Class H: 180°C (356°F)

A newer design of general purpose 3-phase motors has been introduced to promote longer service life. These motors feature a higher insulation class (primarily Class F) with a lower temp. rise (primarily Class B rise). This allows for about 25°C reserve thermal capacity in the motor. The reserve thermal capacity is what helps maintain the integrity of the insulation and lengthen motor life.

Open Dripproof with Cradle Base-Mount 5K283

Totally Enclosed Fan-Cooled with Rigid Base-Mount 6XJ06

Split-Phase NEMA Frame Cradle & Rigid Base-Mount Motors

- Rotation: CW/CCW
- Bearings: ball
- Max. ambient temp.: 40°C

These motors power fans, pumps, blowers, small conveyors, and other low- to medium-torque applications.

** 60/50 Hz. † Cradle base has 48/56 mounting holes. ‡ Cradle with studs in a 3⅝" square pattern. # Cradle with studs in a 4 1⁄16 square pattern. ** Cradle with studs in a 4 3⁄16" square pattern. †† Supplied with ⅝"-dia. shaft bushing. ‡‡ Supplied with a relay switch instead of a centrifugal switch.*

Capacitor-Start NEMA Frame Cradle & Rigid Base-Mount Motors

- Rotation: CW/CCW
- Bearings: ball
- Max. ambient temp.: 40°C

Provide additional power during startup for medium- to high-torque requirements in conveyor, shop tool, ventilation, or pump applications.

Capacitor-Start/Run NEMA Frame Face- & Face/Base-Mount Motors

2015 SMALL MOTOR LEGISLATION

- Number of Speeds: 1
- Rotation: CW/CCW
- Bearings: ball
- Max. ambient temp.: 40°C

These motors run with higher operating efficiency than standard capacitor-start motors. They power medium- to high-torque applications such as air conditioners, conveyors, fans, or pumps.

** 60/50 Hz. † Cradle with studs in a 4 3/16" square pattern. ‡ Complies with 2015 efficiency legislation for small-frame motors; see page 5 for more information.*

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

Open Dripproof with Steel Frame 20CL66

Totally Enclosed Fan-Cooled with Cast Iron Frame 6AHZ7

Dayton · WEG · NEMA Premium · 2015 Small Motor Legislation

3-Phase NEMA Frame Rigid Base-Mount Motors

- Rotation: CW/CCW
- Thermal protection: none
- Insulation: Class F motors have Class B temperature rise for longer life
- Bearings: ball (Weg models are regreasable on 254T frame and above)
- Max. ambient temp.: 40°C
- Usable at 208V

These motors power pumps, ventilation equipment, machine tools, and other industrial equipment. They operate with a higher torque and greater efficiency than single-phase models of the same HP, rpm, and frame size. Not for cooling towers.

marathon Motors NEMA Premium

3-Phase NEMA Frame Rigid Base-Mount Motors with Aegis Rings

- Totally enclosed fan-cooled
- Rotation: CW/CCW
- Thermal protection: none
- Voltage: 230/460
- Service factor: 1.15
- Inverter rated
- Bearings: ball
- Max. ambient temp.: 40°C
- 1-yr. warranty

Bearing protection rings provide a grounding path to divert currents away from bearings to ground. Design prevents bearing fluting damage for motors controlled by variable frequency drives. Cast-iron frame. Suitable for use on blowers, compressors, conveyors, pumps, and other machinery in dirty and dusty environments.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

Open Dripproof with Face/ Base-Mount 31LH59

Totally Enclosed Fan-Cooled with Face-Mount 3N841

3-Phase NEMA Frame Face- & Face/Base-Mount Motors

- Rotation: CW/CCW
- Thermal protection: none
- Bearings: ball
- Max. ambient temp.: 40°C
- Warranty: 1 yr. on Dayton and Marathon; 3 yr. on Weg
- Usable at 208V

These motors power pumps, ventilation equipment, speed reducers, machine tools, and other shaft-end-mounted industrial equipment. They operate with a higher torque and greater efficiency than single-phase models of the same HP, rpm, and frame size.

- Bearings: ball
- Max. ambient temp.: 40°C

These motors power compressors, conveyors, fans, and pumps that require International Electrotechnical Commission (IEC) electrical standards. They meet a standard set of electrical, dimensional, and performance requirements based on kilowatt (kW) ratings. They operate with a higher torque and greater efficiency than single-phase models of the same HP, rpm, and frame size.

marathon™ Motors

1-Phase Close-Coupled Pump Motors

- Rotation: CW/CCW
- Thermal protection: none
- Mounting: face/base
- Max. ambient temp.: 40°C

Motors are continuous-duty and for use in commercial and industrial pumping applications. TEFC motors are suitable for use in dirty, dusty, and nonhazardous applications.

WEG marathon™ Motors NEMA Premium

3-Phase Close-Coupled Pump Motors

- Rotation: CW/CCW
- Thermal protection: none
- Insulation: Class F, with B temperature rise for longer life
- Inverter rated
- Efficiency group: NEMA Premium
- Mounting: face/base
- Max. ambient temp.: 40°C

For use in water pumping, process, transfer, and circulating pumps. TEFC motors are designed for severe-duty applications.

Note: Find higher HP models on Grainger.com.

IMPORTANT MOTOR INFORMATION Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

1-Phase Jet Pump Motors

- Thermal protection: auto
- 60 Hz, except 2K650 is 60/50 Hz
- Insulation: Class B
- Mounting: horizontal or vertical, shaft down
- Bearings: ball
- Motor: capacitor-start, except where noted

Shaft slinger (all models) and gasketed conduit box (TEFC models only) protect against moisture and contaminants.

56C frame shaft: ⅝" dia. x 1⅞"L, 3⁄16"-wide keyway.

56J frame shaft: stainless steel, 7⁄16-20 UNF-2A, RH threaded 11⁄16" from end, 27⁄16" length. Use in jet pump water systems, centrifugal and hydraulic pumps, and other applications requiring NEMA 56C- or 56J-face mounting.

Note: Must equal or exceed service factor and HP for proper replacement.

Marathon—2-compartment design with locked ball bearings on shaft end. Voltage-change plug and enlarged conduit box for easy terminal lead connection. 56C frame has 416 stainless steel shaft.

Dayton—Single-compartment design. 56C frame has carbon steel keyed shaft. ½-HP and higher motors include drip cover kit for vertical mounting.

3-Phase Jet Pump Motors

- 56J frame
- Thermal protection: none
- Bearings: ball
- Max. ambient temp.: 40°C

Shaft: stainless steel, 7⁄16-20 UNF-2A RH threaded 11⁄16" from end, 27⁄16"L. Open dripproof models have a shaft slinger.

Dayton motors will operate at 50 Hz on 190/380V at 5/6 of 60 Hz HP and rpm. For use in industrial, commercial, centrifugal, and hydraulic pumps.

Note: Must equal or exceed service factor and HP for proper replacement.

Century®

1-Phase and 3-Phase Square-Flange Pool Pump Motors

- Enclosure: open dripproof
- Mounting: flange, horizontal only
- Bearings: ball

Motors are equivalent replacements for most popular pool and spa manufacturers' pumps. Permanent split capacitor and 3-phase motors are single-compartment design. Capacitor-start/run motors are 2-compartment design.

Shaft: 303 stainless steel, ½-20 UNF-2A RH external threads.

Additional square-flange pump motors are available on Grainger.com.

Note: Must equal or exceed service factor and HP for proper replacement.

56J Frame, Permanent Split Capacitor

Century®

1-Phase Face-Mount Pool Pump Motors

- Enclosure: open dripproof
- Insulation: Class B
- Rotation: CCWSE
- Bearings: ball
- Thermal protection: auto

Motors are equivalent replacements for most popular pool and spa pump manufacturers' pumps. Sealed switch design prevents water infiltration. Moisture/heat-resistant bearing lubricant.

56C frame shaft: keyed steel, ⅝" dia. x 1⅞"L with 3⁄16"W keyway.

56J frame shaft: 303 stainless steel, 7⁄16-20 UNF-2A RH threaded 11⁄16" from end.

Note: Must equal or exceed service factor and HP for proper replacement.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

Split-Phase Carbonator Pump Motors

- Enclosure: open dripproof
- Thermal protection: auto
- Bearings: ball
- Max. ambient temp.: 40°C

Motors have a threaded conduit hole. Short, slotted shaft permits close-coupling the carbonator pump to the motor. Extended hub for direct-mounting pump to motor. Use for liquid transfer pumps, vending machine pumps, and other hub-mounted pump applications. See page 2698 for an assortment of suitable pumps.

Dayton LEESON

NEMA Frame 12, 24, 90, and 180VDC Permanent Magnet Motors

- Rotation: CW/CCW
- Service factor: 1.0
- Mounting: Face/base
- Bearings: ball
- Max. ambient temp.: 40°C

Designed for use with speed controls or NEMA Type K DC power supplies on constant or diminishing torque applications. Performance matched with Dayton and Dart Speed Controls found on page 159. Dayton 90V and 180V models feature a tapped hole on the fan end shaft to mount a 6Z392 or 5JJ65 pulse generator found on page 159. 56C frame models have a removable base. All motors are designed for mechanical loads and for hard-to-start applications such as conveyors, belt-driven equipment, machine tools, and reciprocating pumps.

Dayton

90 and 180VDC Permanent Magnet Motors with Control

4Z248

- Enclosure: totally enclosed fan-cooled, NEMA 1 control
- Rotation: CW/CCW
- Insulation: Class F
- Mounting: C-face with removable rigid base
- Bearings: ball
- Max. ambient temp.: 40°C
- Input: 115 or 230VAC, 60/50 Hz (4Z226 requires 250V, 20A receptacle)
- 50:1 control speed range

Control regulates speeds within 1% of nameplate rpm and provides full-wave rectification with adjustable min./max. speed, current/torque limit, IR compensation, fixed acceleration, transient and surge protection, and front-panel fuse protection.

WEG marathon Motors NEMA Premium

Severe-Duty 3-Phase IEEE 841 NEMA Premium Efficient Motors

- Enclosure: totally enclosed fan-cooled
- Rotation: CW/CCW
- Thermal protection: none
- 460V
- Service factor: 1.25 for Weg; 1.15 for Marathon
- Insulation: Weg are Class F with B temp. rise for longer life; Marathon are H (except 19RV44 is F)
- Inverter rated
- Frame material: cast-iron
- Bearings: ball
- Max. ambient temp.: 40°C

Designed for dusty, dirty, nonhazardous applications, and especially suited for pulp, paper, and steel mills, petrochemical, and applications requiring severe-duty long-life motors. Internal and external corrosion-resistant finish with stainless steel nameplate. Nonsparking fan. Weg motors feature Inpro-seal on drive end, and 50,000-hr. extended bearing life. All meet or exceed IEEE 841-2009 specification and all NEMA Premium/CEE requirements for energy efficiency.

1-Phase Hazardous Location Motors

marathon Motors

- Enclosure: totally enclosed fan-cooled, except where noted
- Rotation: CW/CCW
- Thermal protection: auto, except thermostat for 2NLE6
- Bearings: ball
- Max. ambient temp.: 40°C

Motors have sturdy rolled-steel frames and meet the National Electrical Code for hazardous locations. Unmounted conduit box is included with all 56-frame motors. Use to power fans, blowers, pumps, or air compressors in areas that meet the National Electrical Code for hazardous locations.

Note: For assistance with hazardous location classification, see page 6.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

For assistance with motor selection, see pages 3 to 7.

3-Phase NEMA Premium Efficient Cooling Tower Motors

WEG NEMA Premium

- Enclosure: totally enclosed fan-cooled
- Rotation: CW/CCW
- Thermal protection: none
- Service factor: 1.25
- Insulation: Class F, with B temperature rise for longer life
- Inverter rated
- Mounting: rigid base
- Frame material: cast-iron
- Bearings: ball
- Max. ambient temp.: 40°C
- Usable at 208V
- Space heater included
- Warranty: 3 yr.

Durable synthetic enamel alkyd resin paint resists corrosion. V-ring slingers and umbrella seal on both endshields protect bearings from moisture and contaminants. Multiple endbell drains provide for shaft-up, -down, or -horizontal mounting. Include threaded conduit box with automatic drain and rubber lead separators at the motor frame. Stainless steel laser-etched nameplate maintains information over long life. Suitable for operation in 100% humidity and corrosive environments. For use in cooling tower applications where the motor is mounted in the airstream. Meet IP55 enclosure rating.

Note: Motors are suitable for use at 50 Hz at rated HP and 1.25 service factor.

Dayton

1- and 3-Phase Stainless Steel Washdown Motors

- Rotation: CW/CCW
- Thermal protection: none, except 12V772 and 12V775 are auto
- Insulation: Class F
- Bearings: ball
- Max. ambient temp.: 40°C

Feature exterior components of 300 Series stainless steel for maximum corrosion resistance in severe-duty and washdown environments. Motors are well-sealed against moisture and condensation to protect internal components, and exteriors are completely paint- and coating-free. Heavy polyester insulating varnish applied to the windings for extra moisture and corrosion resistance. Moisture-resistant sealant between frame and endbells. Double-sealed oversized bearings with rust-inhibitive grease. Shaft-end bearing is locked internally to limit axial endplay. 4 drains in each endshield allow drainage of condensation in any mounting position. 1-phase models are built to comply with NEMA MG1-1.26.6. All motors are for use in the food processing, chemical processing, and beverage industries.

3-Phase Wet Environment/Car Wash Motors

- Enclosure: totally enclosed fan-cooled
- Rotation: CW/CCW
- Insulation: Class F
- Mounting: face
- Bearings: ball
- Max. ambient temp.: 40°C

Use when frequent high-pressure washdown is required. Motors feature 303 stainless steel shafts with contact lip seal and V-ring slinger.

1-Phase Painted Washdown Motors

- Rotation: CW/CCW
- Thermal protection: auto on PSC motors; none on capacitor-start
- Insulation: Class F
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous

Built to comply with NEMA standard MG1-1.26.6 for washdown motors. 303 stainless steel shaft. V-ring rotating seal. Double-sealed, oversize bearings and spring-loaded contact seals in each endshield are lubricated with moisture-resistant grease. Conduit boxes have drains to shed excess moisture. White epoxy finish for superior resistance to caustic cleaning solutions. For high humidity/wet environments and areas where motor is occasionally exposed to high-pressure washdowns. USDA Approved paint finish.

Built to comply with NEMA standard MG1-1.26.6 for washdown motors. Features 303 stainless steel shaft and V-ring rotating seal. Double sealed, oversized bearings and spring-loaded contact seals in each endshield are lubricated with moisture-resistant grease. Conduit boxes have drains to shed excess moisture. White epoxy finish resists caustic cleaning solutions. For use in high humidity, wet environments or where motor is occasionally exposed to high-pressure washdowns. Brake motors are suitable for use in drives for conveyors, food packaging and processing equipment. USDA Approved paint finish.

Dayton NEMA Premium

3-Phase Painted Washdown Motors

- Rotation: CW/CCW
- Thermal protection: none
- Insulation: Class F
- Inverter rated
- Bearings: ball
- Max. ambient temp.: 40°C

NEMA premium efficient motors built as washdown motors. Copper windings are cured in protective polyester compound. 303 stainless steel shaft. V-ring rotating seal. Double-sealed, oversize bearings and spring-loaded contact seals in each endshield are lubricated with moisture-resistant grease. Conduit boxes have drains to shed excess moisture. Bearing cavities are packed to help keep moisture out. White epoxy finish provides superior resistance to caustic cleaning solutions. For high humidity/wet environments and areas where motor is occasionally exposed to high-pressure washdowns. USDA Approved paint finish.

90 and 180VDC Painted Washdown Motors

- Enclosure: totally enclosed fan-cooled
- Service factor: 1.0
- Insulation: Class H
- Bearings: ball
- Max ambient temp.: 40°C
- Duty: continuous

Designed for use with speed controls or NEMA Type K DC power supplies on constant or diminishing torque applications. Motors feature externally replaceable brushes and removable bases. Suitable for use in drives for conveyors, food packaging and processing machinery where high humidity and wet environments exist, or where washdown procedures are used.

• Replacement brushes available on Grainger.com

High-Torque and Extra-High-Torque Farm-Duty Motors

- Enclosure: totally enclosed fan-cooled
- Rotation: CW/CCW
- Thermal protection: manual
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous
- Motor shaft design: keyed

Features include gasketed conduit box and a capacitor cover; a rubber boot over the manual protector reset button seals the motor against weather and contaminants. Oversized conduit boxes make connections easier. Shaft slinger included. For use with conveyors, silo unloaders, barn cleaners, compressors, and manure pumps. Extra-High-Torque motors have up to 400% starting torque for extremely hard-starting applications and can start under full-load conditions.

1-Phase Auger Farm-Duty AC Motors

- Rotation: CW/CCW
- Thermal protection: manual
- Insulation: Class B
- Bearings: ball
- Max. ambient temp.: 40°C

Guard on rotary switch protects against high-speed back-drive condition. Mounting flange assembles directly to gearbox on auger-drive systems. Capacitor-start models have shaft extensions beyond fan guard for hand cranking. Suitable as a replacement for Chore-Time, Cumberland, GSI, and other new and replacement OEM equipment.

Dayton® marathon™ Motors

Poultry/Livestock Direct-Drive Farm-Duty AC Fan Motors

- Max ambient temp.: 40°C

Motors feature shaft slinger. For fan duty only. Direct replacements for Acme, Aerotech, Dayton®, GSI, LB White, and other direct-drive poultry fans. PSC and Capacitor Start/Run motors also have gasketed capacitor covers.

Dayton® marathon™ Motors Century®

Poultry/Livestock Belt-Drive Farm-Duty AC Fan Motors

- Phase: Single
- Rotation: CW/CCW
- Thermal protection: auto
- Insulation: Class B
- Max. ambient temp.: 40°C

Motors have higher service factors and breakdown torque for the most-demanding applications. Feature shaft slinger, gasketed capacitor, and conduit box cover for added protection against dirt and moisture. Motors also have double-sealed bearings, condensation drain holes, and cooler-running windings to promote longer service life. For use in Dayton®, Aerotech, American Coolair, Chore Time, Acme, Hired Hand, and other air-over belt drive livestock ventilation fans.

Aeration Farm-Duty AC Fan Motors

Dayton®

- Rotation: CW/CCW
- Service factor: 1.0
- Insulation: Class B
- Mounting: rigid base
- Max. ambient temp.: 50°C

Use as a replacement motor for tubeaxial fan grain aeration systems made by Aero-Vent, Dynavent, Farm Fan, and other manufacturers. Permanent split capacitor motors have keyed shaft that is drilled on center 1"D, and tapped ¼-20 UNC to allow fan mounting.

54JF83 45YU16 13L299

1-Phase Air Compressor Motors

- Enclosure: open dripproof
- Mounting: rigid base
- Bearings: ball
- Max. ambient temp.: 40°C

Direct replacements for selected air compressors including Dayton, Speedaire, Ingersoll-Rand, Campbell Hausfeld, Sanborn, Champion, Coleman, Quincy, and others. Designed to meet the high-torque requirements of air compressor loads. Mechanical features provide long life in high-tension, belt-type loads, which typically shorten motor life. High breakdown torque ensures dependable service. Suitable for intermittent-duty, portable, and stationary air compressors.

Note: Use on other applications voids warranty.

Universal AC/DC Motors

- Enclosure: open dripproof
- 115VAC at 60 Hz
- Insulation: Class A, except 2M139 is Class F
- Max. ambient temp.: 40°C

Lightweight, compact, and use AC or DC power to operate portable power tools such as drills, sanders, routers, circular saws, and jig saws. They can operate at extremely high speeds with a high starting torque. Full-load speeds can be adjusted 20% to 100% with proper speed control (sold separately).

5FTT3

3.3"-Dia. Shaded-Pole Vibrator Motor

- Mounting: face
- Max. ambient temp.: 40°C

Low starting torque provides a smooth and quiet start up and promotes material flow in bins, chute hoppers, or pipes and can be used to cause materials to release from the walls of a container. Equipped with 9-ft. 3-cond. cordset and inline On/Off switch. Bracket mounting holes are ⅞" x 3" O.C.; includes bolt and nut to secure to motor.

Vacuum Motors

AMETEK LAMB ELECTRIC · Dayton

- Enclosure: open
- Thermal protection: None, except where noted
- Mounting: all-position
- Bearings: ball, permanently lubricated
- Max. ambient temp.: 40°C, except 413W26 is 50°C
- Duty: intermittent
- Avg. brush life (Ametek only): 4.3" and 5.7" dia., 500 hr. (except 413W26 is 800 hr.); 7.2" dia., 700 hr.; 7.5" dia., 1000 hr.; 8.4" dia., 1500 hr.

For use in moving clean and dry air. Motor should not come into contact with foam, liquids, or moisture-laden air. Use with applications that protect the motor's electrical components, fan system, and housing. Units with air-sealed bearings provide added protection against dirt and moisture. Units with thermoset mounting brackets are for light-duty applications. For use in commercial canister or utility vacuums, sprayer/foggers, material handling and transfer systems, and car wash and central vacuum systems.

Note: Additional sizes available on Grainger.com®.

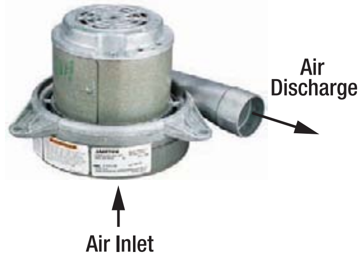
** Air-sealed bearing protection. † Auto thermal protection; all others have none.*

PERIPHERAL DISCHARGE

Air flows into the bottom of the motor and is discharged through vents in the motor.



TANGENTIAL DISCHARGE

Air flows into the bottom of the motor and is discharged through an air tube on the side of the motor.

THRU-FLOW DISCHARGE

Air flows into the bottom of the motor and is discharged through the top of the motor to provide cooling.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

5.7"-Dia. Tangential Bypass Brushless Blowers

- Enclosure: open
- Thermal protection: auto
- Mounting: tab, all-position
- Bearings: ball
- Max. ambient temp.: 50°C

Adjustable, built-in speed control makes a secondary pressure control device unnecessary. An external hose is easily attached to the exhaust tube. Included wiring harness allows hard-wiring to external power. Manually controlled units have easily-adjusted built-in trim-pot. Electronically controlled models require a remote 0 to 10VDC reference signal (not included). For use in business machines, computer peripherals, material handling, air samplers/evacuators, packaging systems, photographic medical equipment, and air beds.

Shaded Pole C-Frame Motors

- No. of speeds: all motors are 1-speed except for 4M075 is 2-speed
- Enclosure: open air-over
- Service factor: 1.0
- Insulation: Class B
- Mounting: all-angle
- Max. ambient temp.: 40°C

For use in small fans and blowers found in bathroom ventilators, range hoods, electric heaters, hair dryers, slide projectors, air cleaners, humidifiers, and refrigeration equipment.

Note: This product is NOT SUITABLE for any unattended equipment (including built-in bathroom exhaust fans), unless the listed Thermal Protection is 1 Shot.

Stud/Hole Mount
- Mounting: two #8-32 studs at shaft end, and mounting holes on each side of the stator, 1 7/8" OC

Stud Mount
- Mounting: two #8-32 studs on 1 7/8" OC
- OEM replacement with 2-prong plug

Hole Mount
- Mounting: two #6-32 threaded holes on 1 7/8" centers
- OEM replacement with OEM plug
- Dual shaft

Shaded Pole Unit Bearing Motors

Dayton

- Enclosure: totally enclosed air-over
- 60/50 Hz
- Service factor: 1.0
- Insulation: Class A
- Mounting: horizontal or vertical shaft up

Use with commercial and industrial HVAC and refrigeration equipment, and other applications with 6" to 12" fan blades. Motors have oil circulation system to help extend the life of motor and bearings, and allow for vertical application.

Kryo SSC ECM Unit Bearing Motors

morrillmotors

- Enclosure: totally enclosed air-over
- Rotation: CWLE
- Thermal protection: electronic
- 60 Hz
- Service factor: 1.0
- Insulation: Class B
- Mounting: rear/foot
- 1/4"-20 threaded shaft
- Plug type: round 2-pin

For use in commercial refrigeration evaporator fan applications and in most applications requiring high efficiency and output ratings between 4 and 25W. Aluminum housing. IP65 compliant.

Output Watts	Nameplate RPM	Voltage	Full Load Amps	Body Dia.	Shaft Length	Length Less Shaft	Max. Ambient Temp.	Mfr. Model	Item No.

ECM Direct-Drive Unit Bearing Fan Motors

- Enclosure: totally enclosed air-over
- Thermal protection: auto
- Insulation: Class A
- Mounting: rear/double foot
- Body dia.: 3½"
- Max. ambient temp.: 40°C
- Plug type: round 2-pin

Suitable for evaporator fans, walk-in coolers and freezers, ice machines, beverage merchandisers, and vending machines. Threaded 1/4-20 shaft. Cast-iron frame. Evaporator-duty only. Include speed nut and mounting screws.

Output Watts	HP	Nameplate RPM	Rotation	Voltage	Full Load Amps	Shaft Orientation	Shaft Length	Length Less Shaft	Mfr. Model	Item No.

Shaded Pole Unit Bearing Motors

- Service factor: 1.0
- Mounting: rear/double foot
- Max. ambient temp.: 40°C
- Duty: continuous
- Shaft orientation: horizontal or up
- Plug type: round 2-pin
- Original OEM replacement motor

Feature precision-machined housing with positive-flow lubrication and a preoiled felt wick for extended use with no reoiling. #8 mounting holes, 2 13/16" OC. 1/4-20 threaded shafts, except 4M159 and 4M160 have 3/8" dia. with flat. 2MY41 has 5/16" dia., and motor leads and shaft exit the same side of housing. For use in commercial and industrial HVAC and refrigeration equipment, and other applications with 6" to 12" fan blades.

Arktic 59 Series 3.3" ECM Direct-Drive Blower Motors

- Enclosure: totally enclosed air-over
- Thermal protection: electronic
- Insulation: Class B
- Mounting: stud
- Bearings: ball
- Max. ambient temp.: 40°C
- Shaft orientation: all-angle
- Plug type: round 2-pin

Feature higher efficiency than standard induction motors for greater energy savings. Can maintain the rated rpm (±6%) independent of static pressure for better air distribution through the refrigeration area. Can be used for replacing shaded pole, PSC, and ECM motors. Suitable for evaporator fan motors used in beverage merchandisers, display cases, freezers, ice machines, vending machines, and walk-in coolers.

EM&S

3.3" EC Walk-In Cooler Evaporator Motors

- Enclosure: totally enclosed air-over
- Thermal protection: auto
- Insulation: Class B (1/15 HP), Class A (1/10 HP)
- Bearings: unit
- Max. ambient temp.: 40°C
- Plug type: round 2-pin

Feature higher efficiency than standard induction motors for greater energy savings. Can maintain the rated rpm (±6%) independent of static pressure for better air distribution through the refrigeration area. Motors can be used for replacing shaded pole, PSC, and ECM motors. Suitable for condenser and evaporator fan motors used in display cases, ice machines, beverage merchandisers, vending machines, walk-in coolers, and freezers.

Dayton

3.3"-Dia. PSC Motors

3RCX2

20HN78

- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Mounting: stud
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous

Deliver higher performance, efficiency, and starting torque than standard 3.3" shaded pole motors. Quick-reversing plug. Studs on both endshields and longer shaft for replacing many OEM motors from Chandler, Climate Control, Heatcraft, Larkin, and others.

FASCO AC MOTORS & BLOWERS

3-in-1 HP 3.3"-Dia. PSC Motor

- Enclosure: open air-over
- Thermal protection: auto
- 60/50 Hz
- Service factor: 1.0
- Insulation: Class B
- Mounting: stud
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous

Open air-over motor replaces 1/12, 1/15, and 1/20 HP PSC and low-efficient shaded pole motors. Quick-reversing plug. Studs on both endshields and longer shaft for replacing many OEM motors from Chandler, Climate Control, Heatcraft, Larkin, and others.

3.3" & 4"-Dia. Shaded Pole Motors

- All motors are 1-speed except 3M549 is 2-speed
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Max. ambient temp.: 40°C
- Duty: continuous

For OEM and replacement use in air-over fan and blower applications such as bathroom fans and range hoods. Internal fan on the totally-enclosed fan-cooled motors makes these motors suitable for mechanical-duty applications such as pumps, diaphragm compressors, laboratory equipment, and business machines. All-steel construction.

3.3"-Dia. Motor Mounting

BLOWER MOUNTING BRACKET SYSTEM

4UFA2—Aluminum stand-off bracket for motor-blower mounting. Kit 4UEZ9 required to mount to motor.

4UEZ9—Special end plate for D401 motor. For mounting to Comfort-Aire units.

Description	Item No.
Blower Mounting Bracket System	
Blower Mounting Bracket	**4UFA2**
Adapter Plate	**4UEZ9**
End Shield System	
3⁵⁄₁₆" Diameter End Shield	**4UFA1**
Mounting Rings, 1¼" I.D., 1¹³⁄₁₆" O.D., Qty. 2	**4UFA8**
Flange Kit	
Motor to Blower Flange	**4UFA4**
Halo Kit	
Triangular Bracket With Grommets	**4UFA3**

END SHIELD SYSTEM

4UFA1—For base mounting. Use with rubber mounting rings 4UFA8.

4UFA8—Henrite rubber mounting rings with steel band. Use with 4UFA1 end shield, cradle bases, and knife edge motor supports.

FLANGE KIT 4UFA4

Used to mount motors to blower housings.

HALO KIT 4UFA3

Motor mounting bracket converts 3.3"-dia. motor to triangular mounting pattern on 4⅜" bolt circle.

4.4"-Dia. Energy Efficient PSC Fan Motors

- Rotation: CW/CCW
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Mounting: stud
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous
- Capacitor included

Compact, single-speed PSC motors run at a higher power factor, with a lower starting current draw and lower running current draw than larger shaded pole motors. Also provide higher starting torque and smoother, quieter operation.

Permanent Split Capacitor and 3-Phase Transformer Cooling Fan Motors

2WCE6

4UY24

- Enclosure: totally enclosed air-over
- Rotation: CW/CCW
- Thermal protection: auto
- 60/50 Hz
- Service factor: 1.0 (2WCE6); 1.5 (4UY24)
- Insulation: Class B
- Bearings: ball
- Max. ambient temp.: 65°C
- Duty: continuous
- Shaft orientation: all-angle
- Stud pattern: 3⅝" x 3⅝" (PSC); 4⅛" x 4⅛" (3-Phase)

Specifically designed for use on outdoor transformer cooling fans. High-efficiency motors with stainless steel shaft.

ECM Fan Coil Motor

- Speeds: 3
- 42 frame (5" body dia.)
- Enclosure: open air-over
- Thermal protection: auto
- Mounting: cradle base
- Bearings: ball
- Max. ambient temp.: 40°C
- Duty: continuous

Suitable as a replacement for older and less energy efficient PSC motors and for use in air conditioners, fan coil units, and blower applications.

HP	Nameplate RPM	Rotation	Voltage	Full Load Amps	Shaft Dia.	Shaft Length	Length Less Shaft	Mfr. Model	Item No.

Shaded Pole Direct-Drive Blower/Fan Motors

- Enclosure: open air-over, except 4UU91 is totally enclosed air-over
- Thermal protection: auto
- Service factor: 1.0
- Bearings: sleeve
- Max. ambient temp.: 40°C
- Duty: continuous air-over

These motors are suitable for unit heaters, condensers, furnace blowers, air circulators, fans, and a wide range of other shaft-mounted fan and blower equipment. 4UU91 has a 5.0 cu.-in. junction box. 4KA23 and 4KA22 are used in Coleman furnaces.

ECM Evergreen Direct-Drive Blower Motors

genteq

- Thermal protection: electronic
- Service factor: 1.0
- Insulation: Class B
- Mounting: band
- Duty: continuous
- Shaft orientation: horizontal
- Replacement for X–13 ECM motors

Replace direct-drive blower motors in residential and light commercial indoor furnaces, air handlers, and package systems that were designed with a standard ECM motor. Maintain ECM-level efficiency up to 80%. Features Soft Start and Off Ramp for quiet operation.

PSC Direct-Drive Blower/Fan Motors

- Rotation: CW/CCW, except 7E667 is CWSE
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Bearings: sleeve, except 490T84, 3LU87 to 3LU90, 7E678, 6GC95 are ball
- Body dia.: 5⅝", except 490T84 is 5 11/16"
- Duty: continuous
- Ring dia.: 2¼"
- Stud pattern: 3⅝" x 3⅝"

Motors have quick-reversing leads. Energy-efficient models feature a typical energy savings of 10% over standard-efficiency motors. Dayton motors include split ring adapter. Capacitor mounting hardware sold separately on Grainger.com.

- Body dia.: 48 frame, 5⅝"; 56 frame, 6½"
- Max. ambient temp.: 60°C
- Duty: continuous
- Stud pattern: 3⅝" x 3⅝"

Commercial-duty motors feature higher starting torque, cooler running temperature, and reversing plug. Open air-over motors have totally enclosed shaft endshield and shell (except 460V motors). Opposite endshield is open. Shaft up/down motors have both endshields totally enclosed with removable drain plugs. Can be mounted vertically or horizontally. Shafts are double flat (90° apart). Dayton® motors feature slinger on shaft. All models are suitable for outdoor air conditioner condensers and refrigeration condensers. Two-speed models can be used on heat pumps.

Dayton®

Motor Rainshields

Disc-shaped rainshields prevent water from damaging open motors that are mounted either shaft-up or shaft-down in outdoor condenser units. Heavy-duty nylon construction resists heat and ultraviolet rays. 4UEZ6 has a deep dish for added protection. 4M219 and 4M220 have internal cooling vanes to reduce motor temperature, and a removable center plug.

MultiFit Multi-Mount and Multi-HP PSC Condenser Fan Motors

- NEMA frame: 42 (5" body dia.)
- Enclosure: totally enclosed air-over
- Rotation: CW/CCW
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Mounting: stud/band/hole
- Bearings: ball
- Max. ambient temp.: 60°C
- Duty: continuous

Motors replace 4.33", 4.42", and 4.62" mounting bolt circle without having to change capacitors or follow complicated wiring diagrams. Energy-efficient PSC design with high-efficiency rating ensures performance in elevated temperatures.

HeatMaster PSC High-Ambient Condenser Fan Motors

- No. of speeds: 1
- Frame: 48Y (5⅝" body dia.)
- Enclosure: totally enclosed air-over
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class F
- Rheem mounting holes (screws included)
- Bearings: ball
- Max. ambient temp.: 70°C
- Duty: continuous

PSC motors are insulated and designed for trouble-free operation at full rated load at high temperature. Rotor cores have corrosion-resistant coating to ensure long motor life. Easy-to-remove drain plugs in each end shield and have 36" color-coded, high-temp. leads. For outdoor air conditioning and refrigeration condensing units and heat pumps.

HeatMaster PSC Ultra Condenser Fan Motors

- No. of speeds: 1
- Frame: 48 (5$^{11}/_{16}$" body dia.)
- Enclosure: totally enclosed air-over
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class F
- Rheem mounting holes (screws included)
- Bearings: ball
- Max. ambient temp.: 80°C
- Duty: continuous

Insulated PSC motors are designed for trouble-free operation and feature a double flat shaft. Also feature ultra-high temperature synthetic bearing grease in double-sealed ball bearings to help the bearings stand up to the most severe conditions. Rotor cores have corrosion-resistant coating to ensure long motor life. Include water-resistant reversing plug and 48" high-temp. leads. Speed Engineered® for speed control duty. For use with outdoor air conditioning and refrigeration condensing units and heat pumps.

ECM Condenser Fan AC Motors

US MOTORS genteq

- Enclosure: Totally Enclosed Air-Over
- Rotation: CW/CCW
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Bearings: ball
- Duty: continuous

Electronically commutated (EC) motors have a built-in microprocessor controller that allows the user to control the motor speed. They are more energy efficient than single-speed general purpose AC motors and can replace shaded pole and permanent split capacitor motors used in refrigeration and air conditioning equipment.

JuggerNaut 3-Phase High-Ambient Condenser Fan Motors

Century®

429J45

- NEMA frame: 56HZ (6½" body dia.)
- Enclosure: open air-over
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class F
- Inverter rated
- Mounting: base/stud/band
- Mounting position: horizontal or vertical shaft up
- Bearings: ball
- Max. ambient temp.: 70°C
- Duty: continuous
- Stud pattern: 4⅛" x 4⅛"

Replace OEM motors in commercial condenser fan applications. Energy-efficient design ensures performance in elevated temperatures. 56H rigid base is easy to remove for mounting flexbility (except 429J46 and 490T58 do not have a removable base). Feature an innovative VCM (voltage change module) to ease installation and a large water slinger to help protect bearings. 60/50 Hz.

Split-Phase Evaporative Cooler AC Motors

- Enclosure: open dripproof
- Thermal protection: auto
- Service factor: 1.0
- Insulation: Class B
- Mounting position: all angle
- Bearings: ball
- Ring dia.: 2½"

These motors are single phase with a lower starting torque for softer startup where the cooling fan must gradually come up to speed after startup. They power the fans inside evaporative coolers that move air into the unit to cool the air and then recirculate it into the surrounding area.

5DVX1

6AYP6

Capacitor-Start Evaporative Cooler AC Motors

- Enclosure: open dripproof
- Thermal protection: auto
- Service factor: 1.0, except 5DVX1 is 1.25
- Insulation: Class B
- Mounting position: all angle
- Duty: continuous
- Ring dia.: 2½"

These evaporative cooler AC motors have a capacitor that provides additional power during startup for higher starting torque. They power the fans inside evaporative coolers that move air into the unit to cool the air and then recirculate it into the surrounding area. The higher torque allows these single-phase motors to move heavier loads at lower speeds.

3-Phase Evaporative Cooler AC Motors

- Enclosure: open dripproof
- Mounting position: all angle

Highly efficient AC motors power the fans inside evaporative coolers that move air into the unit to cool the air and then recirculate it into the surrounding area. They have a high starting torque compared to single-phase models of the same HP, rpm, and frame size. Motors require no capacitors to start or run which can wear out and fail.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

4UX67

Stationary Pedestal Fan AC Motors

- Thermal protection: auto
- 60 Hz
- Service factor: 1.0
- Insulation: Class B
- Bearings: ball
- Max. ambient temp.: 40°C; 60PV47 (100°C)
- Duty: continuous, except 60PV47 and 60PV48

Built-in yoke bracket or yoke strap for mounting the motor to the pedestal. Studs can be used to mount the fan guard directly to the motor's shaft end shield. Used as replacement motors in pedestal fans, some wall-mount fans, and can circulate air in factories, schools, warehouses, and other large indoor areas.

Replacement Motors for Spot Cooling and People Cooling

- Frame: non-standard
- Enclosure: totally enclosed air-over
- Thermal protection: auto
- Service factor: 1.0
- Bearings: ball
- Max. ambient temp.: 40°C
- Capacitor included

These direct drive, permanent split capacitor (PSC) motors have a capacitor that decreases the amount of power consumed for a given load making them more energy efficient than shaded pole motors. They provide smooth, soft, start-ups in fans, blowers, and are replacements for select Dayton ventilators.

Permanent Split Capacitor Unit Heater Motors

- Enclosure: totally enclosed air-over
- Rotation: CW/CCW
- Thermal protection: auto
- Service factor: 1.0
- Duty: continuous

Provide smooth and softer startups for fans and blowers that must gradually come up to speed after startup. They have a capacitor that decreases the amount of power consumed for a given load. Use with unit heaters and other shaft-mounted fan and blower equipment in dusty, dirty, noncombustible environments. Cradle base models have 1" x 5⁄16" mounting slots in a 1 11⁄16" x 3½" pattern.

1-Phase Flange-Mount Oil Burner Motors

- Thermal protection: manual
- Max. ambient temp.: 40°C

These motors power the fan and oil pump inside an oil burner unit. They have a NEMA oil burner flange for direct coupling to domestic oil burners and feature quick-change reversing terminals. Capacitor-start motors include capacitor.

1- and 3-Phase Water Circulator Motors

Century®

- 1725 rpm
- Enclosure: open dripproof
- 60 Hz
- Insulation: Class B
- Ring dia.: 2½"

Power water circulation pumps for the transfer of hot water in hydronic heating systems and in water recirculation equipment. These exact replacement motors are fully interchangeable with specific motors on Bell & Gossett, Armstrong, Teel, and Taco brand circulator pumps.

Lug-Mount

Draft Booster Motors

Dayton®

- Enclosure: open air-over
- Studs are 2.85" bolt center, #8-32 studs
- Bearings: ball
- Body dia.: 3.3"
- Max. ambient temp.: 40°C
- Duty: continuous
- Centrifugal safety switch

Required for most gas furnaces and help improve energy efficiency. Auxiliary contacts of SPST centrifugal safety switch are included and rated 120VA pilot duty. 1D089 also has 3 holes on 4.36" bolt circle.

Split-Phase Open Dripproof Belt-Drive Face-Mount Motors

6XH49

6XH54

- Rotation: CW/CCW
- Bearings: ball
- Insulation: Class B
- Max. ambient temp.: 40°C

Have low to moderate starting torque and deliver smooth, soft, start-ups in HVAC equipment that must gradually come up to speed. NEMA service factors up to 1.40 provide a reserve margin for applications where intermittent overloading or fluctuating (high/low) voltage conditions may occur. Provide direct replacement in many Jenn-Air and similar commercial kitchen exhaust ventilators. Motors are compatible with 2-speed 115V switch 1DGZ9 sold on Grainger.com. For use in exhaust ventilators in commercial cooking areas and other moderate-starting torque equipment that can be directly connected to a NEMA 56CZ face-mounted motor.

Note: Not intended for power transmission applications.

Split-Phase Open Dripproof Belt-Drive Motors

- Rotation: CW/CCW
- Thermal protection: auto, except No. 4RGX1 has no thermal protection

Feature a low to moderate starting torque and deliver smooth, soft, start-ups in HVAC equipment that must gradually come up to speed. Suitable for use in fans, blowers, whole house fans, air circulators, and air coolers where a quiet running motor is required. A ⅝"-dia. shaft bushing comes with Dayton motors having ½" x 1½" shafts.

Dayton 3K384, 3K386—For use in attic fans.

Marathon—MAXGuard insulation system offers protection for use with a variable frequency drive.

Century 4UE60, 4UE62—Adjustable ring-mount motors have 2¼"-dia. resilient rings and come with snap rings to increase diameter to 2½".

Dayton, 2-Speed—Quick-connect terminal board eases installation.

IMPORTANT MOTOR INFORMATION | Refer to pages 3-7 for selection guidelines, standardized dimensions, thermal protection information, UL 507 Standard location information, NEMA & IEC guidelines, energy legislation information, and terminology.

Dayton

Split-Phase Start/Capacitor-Run Open Dripproof Belt-Drive Motors

- Rotation: CW/CCW
- Insulation: Class B, except 6K857 is F
- Body dia.: 5⅝", except 6K872 is 6½"
- Max. ambient temp.: 40°C
- Duty: continuous

These motors feature a low to moderate starting torque and deliver smooth, soft, start-ups in HVAC equipment that must gradually come up to speed. They have an open dripproof enclosure and are for use in clean, dry, nonhazardous locations. Motors are suitable for use in fans, blowers, whole house fans, air circulators, and air coolers where a quiet running motor is required.

Split-Phase Open and Air-Over Belt-Drive Motors

- Rotation: CW/CCW
- Insulation: Class B
- Body dia.: 48 frame, 5⅝"; 56 frame, 6½"
- Max. ambient temp.: 40°C
- Duty: continuous

Feature low to moderate starting torque and provide smooth, soft, start-ups in HVAC equipment that must gradually come up to speed. Motors are for use in exhaust fans, air circulators, and other air-over fan applications. Open motors are for use in clean, dry, nonhazardous locations. Enclosed motors are for use in dusty, dirty, nonhazardous locations.

2 Speed—Designed specifically for diminishing torque air-moving applications, such as belted or direct-drive fans.

Capacitor-Start Open Dripproof Belt-Drive Motors

- Rotation: CW/CCW
- Thermal protection: auto
- Max. ambient temp.: 40°C, except 4VAG4 to 4VAG7 are 60°C; 4YU31 is 65°C

Have a capacitor to provide additional power during startup for higher starting torque. This higher torque allows these single-phase motors to handle heavier loads at lower speeds. Motors are for use with belt-drive applications, including furnace blowers, exhaust fans, industrial blowers, and ventilators. 2-speed models are for use in diminishing-torque air-moving applications such as belt- or direct-drive fans and blowers. 4UB57 and 4UB98 include ⅝"-key shaft adapter. 4UB57 is notched for 48 or 56 NEMA frame mount.

Dayton Century marathon Motors

4RGW9

Capacitor-Start/Run Belt-Drive Motors

- Rotation: CW/CCW
- Thermal protection: auto
- Insulation: Class B
- Bearings: ball
- Max. ambient temp.: 40°C, except 4VAG8 is 60°C

Feature a capacitor to provide additional power during startup for higher torque, and a separate capacitor to run for higher operating efficiency. Motors are used to power HVAC equipment such as air coolers, belt-drive fans, roof ventilators, and air circulators.

High-Temperature Belt-Drive Motors

4VAF9

- Enclosure: open dripproof
- Rotation: CW/CCW
- Thermal protection: auto
- Insulation: Class B
- Mounting: cradle/stud
- Frame: steel
- Bearings: ball
- Max. ambient temp.: 60°C

These single-speed, 1-phase, continuous-duty motors are suitable for use in roof ventilators and have quick-connect terminals to help speed installation. 48Y frames are notched to replace 48 or 56 frame.

Century® marathon™ Motors

3-Phase Belt-Drive Motors

- Rotation: CW/CCW
- Insulation: Class B, except 10K091 and 19RW76 to 19RW78 are Class F
- Bearings: ball
- Max. ambient temp.: 40°C

Highly efficient motors have a high starting torque compared to single-phase models of the same HP, rpm, and frame size. They require no capacitor, start winding, centrifugal switch, or other starting device that can wear out and fail. Motors are suitable for use with pumps, industrial fans, blowers, and exhaust fans.

Motor Start Capacitors

- 60/50 Hz
- Temp. range: -40° to 65°C (-40° to 149°F)

Electrolytic, nonpolarized capacitors are designed for normal intermittent service on single-phase AC motor starting circuits. Round, molded cases protect the capacitor from oil, dirt, moisture, and grease. 60/50 Hz.

Motor Capacitor Accessories

Mounting Brackets—Use in conjunction with end caps to provide secure and electrically safe mounting.

Resistors—Bleed off electrical charge when soldered across capacitor terminals. Prevent contact-point arcing and welding under rapid cycling.

End Caps—Provide weatherproofing for lead connections and facilitate mounting capacitor in bracket. With bottom lead hole, leads exit through bracket; with top lead hole, leads exit opposite bracket.

Jumper Wire Sets—Connect 2 capacitors in series or parallel.

Motor Run Capacitors

Dayton

- Temp. range: Motor Run -40° to 85°C (-40° to 185°F), Dual Run -40° to 70°C (-40 to 158°F)
- 60/50 Hz

Aluminum, hermetically sealed capacitors improve the electrical performance of motors, air conditioners, and refrigeration equipment. PCB-free, the capacitors feature an aluminum case with steel cover and 1/4" male quick-connect terminals with plastic insulators. Protected to 10,000 AFC.

Rectangle Motor Run Capacitors

Dayton

- Temp. range: -40° to 85°C (-40° to 185°F)
- 60/50 Hz

Feature ABS plastic case constructed with self-healing dielectric metalized polypropylene film, with 1/4" blade, quick-connect terminals, and metal tab mounting bracket. For use in blower, fan, and pump motors. Rectangular shape.

Selecting a Gearmotor

A gearmotor is an electro/mechanical device using an electric motor to drive a geartrain encased in a housing. The geartrain reduces output speed while increasing available torque. Gearmotors move an object in a given direction at a rate of speed (RPM), and provide the required twisting force (torque). Select your model once load input performance requirements are identified. You must know the speed and torque requirements of the load to be driven. Unusual loads or harsh environments need to be considered before selecting a driving device. Horsepower (HP) is not a factor in selecting a standard gearmotor, since each model is designed for a specific performance level.

Parallel-Shaft have helical and spur gears. First stage gears are phenolic, nylon, or steel and typically helical for low noise. Subsequent gears are usually metallic (sintered or hardened cut steel) depending on the performance level of the gearmotor. Parallel-shaft models offer high efficiency in compact sizes.

Right-Angle include mainly worm-type gears of precision-machined steel. Worm wheel is often bronze, but may be phenolic or cast iron. These gearmotors can be heavier construction, handle higher shock loads, and run quieter than comparably-sized parallel-shaft designs, but often less efficiently.

Parallel-Shaft 4ZJ45

Mechanical Considerations

Speed. How fast should equipment or an object move? Output speeds are available from less than 1/2 rpm (revolution per minute) to nearly 350 rpm, depending on motor type and gear ratio. Based on your application, you may need to consider whether additional modified speeds will be produced through sheaves or sprocket type drive systems before determining gearmotor output speed.

Starting Torque provides initial power to get things moving. On large conveyors, starting torque requirement may be high while a small rotating display cabinet may require very little torque to overcome resistance. Small gearmotors typically have "start" and "run" torque specifications shown due to their lower overall output capabilities. Starting torque ratings can be lower than maximum running torque ratings. Heavier duty gearmotors are usually only rated for their full-load (running) torque capability since starting torque is relatively high.

Running Torque (Full Load) is the continuous twisting force to keep things moving after initial start and must maintain power under all variable load situations to provide adequate service. Running torque listed in the catalog is the maximum torque available for safe, continuous operation. Frequent starts and stops will require use of starting torque more frequently. This could result in excessive heat build-up, causing premature motor failure.

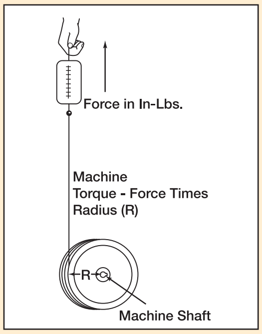
How To Measure Torque
Caution: Disconnect Power Before Proceeding

Torque required to drive a machine may be measured by using a flat grooved pulley, a cord and a spring scale rated in lbs. Pulley must be rigidly attached to machine's drive shaft, with cord wrapped several times around pulley. Do not allow cord to overlap. The other end is tied to the scale. When the scale is pulled, it will turn the pulley. When the pulley first starts to turn, the scale will register starting force required in pounds.

Force registered on scale, in pounds, when multiplied by radius of pulley (radius is measured from the center of machine shaft to center of cord), in inches, yields the starting torque, in in.-lbs. required by machine.

If torque characteristics of the machine (load) vary during its operating cycle, torque must be determined at the point in the cycle where it is the greatest.

If pulley can be turned (by pulling on cord) at a rate equal to normal speed of driven equipment, an indication of running torque can be obtained. If load of machine is almost entirely due to friction, running requirement will be essentially the same regardless of speed. However, if load is primarily the result of inertia or windage (air drag), characteristics of the inertia or windage elements must be known.



Electrical Considerations

Before you can select the best gearmotor for your application, you need to identify your intended power supply. AC and DC input gearmotors from 12VDC to 460VAC are available. This chart provides typical characteristics of different motor types as a guide for your selection.

Type	Starting Torque	Reversible	Speed Controllable	Features
Shaded Pole	Low	No	No	Rugged, Relative Low Cost
PSC	Medium	Yes	No	Reversible, Quiet Operation
Split-Phase	Med/High	Yes	No	Fairly High Start Torque
Capacitor-Start	High	Yes	No	Heavy-Duty Start-Ups, Dual Voltage
3-Phase	High	Yes	No*	Simple, Reliable, High Start Power and Efficiency
DC	High	Yes	Yes†	Speed Controllable, High Start Torque
Universal AC/DC	High	Yes	Yes†	Speed Controllable, Relatively Low Cost, Simple Operation

Inverter-Duty motors can be controlled with an inverter. † Performance matched speed controls are available for many catalog gearmotor listings.

Loads

Driven items connected to and driven by the gearmotor output shaft constitute the load. Not all loads coupled to gearmotors have steady speed and torque requirements. Some loads demand power surges from the gearmotor during running cycle. This can be abusive to gears. Also, environmental conditions and space restrictions need to be taken into account. Two types of loads that require careful consideration before selecting a gearmotor are Overhung (Radial) Load and Shock Load.

Overhung (Radial) Load (OHL) is the perpendicular force pushing against the side of an output shaft. This force is either from a weight hanging on the output shaft or from a sprocket, pulley or gear being used on the shaft. Every gearmotor has an OHL specification which should not be exceeded.

If you plan to use a sprocket, pulley, gear or any weight suspended directly on the shaft, calculate OHL to aid selection of the gearmotor. First, use the formula below to determine the pounds of load. Second, multiply pounds of load by the appropriate drive factor at right to determine actual OHL ratings in pounds on center of output shaft.

$$\frac{\text{Full-Load Torque (Requirement of Gearmotor)} \times 2}{\text{Pitch Dia. of Sprocket, Pulley or Gear}} = \text{Lbs. of Load}$$

Shock Load. Some applications subject gearmotors to loads that transmit shock or abrupt peak loads back to the gearmotor. Shock load can create peak loads several times greater than gearmotor torque rating. For example, when a heavy object accidentally is dropped on a running conveyor, this causes shock to gears and may even break them. Be sure the gearmotor is rated high enough to handle maximum anticipated shock load conditions.

115/230 and 115VAC Permanent Split Capacitor Parallel-Shaft Gearmotors

- Gearcase: die-cast aluminum
- Lubrication: permanent heavy gear oil
- Gears: hardened steel
- Bearings: needle throughout; ball on motor
- Mounting: all-position, optional mounting bracket 2A754 (sold separately on Grainger.com)
- Rotation: reversible
- Thermal protection: none
- Ambient: 40°C
- Capacitor: included
- Brake: adaptable to 5X400 (sold separately on Grainger.com) using 1 disc in brake

Note: Ratings shown are at 60 Hz. Gearmotors 2H604 and 2H602 are also operable at 50 Hz, with HP and rpm at 5/6 of the 60 Hz rating.

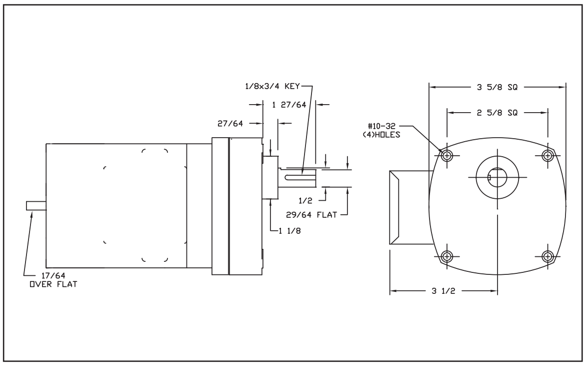
115, 230, and 115/230VAC Permanent Split Capacitor Parallel-Shaft Gearmotors

Dayton

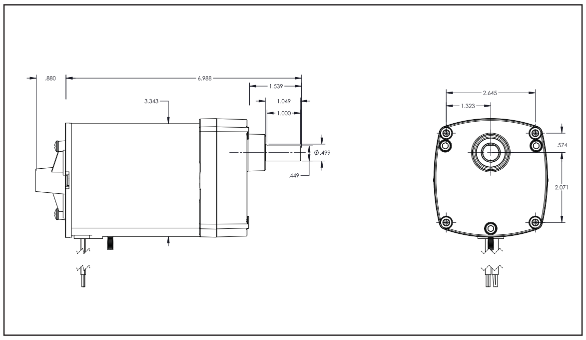
Note: Ratings shown are at 60 Hz. 60/50-Hz gearmotors are also operable at 50 Hz, with HP and rpm at 5/6 of the 60-Hz rating. 6Z081, 6Z082, 6Z083, 6A197, 6Z084, and 6A196 are operable at 60 Hz only.

A.
Shown with conduit box accessory



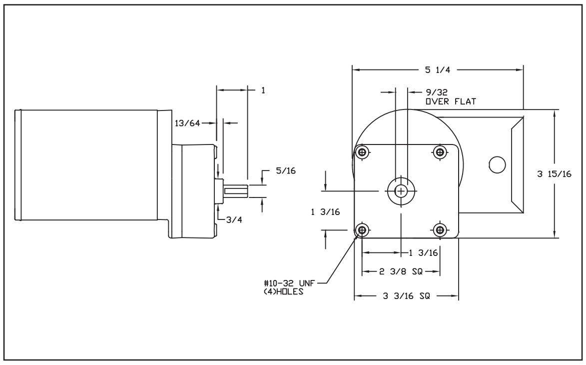
A.
- Gearcase: die-cast aluminum
- Lubrication: permanent heavy gear oil
- Gears: 1st stage steel, subsequent stages steel or heat-treated powdered metal
- Bearings: Heavy-duty needle on case; ball on motor
- Mounting: all-position (optional mounting bracket 2A754)
- Rotation: reversible
- Thermal protection: none; impedance on 6Z073 to 6Z076
- Ambient: 40°C
- Brake: adaptable to 5X400 (sold separately on Grainger.com)

B.



B.
- Enclosure: totally enclosed, nonventilated
- Gearcase: CNC machined, die-cast aluminum
- Lubrication: grease-filled
- Gears: first stage high-strength polymer and powdered metal
- Bearings: ball bearings for motor, needle for output shaft
- Mounting: all-position (optional mounting bracket 2A754)
- Rotation: reversible
- Thermal protection: none
- Ambient: 40°C
- Brake: adaptable to 5X400 (sold separately on Grainger.com)

C.



C.
- Enclosure: totally enclosed, nonventilated
- Gearcase: die-cast zinc
- Lubrication: grease-filled
- Gears: steel, 1st stage acetal
- Bearings: sleeve on case; ball on motor
- Mounting: all-position
- Rotation: reversible
- Thermal protection: none
- Ambient: 40°C

115VAC Shaded Pole and Split-Phase Parallel-Shaft Gearmotors

Dayton®

3M326

- Enclosure: totally enclosed fan cooled
- Gearcase: die-cast aluminum
- Lubrication: permanent heavy gear oil
- Gears: hardened steel, AGMA Class 9
- Bearings: heavy-duty needle roller and thrust ball bearings on case; ball on motor
- Mounting: all-position
- 60 Hz
- Rotation: clockwise facing output shaft on shaded pole models; reversible on split-phase models
- Thermal protection: none
- Ambient: 40°C
- Brake: adaptable to 5X400. 1 brake disk required for all units (sold separately on Grainger.com)

115VAC Permanent Split Capacitor Right-Angle Gearmotors

Dayton

- Gearcase: zinc alloy
- Lubrication: TENV models grease-filled; TEFC models oil-filled
- Gears: TENV models hardened-steel worm, phenolic output gear; TEFC models hardened-steel worm, forged-bronze output gear
- Bearings: ball on case and motor
- Mounting: all-position except input motor shaft up
- 60/50 Hz
- Rotation: reversible
- Thermal protection: none
- Ambient: 40°C
- Brake: adaptable to 5X400 using 1 disc with 1/20-HP, 2 discs with 1/12- and ⅛-HP models (sold separately on Grainger.com)

Note: Ratings shown are at 60 Hz. Gearmotors are also operable at 50 Hz, with HP and rpm at 5/6 of the 60 Hz rating.

115VAC and 230VAC Hypoid Hollow-Shaft Right-Angle Gearmotors

PowerSTAR BISON

- Enclosure: TEFC
- Gearcase: die-cast aluminum
- Lubrication: extreme-pressure grease
- Gears: hardened steel; 1st stage hypoid AGMA Class 10, subsequent stages are helical AGMA Class 9
- 60 Hz for 115VAC; 6-90 Hz for 230VAC
- Bearings: ball
- Mounting: all-position
- Rotation: reversible
- Thermal protection: none
- Max. ambient: 40°C
- IP-54 rating

PowerSTAR design delivers higher torque at improved efficiencies for packaging and light- to medium-duty conveying applications. Lightweight aluminum shell keeps unit running cool, while ground gearing provides quiet, precise, low-backlash operation. Compact profile and mounting is dimensionally interchangeable with Brother F3 series and many European gearmotors. Flange version also available on Grainger.com. For PowerSTAR accessories, see page 85.

Motor-Mounted Speed Control

Dayton

- IP30 enclosure
- 4A max.
- Operating temp: 104°F (40°C)
- Accepts tach feedback

For 90VDC permanent magnet motors and gearmotors up to 1/6 HP. SCR controller direct-mounts to motor endbell. Features adjustable current/torque limit and maximum and minimum speed pots. Easy assembly.

BISON PowerSTAR

90VDC Hypoid Hollow-Shaft Right-Angle Gearmotors

- Enclosure: totally enclosed nonventilated
- Gearcase: die-cast aluminum
- Lubrication: extreme pressure grease
- Gears: hardened steel hypoid
- Bearings: ball
- Mounting: all position
- Rotation: reversible
- Brushes: externally replaceable
- Max. ambient: 40°C

PowerSTAR compact design delivers higher torque at improved efficiencies for packaging and light-to medium-duty conveying applications. Lightweight aluminum shell keeps unit running cool, while ground gearing provides quiet, precise, low backlash operation. 12 and 24VDC gearmotors are available on Grainger.com.

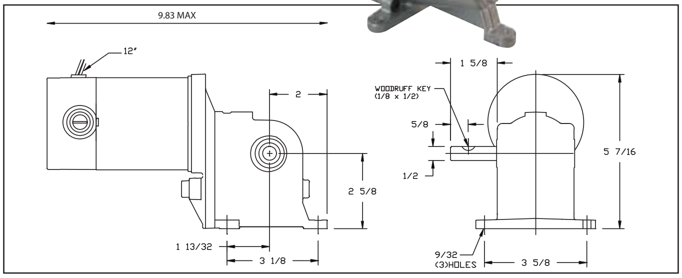
90VDC Permanent-Magnet Right-Angle Gearmotors

Dayton

1LRA8



- Enclosure: totally enclosed nonventilated
- Gearcase: die-cast zinc
- Lubrication: grease packed
- Gears: input gear steel; worm hardened steel; output gear cast iron
- Bearings: bronze sleeve on case, ball on motor
- Mounting: all-position, base
- Rotation: reversible
- Brushes: externally replaceable
- Ambient: 40°C
- Seals: on output shaft
- Gear limited
- Units are compatible with speed control 2PUX3 (sold separately on Grainger.com)

Dayton

C-Face Right-Angle Speed Reducers and Bases

- 29 to 350 rpm, continuous duty
- All-position mounting with optional bases, except input motor shaft up
- Shipped with Klübersynth UH1 6-460 gear oil 34K212
- Double-lipped and spring-loaded shaft seals; large oil sump

Interchangeable with most Grove (Flexaline) and Ohio (Uniline) reducers. Thread-rolled and hardened alloy steel worm for higher strength and lower power loss; forged bronze and hardened worm gear. Ball bearings on input shaft, tapered roller bearings on output shaft. Cast-iron housing. For low-speed/high-torque applications when coupled to a NEMA 56C-Face, 1750-rpm motor (not included).

C-Face Right-Angle Speed Reducers and Bases

- Left output shaft
- All-position mounting (mounting bases sold separately)
- Shipped without oil, use 34K212 (sold separately on Grainger.com)

Heavy-duty worm gear speed reducers with long-life seals have value-engineered features for flexible installation and simplified maintenance. Integral input worm and shaft of case-hardened alloy steel. Oversize ball and roller bearings for maximum performance. Fine-grain cast-iron housing.

Note: Models with stainless steel housing are available on Grainger.com.

C-Face Right-Angle Speed Reducers and Bases

WINSMITH HIGH QUALITY SPEED REDUCERS

- Interchangeable with Winsmith MDNS models
- Double-shaft assembly
- Filled with Mobil Glygoyle 460 synthetic lubricant

Black coating system is scratch resistant and suitable for washdown and outdoor applications. Exceeds ASTM B-117, 1000-hr. salt spray test. Shaft slingers prevent contaminants from contacting oil seals. Open/close vent. Can be mounted with or without optional base using predrilled and tapped holes. Lubricant meets NSF requirements and is acceptable for incidental food contact (H1) areas.

FLEXBLOC C-Face Right-Angle Hollow-Shaft Speed Reducers

29TL62

- Universal gear housing
- Adaptable to any mounting position
- Filled with food grade synthetic lubricant
- Includes single and double output shafts with standard keys

Motor coupling provides accurate motor shaft alignment, minimizes fretting, and creates a low backlash/high-strength connection.

Fine-grained bronze alloy worm gear and hardened alloy steel worm pinion gear for durability. Oversize output ball bearings provide high radial and axial load capacities and long service life. Double-lip oil seals. Aluminum alloy housing.

Note: Additional sizes are available on Grainger.com.

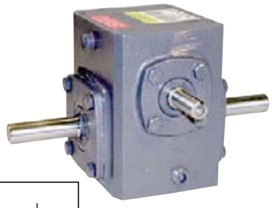
Indirect-Drive Right-Angle Speed Reducers

Dayton



6Z419

- Reversible rotation
- All-position mounting, except input shaft down; optional bases available on page 87
- Shipped with Klübersynth UH1 6-460 gear oil 34K212
- Double-lip, spring-loaded oil seals; large, prefilled oil sump

Interchangeable with most Grove (Flexaline) and Ohio (Uniline) models. The output shaft on single-output models can be field-converted from standard left-hand to right-hand extension. Worm is thread-rolled and alloy-hardened for higher strength and low power loss. Left-hand facing input shaft. Input shaft has ball bearings and output shaft has tapered roller bearings. Cast-iron housing. Flange coupling kits to adapt NEMA 56C-145TC motors to Dayton right-angle speed reducers sold separately; see below.

Indirect-Drive Right-Angle Single-Shaft Speed Reducers

Boston Gear

- All-position mounting (bases sold separately)
- Shipped without oil, use 34K212

Heavy-duty worm gear speed reducers have value-engineered features for flexible installation, long life, and simplified maintenance. Integral input worm and shaft are made from case-hardened alloy steel. Oversized ball and roller bearings assure maximum performance. Fine-grained cast-iron housing and output shaft (left-hand facing input shaft).

Indirect-Drive Right-Angle Single-Shaft Continuous-Duty Speed Reducers

Dayton

- 2" worm center distance
- 700 lb. overhung load
- All-position mounting
- Shipped with Klübersynth UH1 6-460 gear oil 34K212
- Double-lip oil seals on input and output shafts; spring-loaded inner lip

For high-torque, low-speed applications. Tapered roller bearings. Hardened steel worm gear. Forged bronze worm wheel.

Indirect-Drive Right-Angle Double-Shaft Speed Reducers and Bases

WINSMITH HIGH QUALITY SPEED REDUCERS

- Interchangeable with Winsmith XDNS models
- Double-shaft assembly
- Filled with Mobil Glygoyle 460 synthetic lubricant

Black coating system is scratch-resistant and suitable for washdown and outdoor applications. Shaft slingers prevent contaminants from contacting oil seals. Open/close vent. Can be mounted with or without optional base using predrilled and tapped holes. Lubricant meets NSF requirements and is acceptable for incidental food contact (H1) areas. Exceeds ASTM B-117, 1000 hour salt spray test.

Double C-Face Magnetic Disc Brakes

- Service factor: 1.0
- Max. ambient: 40°C
- Coil lead length: 15"
- 60/50 Hz
- Mounting: horizontal

Direct-acting spring-set brakes use 1 moving part to engage and hold load under power-off conditions. Brake is designed to convert C-face motors and gearmotors to brake motors or brake gearmotors. Models with 56C/140TC NEMA frame have ⅞" O.D. x ⅝" I.D. shaft bushing.

Standard Dripproof—Used in indoor applications such as conveyors and door openers.

Waterproof/Dust-tight—Used in indoor and outdoor applications where dirt and moisture are present.

Washdown—Used in food and dairy applications. Comply with 3A dairy standards pertaining to nonproduct-contact surfaces and with NEMA DEF.MG1-1.26.6 for waterproof machines. USDA-approved white epoxy paint. BISSC Certified.

Dayton®

Note: Not intended for accurate positioning, indexing, or vertical holding applications such as vertical conveyors or hoists.

- Service factor: 1.4
- Max. ambient: 40°C
- Coil lead length: 18"
- 60/50 Hz
- Mounting: horizontal
- Interchangeable with Stearns Series 56,000

Direct-acting spring-set brakes have single-point air gap adjustment, factory set for plug-and-run assembly for easy maintenance. Have no linkage to wear, which helps extend service life. Knockout hole in cover accommodates through-shaft brake motors with fans. Suitable for use in conveyors, packaging machines, hoist end-trucks, security/toll booth gates, and sorting machines.

Note: Not intended for accurate positioning, indexing, or vertical holding applications such as vertical conveyors or hoists.

Warner® Electric

C-Face Clutches and Brakes

Patented Autogaps technology allows clutch and brake to automatically adjust for wear, requiring no lubrication or maintenance.

Packaged NEMA C-face clutch/brake modules offer high-performance starting and stopping of loads, with the motor running, in an easy-to-install package. Mount to NEMA C-face motor or between motor and reducer. Power on engagement of the brake and clutch. Use the HP vs. Shaft Speed Selection Table to select the proper unit for your application.

Note: Brake is not intended for accurate positioning applications or vertical holding applications, such as vertical conveyors or hoists.

Clutch/Brake Controls—Mount on standard module conduit boxes. Green LED indicates power to clutch; red LED indicates power to brake.

HP vs. SHAFT SPEED SELECTION TABLE
CAUTION: RPM refers to shaft speed at clutch or brake.

Fenner Drives® POWERTWIST DRIVE POWERTWIST

Premium Link Belts

- Composite polyurethane/polyester construction
- Superior resistance to oil, water, and chemicals
- Temp. range: -40° to 240°F

Belts can be easily installed without dismantling drives.

PowerTwist Drive V-Belts—This long-lasting, permanent upgrade for V-belt drives offers reduced drive vibration and fit-and-forget installation with no need to re-tension. The belts assemble to any length so you need not stock multiple belt sizes.

PowerTwist Wedge Belts—Heavy-duty abrasive-resistant belts are a drop-in upgrade for your rubber wedge belts in big shock-loaded applications with multi-belt drives. Easily adjust to any length within seconds.

PowerTwist Standard V-Belts—Quick replacement for failed rubber V-belts can be assembled to any length so you always have the right belt on hand.

PowerTwist Roller Drive Belts—Quickly and permanently replace belts on live roller conveyors. Drop-in replacement for B section V-belts on any live roller conveyor or 9⁄16" round profile belts on Rapistan Conveyor Systems.

BANDO

Tension Meter

Tension Master measures the vibration frequency of the actual belt, not the air around the belt, for a more accurate reading than competitive systems. The free downloadable app includes all the required belt parameters, requiring much less data input by the end user than other systems require. Can also be used to measure vibration frequency in any type of equipment. Includes tension meter, batteries, sensor, and adhesive pads.

Description	Mfr. Model	Item No.
Belt Tensioning Kit	BUI 4006	**31CD50**
Replacement Sensor with Cord	BUI 4009	**30NX23**
Replacement Adhesive Tabs, Pkg. of 30	BUI 4010	**30NX24**

Selection Guidelines

FOR DIRECT REPLACEMENT WHEN ORIGINAL BELT PART NUMBER IS AVAILABLE
Match ARPM (Association of Rubber Products Manufacturers) number/manufacturer's part number (from your existing V-belt), then make selection from the following pages. Dayton V-belts conform to ARPM standards.

WHEN ORIGINAL BELT PART NUMBER IS NOT AVAILABLE
When replacing V-belts with worn markings, use the belt cross-sections at the top of each page to identify the belt type. Belt length can be determined by using either V-Belt Rule 6AGK6 (sold separately on Grainger.com), or by using the Belt Length Formula calculation on this page.

ARPM Belt Size	BELT INTERCHANGE* BROWNING	CONTITECH/ GOODYEAR	GATES	DAYCO
3L, 4L, 5L	FHP	Fractional HP	Truflex	Durapower FHP
A, B, C	Super Gripbelts	Hy-T	Hi-Power	Super Blue Ribbon
AX, BX, CX	Gripnotch	Torque-Flex	Tri-Power	Gold Label Cog Belt
3VX, 5VX	358	HY-T Wedge	HY-T Wedge	Power Wedge Vee Cog-Belt

* Call 1-800-GRAINGER (472-4643) for assistance with cross-referencing specific part numbers.
Additional V-belt lengths are available on Grainger.com

Sheave Pitch Diameters

TO CALCULATE MOTOR SHEAVE PITCH DIAMETER
Multiply driven sheave rpm by driven sheave pitch diameter and divide by motor sheave rpm.

TO CALCULATE DRIVEN SHEAVE PITCH DIAMETER
Multiply motor sheave rpm by motor sheave pitch diameter and divide by driven sheave rpm.

FORMULA
(Motor Sheave P.D.) x (Motor Sheave rpm) = (Driven Sheave P.D.) x (Driven Sheave rpm)

V-Belt Length Formula

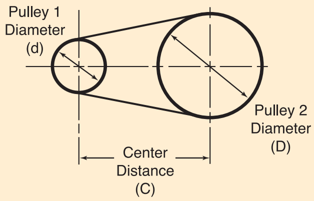
Dayton V-belts interchange with major brands such as Browning, Carlisle, ContiTech, Dayco, Gates, Goodyear, and others.

BELT LENGTH FORMULA

exact / approximate

$$L = 2C + 1.57\,(D + d) + \frac{(D - d)^2}{4C}$$

L = Pitch Length of Belt
C = Center Distance
D = Pitch Diameter of Large Sheave
d = Pitch Diameter of Small Sheave



2L, 3L, 4L, and 5L Fractional Horsepower V-Belts

Dayton

All belts are oil- and heat-resistant. 3L, 4L, and 5L belts are static-conductive. 2L belts are cogged. These Dayton V-belts interchange with major brands such as Browning, Carlisle, ContiTech, Dayco, Gates, Goodyear, and others. They are manufactured to tolerances set by the ARPM (Association of Rubber Products Manufacturers).

Dayton

A, B, C, 3V, and 5V V-Belts

All belts are oil- and heat-resistant, and static-conductive, and interchange with brands such as Browning, Carlisle, ContiTech, Dayco, Gates, and Goodyear. These Dayton V-belts are built to matching specifications, so all belts of the same size are within the tolerences set by the ARPM (Association of Rubber Products Manufacturers).

Find more information on V-Belts on page 97.

Dayton

AX, BX, CX, 3VX, and 5VX Raw Edge Cogged V-Belts

For medium/high HP industrial applications that require single or multiple V-belt drives. Belts resist oil and heat, and are static conductive. Belts interchange with brands such as Browning, Carlisle, ContiTech, Dayco, Gates, and Goodyear. These Dayton V-belts are built to matching specifications, so all belts of the same size are within the tolerances set by the ARPM (Association of Rubber Products Manufacturers).

Banded V-Belts

Top cover protects belt from oil and heat, and maintains dimensional stability. Durable transverse tensile cords create a permanent connection between individual belts. For use with multiple belt systems where shock loads, pulsation, or misalignment cause belts to whip, flip over, or jump off of the sheave. Manufactured to tolerances set by the ARPM (Association of Rubber Products Manufacturers). Additional banded V-belts are available on Grainger.com.

3L, 4L, and 5L Fractional Horsepower V-Belts

Continental ContiTech

Static conductive, plus heat-, ozone-, and abrasion-resistant. 4L and 5L belts are cogged. All are manufactured to tolerances set by the ARPM (Association of Rubber Products Manufacturers). For additional sizes, go to Grainger.com.

A, B, C, 3V, and 5V V-Belts

Continental ContiTech

HY-T Plus and HY-T Wedge wrapped belts are engineered with high-grade rubber for static conductivity and resistance to heat, ozone, oil, and abrasion. Built to Matchmaker specifications so all belts of the same size are within the matching tolerances set by the ARPM (Association of Rubber Products Manufacturers). For additional sizes, go to Grainger.com.

AX, BX, CX, 3VX, and 5VX Raw Edge Cogged V-Belts

Torque-Flex and HY-T Wedge belts are fully cogged to provide the flexibility needed to keep their high-traction rubber edges in contact with the sheave grooves, helping you achieve the horsepower you need at a lower total drive cost. Produced with highly engineered oil- and heat-resistant and static-conductive EPDM, providing a broader temperature range than ever before (-40° to 230°F). Built to Matchmaker specifications so all belts of the same size are within the matching tolerances set by the ARPM (Association of Rubber Products Manufacturers). For additional sizes, go to Grainger.com.

Continental ContiTech

Banded Cogged V-Belts

HY-T Torque Team belts are designed and built to deliver superior performance. Belts provide high-strength and high-horsepower capacity. The tough fabric backing provides the maximum longitudinal flexibility and lateral strength to withstand the dynamic forces acting on the belt. Static conductive and resistant to heat, oil, ozone, and abrasion. Ideal for pulsating loads, high-capacity drives, and short center heavy-duty drives. Manufactured to tolerances set by the ARPM (Association of Rubber Products Manufacturers). For additional sizes, go to Grainger.com.

Continental ContiTech

Banded V-Belts

Constructed of multiple V-belts fused together to create ribs in a V-belt with reinforced backing. They offer more stability than multiple, single V-belts, and provide additional protection against heat and oil. Belts are used in applications where multiple V-belts are needed but speed fluctuations, misalignment, and vibration might cause single belts to whip, turn over, or slide off the pulley.

B Section—Have a classical design and are for use with drive systems that require power transmission of 1 HP or greater.

5V Section and 8V Section—Belts have a wedge design and have a smaller top width and a deeper profile than classical V-belts. They can transfer higher power than classical V-belts of the same size.

Metric Raw-Edge Cogged V-Belts

Suitable for industrial applications such as textile mills, machine applications, and food processing, where metric cross sections are required. Manufactured to tolerances set by the ARPM (Association of Rubber Products Manufacturers). SPA, SPB, SPC, and XPC belt types are available on Grainger.com.

1DHH8

Timing Belts

- XL, L, H, and HT Series
- For timing belt pulleys, see page 114

Quiet operating, low-maintenance synchronous timing belts ensure nonslip, positive performance with low tension requirements.

XL Series—Fiberglass cords have seamless construction for smooth operation and to reduce vibration. They can be installed on trapezoidal tooth pulleys, but the style (or series), pitch, and width of the belt must be compatible with the pulley. For general purpose applications requiring low to moderate amounts of torque.

L Series—Strong fiberglass cords won't stretch for long life and they can be installed on trapezoidal tooth pulleys, but the style (or series), pitch, and width of the belt must be compatible with the pulley. For general purpose applications requiring low to moderate amounts of torque.

L Series (Double-Sided)—Provide power from both sides in serpentine drives and have neoprene teeth that engage the pulley grooves for precise synchronization from both sides of the belt for long life. For general-purpose applications requiring low to moderate amounts of torque.

H Series—Heat-resistant neoprene teeth provide full surface contact between belt and pulley for smooth operation and the seamless construction reduces vibration. For general purpose applications requiring low to moderate amounts of torque.

HT Series—Belts have teeth with a curved profile that provides more strength and produces less backlash (the clearance between the timing belt teeth and timing belt pulley grooves) than trapezoidal-tooth timing belts. For use on power tools, postal equipment, sewing machines, ticket dispensers, vacuum cleaners, and vending machines.

Note: 50mm, 85mm, and 115mm wide timing belts are available on Grainger.com; search for "timing belts" and Filter Results by desired width.

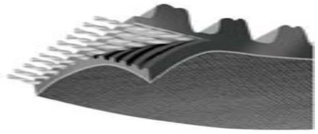
Continental ContiTech

Timing Belts

- For timing belt pulleys, see page 114

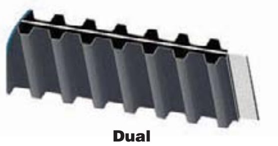
Versatile positive drive belts combine the advantages of V-belts with chain and gear for power transmission belting that is efficient and precisely accurate. They are engineered to be adaptable to almost any type of drive, from printers to heavy industrial milling machines and grinders.



Falcon Pd

Hawk Pd

Conti Synchrochain Carbon



Dual Hi-Performance Pd

FALCON PD

Designed to handle applications with increased horsepower and low torque, as well as those requiring backside idlers. High-grade rubber blend compound is formulated to resist tooth deformity, increase tooth rigidity, and withstand much higher temperatures than polyurethane belts.

CONTI SYNCHROCHAIN CARBON

Developed for extreme applications that require reliable transmission of large power outputs, high torques, and high speeds, or with high dynamic stressing. Belts allow reverse flexing in multipulley drives. Compatible with other heavy-duty profiles.

HAWK PD

Universal-profile belts made with advanced compounded materials are designed to fit the majority of high-capacity synchronous drive requirements.

Note: 85mm Hawk Pd timing belts are available on Grainger.com.

DUAL HI-PERFORMANCE PD

Double-sided belts provide compactness and greater horsepower capacity in precision drives with synchronized reverse-rotation drive shafts. Specialty rubber compound has excellent oil, heat, ozone, and abrasion resistance, for extended belt life.

SILENTSYNC SERIES

Self-tracking timing belts feature an aramid cord so they don't need retensioning and have helical teeth for quiet operation and less vibration in low noise and low vibration drive systems. These industrial timing belts are suitable for use in horizontal drives and the nitrile rubber construction resists coolants, oil, and ozone.

Note: Additional size Continental ContiTech timing belts are available on Grainger.com.

Fenner Drives® EAGLE POLYURETHANE BELTING & O-RINGS

Eagle Round Belting

- Temp. range: -22° to 150°F
- Sold in 100-ft. lengths

Polyurethane belts can be cut to required length; weld endless or use connectors for hollow-core belts to extend length. Smooth belts are FDA compliant. Solid-core metal-detectable belting is used in food processing and pharmaceutical applications.

EAGLE POLYURETHANE BELTING & O-RINGS

Eagle Twisted O-Rings

- Clear, smooth texture, Shore A 85 hardness
- Sold in packages of 50

Quick-connect polyurethane twisted O-rings are a great fast-fit solution for live roller conveyors. No need to dismantle drive components, providing an easy way to avoid system downtime. Metal hooks are included.

Gates®

1NKK4

Round Endless Belts

- Temp. Range: -30° to 140°F

Allow minimal stretch and have no splice, making them extra durable and efficient. Made from rubber with nylon reinforcement cords and designed for 1-quarter turn or twisted drives where more than an O-ring is required. Also suitable for serpentine drives, power turn and line shaft conveyors, and commercial sewing machines.

Used for Round and V-Belts	5700539	**5HYN7**

Fenner Drives® EAGLE POLYURETHANE BELTING & O-RINGS

Eagle Belt Heating Tool

This belt heating tool can join all Eagle non-reinforced belting and some reinforced polyurethane belting. Device allows you to apply heat to the 2 ends of a length of belting, and then join the belt ends for a completed belt. Tool comes with a holder and 2" blade. 120V.

Description	Item No.
Heat Iron Complete, Tip And Paddle, For Use With Butt Welding Kit	**33Z789**

Congress DRIVES

Variable-Pitch Adjustable Die-Cast V-Belt Pulleys

- Zamak/zinc alloy
- Solid construction

Precision-machined threaded mating sections provide as much as 30% downward adjustment in pitch diameter for setting precise speed. Zamak/zinc alloy resists wear and corrosion. Include socket-head setscrews.

Congress DRIVES

Fixed-Bore Die-Cast V-Belt Pulleys

- Zamak/zinc alloy

Precision sheaves have machined grooves and bores for high concentricity. Zamak/zinc alloy resists wear and corrosion. Include hollow-head setscrews. Pulleys 6" dia. and larger are spoke construction to further reduce weight. All bores above ½" (except 54XN22) have keyways, see chart on page 119.

Find more information on Standard Keyway and Setscrew Machining on page 119.

54XM91

Congress DRIVES

3- and 4-Step Fixed-Bore Die-Cast V-Belt Pulleys

- Zamak/zinc alloy
- Reducer bushing included
- Solid construction

Bore and grooves are machined together to provide high concentricity. Use in pairs (1 inverted), in any combination, for effective speed regulation. Will fit a ⅝" or ½" dia. shaft. Designed for use with 4L or A Type V-belts. Pitch dia. is 0.15" less than outside dia.

Timing Belt Pulleys

- For XL, L, and H timing belts, see page 106

No-slip positive drive pulleys with wide belt speed and load capacity ranges maintain a constant speed ratio.

Plain Bore—For light-duty applications up to ¼ HP. Aluminum material. Each includes 2 hollow head setscrews; no keyway.

- Standard keyway and setscrew machining guide located on page 119

Bushed Bore—Steel material. Select ⅜" pulleys for applications up to 4 HP, ½" pulleys for applications up to 20 HP.

- Require bushings; order separately on page 115

Continental ContiTech

Timing Belt Pulleys

- 8mm pitch
- Timing belts sold separately on page 107
- Bushings sold separately on page 115

Positive drive-tooth engagement eliminates slippage and speed variation. Cast-iron pulleys provide uniform speed transfer.

Note: Additional sizes of Continental ContiTech Drive Timing Belt Pulleys are available on Grainger.com.

QT Series

F Series

TB Wood's Incorporated

Quick-Detachable Bushings

- Taper: 3/4" per ft.

Split through flange and taper to provide a true clamp. All series except for JA and QT have a setscrew over the key to help maintain the bushing's position until the screws are tightened. For use with sheaves, sprockets, and pulleys.

PowerDrive

Split-Taper Bushings

- Taper: 3/4" per ft.

Solid flange and an external key on the bushing provides positive drive, except series G. For use with sheaves, sprockets, pulleys, gearbelt pulleys, and chain couplings. Include cap screws.

Roller Chain and Individual Links

Dayton TSUBAKI

Hardened carbon steel construction. Fully interchangeable with other ANSI roller chains. Factory preloading, lube-grooved bushings, and prelubrication minimize wear elongation. 1 connecting link included for every 10 ft. of chain. Meets or exceeds all ANSI requirements.

Additional sizes and styles of roller chain are available on Grainger.com.

Lube-Free Lambda—Oil-impregnated bushings, coated pins, and solid rollers. Maximum allowable load is the same as standard roller chain.

British Standard—Conforms to ISO 606, DIN 8187, and BS 2280 dimensions.

Heavy—Chain features thicker side plates for increased working load and fatigue resistance.

Conveyor—Designed specifically for transport applications such as material handling, packaging, road building machinery, commercial bakeries, bottlers, and farm equipment.

Connecting, Offset, and Roller Links—
Connecting links join 2 ends of chain together. Sizes 25 to 60 assemble with spring clips. Size 80 and higher, as well as Heavy and Curved connecting links, assemble with cotter pins.

Offset links are used for strands when an odd number of chain links is required.

Roller links serve as replacements for damaged roller links.

Corrosion-Resistant Roller Chain and Individual Links

Each 10-ft. length includes 1 connecting link.

Neptune—Resists corrosion in difficult environments including seawater spray. Chromium-free topcoat protects chain from impact and provides superior rust resistance. Zinc-and-aluminum undercoating ensures maximum corrosion resistance with the same strength as standard ANSI chain.

Nickel-Plated—Useful for decorative applications or in moderately corrosive environments and outdoor conditions. Not suggested for direct food contact.

304 Stainless Steel—Excellent for corrosive conditions involving food, saltwater, chemicals, and pharmaceuticals.

Roller Chain Tools

Chain Detachers allow you to disassemble the roller chain to add or remove links to the length of chain. **Chain Pullers** can pull the open ends of the roller chain close enough together to ease the insertion of connecting links.

Single-Strand Fixed-Bore Sprockets

ANSI standard sprockets for use with standard roller chain. Constructed of high-carbon and heat-treated steel alloy. Standard keyway (see page 119 for more info.) and 2 setscrews included. Setscrews are directly over keyway and 90° from keyway, unless noted. The 3/8" and 1/2" bore sizes have no keyway. Additional sprockets available on Grainger.com.

TSUBAKI

Single-Strand Bushed-Bore Sprockets

- Bushing required, see page 115 or Grainger.com

ANSI standard sprockets for use with standard roller chain.
Constructed of hardened high-carbon, heat-treated steel alloy.

Quick Detachable 5XXW9

Taper-Lock 5XXN1

Split Taper 5PTW5

Standard Keyway and Setscrew Machining Guide

Dia. of Shaft	Keyseat Width x Depth	Dia. of Setscrew †
5⁄16 - 7⁄16"	3⁄32 x 3⁄64"	#8-32"
½ - 9⁄16"	⅛ x 1⁄16"	#10-24"
⅝ - ⅞"	3⁄16 x 3⁄32"	¼"
15⁄16 - 1 ¼"	¼ x ⅛"	5⁄16"
1 5⁄16 - 1 ⅜"	5⁄16 x 5⁄32"	5⁄16"
1 7⁄16 - 1 ¾"	⅜ x 3⁄16"	⅜"
1 13⁄16 - 2 ¼"	½ x ¼"	½"
2 5⁄16 - 2 ¾"	⅝ x 5⁄16"	⅝"
2 13⁄16 - 3 ¼"	¾ x ⅜"	¾"
3 5⁄16 - 3 ¾"	⅞ x 7⁄16"	¾"
3 13⁄16 - 4 ½"	1 x ½"	¾"
4 9⁄16 - 5 ½"	1 ¼ x ⅝"	¾"
5 9⁄16 - 6 ½"	1 ½ x ¾"	1"
6 9⁄16 - 7 ½"	1 ¾ x ⅞"	1"
7 9⁄16 - 8 15⁄16"	2 x 1"	1"
9 - 10 15⁄16"	2 ½ x 1 ¼"	1"

† Setscrew size may vary depending on hub wall thickness. As a general rule, the hub wall over the keyway should be equal to or greater than the dia. of the setscrew.
Note: Maximum bore guidelines should be adhered to in order to ensure maximum product quality standards.

Single-Stranded Plain-Bore No Hub Sprockets

TRITAN

These plain-bore sprockets have a starting bore, or center hole, that can be machined to the correct size of the shaft. They are steel construction with a black oxide finish for corrosion resistance. Sprockets offer more mounting options and are often used in applications that require customization. For our larger assortment, go to Grainger.com and search for "plain-bore roller chain sprockets".

Dayton RULAND

1-Pc. Clamp Shaft Collars and Collar Sets

- Ruland: TIR <0.002" (0.05mm)
- Ruland collars are RoHS2 and REACH compliant

Design wraps tightly around the shaft for even distribution of clamping forces without the shaft damage caused by set screws, and with greater holding power. Forged clamp screws meet or exceed ANSI standards. Black oxide-coated steel and aluminum have alloy socket cap screws. Stainless steel has stainless steel socket cap screws. Threaded collars offer superior axial holding power compared with smooth bore units and are easier to install and adjust. Ruland collar materials are sourced exclusively from North American mills.

Adjustable Drill Depth Stop Collar Sets—Include seven 1-pc. clamp-style shaft collars (from ⅛" to ½" in 1⁄16" increments) with hex wrenches in a sturdy plastic box.

Ruland Black Oxide 1215 Lead-Free Steel

Ruland 2024 Aluminum

Ruland 303 Stainless Steel

Dayton RULAND Carefully Made Shaft Collars and Couplings

2-Pc. Clamp Shaft Collars

Wrap around hard or soft shafts without marring. Easy to install without having to disassemble machinery or components. Black oxide-coated steel and aluminum have alloy socket cap screws; stainless steel has stainless steel socket cap screws.

Ruland—Collars are made exclusively from North American bar stock and mated throughout the manufacturing process to assure a proper fit. Machined to a burr-free finish. High-grade forged screws meet or exceed ANSI standards.

- TIR <0.002" (0.05mm)
- RoHS2 and REACH compliant

Set Screw Rigid Couplings

For soft or predrilled shafts in applications where alignment is critical, no backlash is desired, and flexibility is not required. Lock onto shaft by tightening alloy cup point socket set screws. Dayton brand has 2 screws. Ruland brand rigid shaft couplings are precision honed with 4 screws.

Dayton Zinc-Plated Steel without Keyway

Ruland 1215 Black Oxide Lead-Free Steel with Keyway

1- and 2-Pc. Clamp Rigid Couplings

- Max. rpm: 4000
- Black oxide steel

For applications where alignment is critical, no backlash is desired, and flexibility is not required. Wrap around hard or soft shafts without marring. Utilize vibration-resistant socket cap screws. The 2-pc. designs are easy to install; no need to disassemble machinery or components.

RULAND
Carefully Made Shaft Collars and Couplings

1- and 2-Pc. Clamp Rigid Couplings

- Max. rpm: 4000
- Tolerance: +0.002"/0.0005"

For applications in which alignment is critical, no backlash is desired, and flexibility is not required. The couplings wrap around hard or soft shafts without marring. Honed straight bores improve accuracy. Nypatch-coated hardware resists loosening caused by vibration. Utilize vibration-resistant socket cap screws. Black oxide-coated steel couplings have alloy screws; stainless steel couplings have stainless steel screws. All are RoHS2 and REACH compliant.

1-pc. couplings are machined from solid bar stock sourced exclusively from North American mills.

2-pc. couplings are easy to install without having to disassemble machinery or components. An opposing screw design improves balance and allows operation at higher speeds.

** To complete manufacturer model number substitute "F" for black oxide and "SS" for stainless steel.*

TB Wood's Incorporated

Sure-Flex Plus Sleeve Couplings

- Max. angular misalignment: 1° with EPDM sleeves, ¼° with Hytrel sleeves
- EPDM temp range: -30° to 275°F (-34° to 135°C)
- Hytrel temp. range: -65° to 250°F (-54° to 121°C)

Elastomer-in-shear design offers exceptional torsional flexibility to help protect equipment from misalignment, vibration, and shock loads. No lubrication required.

Note: A complete coupling consists of 2 flanges and 1 sleeve, sold separately.

Coupling Flanges

- Type 3J, 4J, and 5J: sintered carbon steel
- Type 6J and all S: cast iron
- Each has a keyway and 2 set screws

Coupling Sleeves

- JE: 1-pc. solid EPDM rubber
- JES: split 1-pc. EPDM
- E: 2-pc. EPDM rubber with retaining ring
- H: 1-pc. molded Hytrel
- HS: 2-pc. molded Hytrel

TB Wood's Incorporated

Dura-Flex Shaft Couplings

- Temp. range: -40° to 200°F

Split-in-half design allows easy element installation without disturbing shaft connection; no need to move connected equipment. 100% part-for-part interchangeable with popular bonded tire couplings, with design, materials, and construction that are superior to common orange polyurethane coupling elements. The couplings accommodate shaft misalignment and minimize vibration to help prevent damage to connected equipment, and offer a large range of spacing with few parts.

Note: A complete coupling assembly consists of 2 hubs and 1 element, sold separately. Taper-Lock® coupling hubs require Taper-Lock® bushings.

Sintered Iron Coupling Hub

Hytrel Spider Insert

Dayton

Jaw Couplings

L-type couplings are designed for close-coupling applications.

Coupling Hubs—Maintenance-free couplings connect to drive shafts to provide dependable power transfer, even in high-temperature applications. Plated metal construction requires no lubrication. Simple design helps assure easy installation and consistent performance. Coupling keyway dimensions conform to DIN 6885, JIS B 1310-1976, UNI 6604-1969, USAS B 17.1-1967, GB 1095-1979 standards.

- Max. angular misalignment: 1°
- Max. parallel misalignment: 0.015"

Spider Inserts—Oil- and high temperature-resistant inserts conform to the sintered alloy couplings to help them maintain position and structure for equal power transfer.

- Temp. range: -40° to 100°C (Buna N); -51° to 121°C (Hytrel)

Note: a complete assembly requires 2 hubs and 1 spider, sold separately.

Bost-Bronze Spider Insert

Steel Coupling Hub

Boston Gear

Jaw Couplings

Coupling Hubs—3-jaw insert design is complete with keyway and set screw. No lubrication required.

- Standard tolerance: +0.001/-0.000", all bore dimensions

Note: A complete assembly requires 2 hubs and 1 spider, sold separately.

Bost-Bronz Spider Inserts—Recommended for high-torque loads, particularly at slower speeds.

- Oil-impregnated
- Temp. range: -60° to 250°F (-51° to 121°C)

Synthetic Rubber Spider Inserts—Recommended where minimal noise is desired, particularly at motor speeds.

- Oil-resistant
- Temp. range: -32° to 200°F (-35° to 93°C)

Polyurethane Spider Inserts—Recommended where moderate-to-heavy shock loads are encountered.

- Temp. range: -32° to 200°F (-35° to 93°C)

How to Determine Keyways and Spiders for Jaw Couplings

Spider Selection Procedure

1. Select a Service Factor (SF) based upon the load classification.
- Uniform = SF of 1.00
- Moderate Shock = SF of 1.75
- Heavy Shock = SF of 2.50

2. Determine design load.
- Design Torque = Application Torque (T) x SF or Design HP = Application HP x SF
- T = [HP(63025)]/rpm

3. Select coupling size that has a HP rating equal to or greater than the design load.

Keyway Chart

Use the coupling's bore diameter to determine the required keyway.

Bore	Keyway	Bore	Keyway	Bore	Keyway
½"	⅛ x ¹⁄₁₆"	1¼"	¼ x ⅛"	2⅛"	½ x ¼"
⅝"	³⁄₁₆ x ³⁄₃₂"	1⅜"	⁵⁄₁₆ x ⁵⁄₃₂"	2¼"	½ x ¼"
¾"	³⁄₁₆ x ³⁄₃₂"	1½"	⅜ x ³⁄₁₆"	2⅜"	⅝ x ⁵⁄₁₆"
⅞"	³⁄₁₆ x ³⁄₃₂"	1⅝"	⅜ x ³⁄₁₆"	2½"	⅝ x ⁵⁄₁₆"
1"	¼ x ⅛"	1¾"	⅜ x ³⁄₁₆"	2¾"	⅝ x ⁵⁄₁₆"
1⅛"	¼ x ⅛"	1⅞"	½ x ¼"	2⅞"	¾ x ⅜"
—	—	2"	½ x ¼"	3⅜"	⅞ x ⁷⁄₁₆"

Jaw Couplings

An economical choice that's 100% interchangeable with industry-standard L-jaw couplings. No lubrication required. Standard keyway on ⅝" and larger bore sizes; 4X177, 3KX86, and ¼" to ½" coupling hubs have no keyway (except where footnoted). Spiders have 0.015" max. parallel misalignment. Buna N and urethane spiders have 1° max. angular misalignment and Hytrel have ½°.

Note: A complete assembly requires 2 hubs and 1 spider, sold separately.

TB Wood's® Incorporated

Buna N Spider Inserts—Made of oil-resistant, long-life material with excellent flexibility.
- Temp. range: -40° to 212°F (-40° to 100°C)

Urethane Spider Inserts—Provide 1.5-times greater torque capability than Buna N but with less dampening. Good resistance to oil and chemicals.
- Temp. range: -30° to 160°F (-34° to 71°C)

Hytrel Spider Inserts—Provide 2.5-times greater torque capability with excellent oil and chemical resistance compared with Buna N and urethane.
- Temp. range: -60° to 250°F (-51° to 121°C)

Selection Guide for Universal Joints

Step 1: Find the appropriate correction value for your particular application using the Correction Factor table on the the right. The table is based on "intermittent" application—more than 1 start/stop per hr., with sufficient time for cooling before starting. If your application is continuous—sustained operation with less than 1 stop/start per hr. for up to 8 hr. per day—multiply the value in the table by 2.

Step 2: Multiply your specific torque requirements by the correction value found in Step 1. (Be sure to use in.-lb.)

Step 3: Refer to the "Static Breaking Torque" column in the Universal Joints table to select a joint (solid type or bored type) with the same or greater torque than the in.-lb. number you calculated in Step 2.

Universal Joints

Special tapered shape of yokes provides exceptional strength, while allowing full free movement of joint. Standard industrial-type universal joints have pin-and-block design as well as boot-retaining grooves. For applications with angles up to 25° and speeds up to 1750 rpm (6000 rpm for needle-bearing units). Stainless Steel is grade 303.

KEYSHAFT™

Keyed Shafting

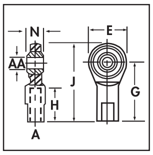
- Dia. tolerance: -0.0005"/-0.0035"
- Key width tolerance: +0.003"/-0.000"
- Straightness tolerance: 0.012" per ft.

All material is furnished as cold-drawn, ground, and polished. Manufactured to ANSI B17.1-1967, R1973 standards.

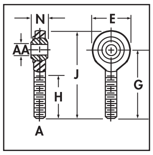
Stainless Steel, Type 304/316—Corrosion-resistant shafting is suitable for use in food processing applications. Meet ASTM A-276/479, cond. A and QQ-S-763, cond. A specifications.

Aluminum—Lightweight, screw machine-grade aluminum is ideal for robotic applications.

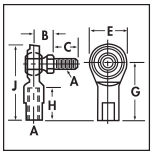
Carbon Steel, Grade 1045—Grade 1045 steel is tougher than basic low-carbon steel, but can still be easily machined for secondary operations. Meet ASTM A-108.



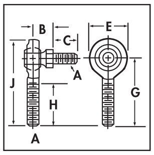
Female, Plain Ball



Male, Plain Ball



Female, Studded Ball



Male, Studded Ball

Steel Spherical Rod Ends

Rod ends allow pivoting in the housing to compensate for misalignment in industrial applications. Metric sizes are available on Grainger.com.

Note: Not for automotive or aircraft use.

Economical—Feature a precision-ground, chrome-plated hardened 52100 steel spherical ball and 1045 carbon steel body.

Stainless Steel—Feature a precision-ground, hardened 440C stainless steel ball and 300 Series stainless steel body with bonded PTFE fabric race. Excellent for low to moderate load applications where lubricating the parts is not desirable.

Self-Lubricating—Feature a precision-ground, chrome-plated hardened 52100 steel spherical ball, 1045 carbon steel body, and nylon/PTFE compound molded race. Ideal for low to moderate load applications where parts lubrication is not desirable.

Bearing Selection Guide

Factors to consider include unit costs, desired life, load ratings, operating environment, maintenance, and mounting configurations. Testing in the actual operating environment is recommended to determine if a particular bearing unit is suitable for a given application.

LOAD RATINGS FOR BALL BEARING UNITS

Dynamic load capacity is the max. constant radial load that a bearing can support for 1 million revolutions (at 33⅓ rpm for 500 hr.). **Static load capacity** is the max. static load (nonrotating shaft) that a bearing can support without causing permanent deformation. **Max. speed ratings** are based on light loads and expressed by bore size: ½" = 6000 rpm, ⅝" = 5000 rpm, ¾" = 4500 rpm, 1" = 3500 rpm.

LOAD RATINGS FOR BRONZE AND UHMW-PE BEARING UNITS

Bronze and UHMW-PE bearings do not have moving parts and allow for smooth, low-friction motion between 2 solid surfaces. Their load capacities are expressed as a PV factor, which is calculated by multiplying P, the max. pressure in psi on the bearing surface, by V, the max. sliding velocity in surface ft. per min. on the shaft. Actual **PV factor** should not exceed rated max. PV. P and V are calculated using the following formulas:

$$P = \frac{\text{Bearing Load}}{\text{Bearing Dia. X Bearing Length}}$$

V = Shaft Diameter x Shaft rpm x 0.262*

* 0.262 is the constant used for sleeve bearings (dimensions in inches).

Dayton

Pillow Block and Flange Mount Bearings

BALL BEARINGS

Prelubricated ABEC-1 tolerances. Wide inner race with setscrews. Neoprene seal. Temp. range: -30° to 200°F.

Rigid Type—Strong load support in limited mounting area.

Self-Aligning Type—Corrects misalignment up to 2°. Rustproof plated finish. Base mount is 2-pc. and flange mount is 1-pc.

BRONZE BEARINGS

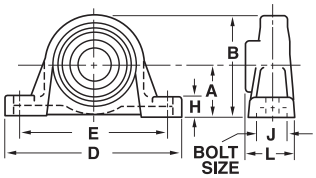
Porous for continuous lubrication. Use in lighter-duty mounted bearing applications. Temp. range: -5° to 220°F.

Rigid Type (Pillow Block Only)—Press-fit plain sleeve bearings. Oiler hole for lubrication.

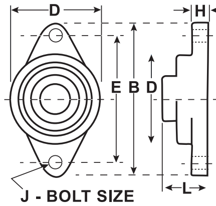
Self-Aligning Type—Press-fit flanged sleeve bearings. Rustproof plated finish. Large, felt-lined oil reservoir. Oil fillers on base-mount models can be rotated to 4 different positions. Flange-mount models have oil filler at 45° from bolt holes.

UHMW-PE BEARINGS

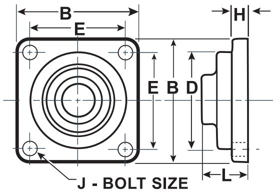
For washdown applications in wet/harsh environments. Self-lubricating. Interchangeable with most metal units. Temp. range: -60° to 180°F. USDA and FDA approved.



Pillow Block



2-Bolt Flange Mount



4-Bolt Flange Mount

Pillow Block

4-Bolt Flange

2-Bolt Flange

Mounted Ball Bearings

NTN

- Temp. range: -20° to 250°F

Feature cast-iron housings. Elastomeric seal with "flinger" preserves lubricant and keeps contaminants out. Ultra-Class units have solid base construction for optimum load and shock stability and black oxide coating for superior environmental protection.

Mounted Ball Bearings

- Temp. range: -20° to 200°F
- 52100 Grade 10 chrome steel ball bearings

Pillow block and flange-mount bearings are prelubricated and regreaseable with a rubber seal and cast-iron housing. Rubber-mounted bearings are lubricated, not regreaseable, and feature a rubber seal and housing.

Nickel-Plated Bearings—For corrosive environments or where a decorative finish is preferred.

Air Handling and Rubber-Mounted Bearings—Designed to reduce noise and vibration in HVAC applications. Rubber mounted 52100 chrome steel ball bearing features rubber seals and is designed to reduce noise and vibration in HVAC applications.

Corrosion-Resistant Mounted Ball Bearings

NTN

- Setscrew locking
- Temp. range: -4° to 230°F for thermoplastic (PBT) housing units
- Temp. range: -4° to 248°F for stainless steel housing units

Solid, flat base construction prevents buildup of particles in difficult to clean areas. Self-aligning design provides optimal performance under high rotational speeds. Replacement inserts are interchangeable; stainless steel inserts offer superior corrosion resistance compared with zinc-plated inserts.

Note: See the extended product offering on Grainger.com. For additional end caps, search for "bearing accessories." For additional stainless steel items, search for "stainless steel" and the product category, such as "stainless steel insert bearings."

Tapered Roller Bearings

Carry maximum combinations of radial and thrust loads simultaneously. Feature roller guiding inner ring construction. Roller bearing cones have steel cages and are nonlubricated. Use in lower-speed applications where there is a high degree of thrust or radial load, shock loads, and/or alternating thrust and radial loads.

Note: When replacing bearings, replace both cone and cup to ensure optimum performance and longer life.

Tapered Roller Bearing Assemblies

Commonly used in vehicles where the wheel bearings must handle large vertical (radial) and horizontal (axial) forces at the same time. Held together by an inner race that has a tapered surface for the bearings to roll against, and a flat inner radial surface to slide over a shaft. The outer race is the opposite design with the inner surface that's tapered, and the outer surface being flat. These tapered roller bearing assemblies are case-hardened steel construction and resist heat, heavy loads, humidity, and shocks. Suitable for use in hydraulic engines, gear motor transmissions, and locomotive axles.

Find the Bearings You Need on Grainger.com

Ball Bearing 35JC74

Roller Bearing 1YUA7

Slewing Ring 4LFR7

Spherical Bearing 45GY14

- Standard and metric sizes
- Automotive, marine, machining, robotics, semiconductor production, and more
- Popular brands you can trust

Grainger carries a wide range of bearings and bearing accessories for industrial and commercial applications—from agricultural disc bearings and angular contact bearings to unground radial ball bearings and wear sleeves, with plenty of choices in between. Click "Bearings" under Power Transmission on **Grainger.com**.

SMITH Bearing® Manufactured by A:C accurate bushing company

Cam Followers

Feature materials and finishes that provide minimum friction. Outer race is high-carbon chrome bearing steel, hardened and ground; inner race is low-carbon alloy steel, carburized and case hardened on raceway area. Full complement needle rollers are made from high-carbon chrome bearing steel, hardened, ground, and lapped. Additional styles and sizes are available on Grainger.com.

Stud Type and Heavy Stud Type—Stud Type models are for loads and shock that are moderate. Heavy Stud Type is for applications with high loads and/or heavy shock and where deflection is low.

Yoke Type—Features an inner race made for shaft or clevis mounting.

Double Shielded 1ZGD8

Double Sealed 1ZGE4

Dayton

Single-Row Radial Ball Bearings

- Operating temp. range: -65° to 250°F

Motor-quality low-friction, 52100 chrome steel industrial ball bearings are suitable for radial and thrust load applications that require precise low-torque rotation. Use flanged bearings for easier plate mounting. Noncontact, stainless steel shields reduce contamination without adding drag. Light-contact rubber seals protect the bearing, but with slightly higher drag. All are lubricated with general-purpose grease. Meet industry standard ABEC specifications.

Single-Row Radial Ball Bearings

NTN

Prelubricated, permanently sealed bearings offer a lifetime of quiet, maintenance-free operation. Seal is made of synthetic rubber molded to a steel plate. V-shaped groove acts as a "flinger" to keep dirt out. Shielded bearings have a shield made of rust-resistant metal. Cages constructed of pressed steel. Bearings are individually wrapped and boxed to protect from contaminants during shipping and storage. Meet or exceed industry standards.

Double Sealed

Needle Roller Thrust Bearings

Needle Roller and Cage Assemblies—Consist of an axial cage with needle rollers. Support axial loads in 1 direction. Use directly with surrounding hardened faces or separate thrust washers to provide the most compact thrust solution.

Thrust Washers—Use as fatigue liners for soft housing faces. Combine with needle roller and cage assembly to form a complete needle roller thrust bearing.

INA

Spherical Plain Bearings

4ZZT9

ELGES double-sealed, spherical plain bearings support high radial loads with shocks that would damage rolling element bearings. Transmit motion and loads, but allow pivoting to prevent stress on adjacent structure. Suitable for supporting hydraulic cylinder connections to structures that can warp or twist. Maintenance type has lubrication holes and grooves on inner and outer components allowing grease to be pumped through the shaft or housing.

Bronze Sleeve Bearings/Bushings

Additional styles and sizes are available on Grainger.com.

SAE 841: Oil-Impregnated—Sintered bronze bearings conform to ASTM chemical and physical properties. Vacuum-impregnated with SAE 30 oil that provides lubricant which is metered from the bearing to the shaft during rotation.

- Max. PV: 50,000
- Temp. range: 10° to 220°F

SAE 660: Cast-Bronze—Machined from continuous-cast C93200 bronze. Provide a uniform bronze structure throughout the bearing, free from porosity and hard particle inclusions.

- Max. PV: 75,000
- Temp. range: -40° to 500°F

Induction Bearing Heaters

- 60 Hz

Can be used on bearings, sprockets, gears, couplings, and sleeves. Raising blocks lift bearing heater crossbar to accommodate larger diameter bearings. 45ZM98 includes heat protective gloves rated to 300°F.

General Purpose Linear Actuators

- Linear motion: 10" to 12"; can be modified to shorter stroke lengths
- 115VAC, 60 Hz PSC motor
- Automatic thermal protection
- Limit switches: adjustable
- Duty cycle: 25%, 1 min. On/3 min. Off max.
- Single right-hand Acme screw

Adjustable internal limit switches provide control in positioning applications. For additional stroke modification, remove outer and translator tubes and replace with included driver nut. Single-lead, rolled-thread lifting screw for long life and smooth operation. Built-in worm gear is set for quiet gear reduction. Outer tube protects screw and nut from dust. Includes capacitor.

Duff-Norton

Compact Linear Actuators

5FTD8

- Die-cast aluminum housing
- Aluminum inner and outer tubes; inner tube is keyed and polished
- Limit switches: nonadjustable
- Duty cycle: 20%
- Self-locking Acme screw gear drive
- Clevis mount
- IP66 sealing protection

Internal limit switches are factory-preset.

CONTROLLER/POWER SUPPLY

Use for AC applications. Features 120VAC input and 3 x 24VDC outputs. Use with 5FTF2 to 5FTF8 actuators only. Battery backup. 6-ft. AC cable. Use 5FTJ5 to connect actuator to controller/power supply. Actuator movement is not synchronized. If using multiple actuators on 1 controller, load must not exceed capacity of a single actuator.

HANDSET

Features 2 buttons with up/down arrows and snap-on hook. For use with Controller/Power Supply 5FTJ2 only. 5-ft. cable.

Linear Actuators

K2 Series

M-Track Series

Warner Linear

- Aluminum alloy housing
- Totally enclosed nonventilated motor
- 25% duty cycle
- Clevis mount

M-Track 1 Series—Compact, self-contained design is excellent for use in small spaces. Typical uses include throttle control, air vent opening, remote window/mirror positioning, and gate opening.

- Max. ambient temp.: 150°F
- Limit switch: nonadjustable

K2 Series—Hybrid nut and screw design requires no brake. Intended for severe applications such as fertilizer gate control, mower decks, and implement lifts.

- Max. ambient temp.: 140°F
- Load-limiting clutch: nonadjustable

K2X Series—Ball screw with load control wrap spring brake. Excellent for severe, high-load applications such as commercial mower decks, spray booms, and construction equipment.

- Max. ambient temp.: 140°F
- Load-limiting clutch: nonadjustable

Duff-Norton

Industrial-Duty Linear Actuators

- Higher speeds and duty cycles
- Aluminum housing
- Can replace pneumatic and hydraulic cylinders
- Limit switches and clutch: adjustable
- Double male clevis mount

Dependable systems are designed to handle the rated load in tension and compression applications. Fast installation. Belt-driven models have a stainless steel translating tube. Gear-driven actuators have a zinc-plated translating tube. 12VDC models have permanent magnet motors. 115VAC thermally protected actuators have 60-Hz permanent split capacitor motors.

** Duty cycle is based on 75°F ambient temperature. To prevent motor overheating, the actual operating time should be equally spaced throughout any period of elapsed time.*

Duff-Norton

Commercial-Duty Linear Actuators

- Lower duty cycles
- Die-cast aluminum housing
- Can replace pneumatic and hydraulic cylinders
- Limit switches: adjustable

Clevis-mount models have nonventilated enclosures. They feature a cross hole in the extension tube to speed installation. AC models have totally enclosed, permanent split capacitor motors with auto thermal protection and onboard capacitor. DC models have permanent magnet motors without thermal protection.

2DGF8 motor is totally enclosed nonventilated. The actuator installs easily with pipe mount on the housing and a spherical rod end on the extension tube.

Dayton VIBCO VIBRATORS

Electric Vibrators

Dayton—Quiet-operating units have a pressurized aluminum housing and feature prelubricated bearings; oversize vacuum-impregnated windings that withstand vibration and high centrifugal force; and steel end caps. Use in bins, chutes, hoppers, screens, feeders, compaction tables, and concrete pumping.

Dayton Micro models are compact for use in small spaces.

- Force adjustable with eccentric weights (except 1DYN5 is not adjustable)
- Continuous duty at 100% output force

VIBCO 2P and 4P Series—High-heat-resistant winding and oversize bearings help improve safety and extend service life. Terminal box offers easy connection and change of voltage. Meet ASTM and ASME standards.

2P models are designed for use on bins containing fine to granular materials, to pack coarse materials, and to consolidate concrete.

4P models are designed for bins containing lumpy or sticky materials, to pack light fluffy materials, and for typical screen vibrator uses.

- Adjustable eccentrics for easy change of force
- Continuous duty motor
- Oversize electric motor for higher safety factor (watts/lb. impact)

VIBCO Small-Impact Line—Designed to activate small hoppers, screens, chutes, tables and filling machines where a small shake is needed. Compact, noiseless vibrators help provide controlled flow of all materials, including fine powders, flakes, pills, bottle caps, and jars. Meet ASTM and ASME standards.

Heavy-duty 4HR13, 4HR14, 4HR16, and 4HR17 have oversize bearing, and the end bell is cast iron for extra-long life.

- Speed and force can be adjusted with rheostats or speed adjusters
- 4HR18 and 4HR19 have a continuous-duty motor with convenient 115V plugin

VIBCO VIBRATORS

Electric Vibrators with Adjustable Speed and Force

- Continuous duty 950 to 2500 vpm
- Intermittent duty 2500 to 4000 vpm
- 1 phase

Heavy-duty vibrators' easy speed/impact dial control helps keep even hard-to-move materials in motion. The 115V plug fits standard outlets; with the TENV housing, these vibrators are great for outdoor and indoor use.

12VDC Vibrators

Battery-operated units are great for mobile applications. They are totally enclosed, watertight, and weather-resistant for use on farm equipment, heavy dump trucks, tailgate spreaders and salters, concrete pumps, and screens. Also for cleaning and to aid the flow of material from bins and chutes. Big Bertha standard dump truck vibrator 6L765 comes with a wiring and mounting kit.

Pneumatic 4HP68

Electric 4HP70

Internal Concrete Vibrators

Pneumatic—Low-maintenance vibrators offer high force performance with low air consumption and only 1 moving part. Each includes 10-ft. hose.

Electric—Portable, lightweight, and easy-to-carry machines come with a shoulder pack for extra convenience.

- 11,000 vpm
- 115VAC plug-in with waterproof switch

Fluidization Nozzles and Vibrating Bin Aerators

Fluidization Nozzle—Emits a continuous low-pressure air flow to keep dry powders and granular products moving efficiently through bins or silos.

Bin Aerators—Devices combine product aeration with an additional slight vibration on the silo wall to aid flow of fine powdery materials inside silos or bins. Will not damage silos. 24A968 stainless steel construction is for use in more demanding applications.

- FDA 177-2600 Approved

VIBCO VIBRATORS

Hydraulic Vibrators

- Adjustable speed

Unaffected by dirty, muddy, or wet locations, hydraulic vibrators offer a low-cost solution for OEM applications. They produce high-frequency vibration with low noise levels and can be mounted in any position.

6L764

Pneumatic Railroad Carshakers

VIBCO VIBRATORS

- Max. 100 psi
- 1" NPT inlet port

Heavy-duty rotary vibrators can move even the most stubborn materials, with 30% less air consumption than comparable piston vibrators. Lightweight, portable, and easy to handle, they fit all standard wedge brackets on railroad cars. Virtually noiseless operation.

6L764 is designed for unloading grain, cement, and similar materials. It includes an 18" flex hose with muffler and quick-disconnect fittings.

4HV43 handles materials with moisture content as well as salts, clay-lime lumps, and like materials.

VIBCO VIBRATORS

Silent Pneumatic Turbine Vibrators

Vibrators make no more noise than an electric motor. Maintenance-free, no lubrication required. Use 30% less air than comparable pneumatic vibrators and outlast ball and piston vibrators 3 to 1.

VS Series—For rough applications or where exhausted air will not affect production. Simple, compact design.

BVS Series—Threaded exhaust for closed-air environments and other applications where exhausted air must be remotely discharged.

BBS Series—For continuous duty in small applications such as parts feeders, tracks, and foundry matchplates. Versatile 1-bolt mount.

CCF/CCL Series—For heavy-duty applications on large bins, hoppers, chutes, packing tables, screens, and concrete forms.

GIO Series—Can be used with all types of bins that contain fine to granular materials, or for packing coarse materials and unjamming parts in conveyor lines, chutes, and pipes. Corrosion-resistant housing has excellent resistance to solvents. Single-bolt mount for maximum flexibility.

MLT Series—Prelubricated for continuous duty and maintenance-free operation in sanitary applications or where harsh chemicals are present. Threaded exhaust ports seal the system to help you maintain a clean environment. MLTSS HA model vibrator 30FW99 features high amplitude, and is better suited for lumpy or sticky applications. MLTSS HT model vibrator 30FX02 and MLT HT vibrator 30FW95 are suited for higher temperature applications.

MHI Series—Same as MLT Series but designed for intermittent duty, to produce high frequency and maximum forces. MLI HT model vibrator 30FW88 designed for higher temperature applications. Washdown-safe.

Pneumatic Ball Vibrators

DAYTON

Suitable for continuous operation in harsh outdoor conditions with small- to medium-size hoppers, bins, chutes, and pipes. Anodized aluminum housing. Maintenance-free when used with filtered/lubricated air.

VIBCO

Simple ball design is built for rough use and continuous operation on a wide variety of hoppers, bins, and chutes. Clean air and lubrication are recommended for longer life. Threaded exhaust ports.

V and BV Series—V series units are built to fit in minimal space locations. BV series vibrators are designed with industry-standard bolt pattern for easy interchange.

BB Series—Built for small to medium amounts of vibration on laboratory equipment, small hoppers, parts feeders, chutes, and match plates.

Pneumatic Piston Vibrators

DAYTON

Cast-iron vibrators are maintenance-free when used with filtered/lubricated air. Start in every mounting orientation to keep material flowing from bins, hoppers, chutes, and pipes. For sticky, coarse, or high-moisture materials.

VIBCO

High-impact and efficient energy transfer ensure a smooth flow of material through bins, chutes, and weigh batchers. Can be used in any mounting orientation. Lubrication required. For industry, mining, chemical plants, plastics, manufacturing, foundries, and paper plants.

10 Series—Basic vibrators for foundry match-plate applications feature all-steel construction with end-mounted single attaching head.

50 Series—All-steel construction withstands abuse and handles tough flow applications including sticky, high-moisture, and coarse materials. Hardened ground piston for long life. 4HT60 long-stroke, low-frequency version is great for material packing applications.

55 Series—Low-cost, 1-pc. cast-iron housing, and only 3 parts, total.

CLEVELAND

Dual-diameter piston allows units to be mounted at any angle without use of springs. Excellent for automatic parts track vibration, packaging/filling machine, and small bin and hopper applications. Include mounting fasteners and push-fit hose connections for quick setup.

All models have a 304 stainless steel housing. 18K850 and 18K852 have mild steel end caps; for use in manufacturing and packaging industries. 18K851 has 304 stainless steel end caps; well-suited for chemical and pharmaceutical industries.

Fuji Electric Variable Frequency Drives

Fuji Electric

FRENIC-Mini C2 have dynamic torque vector control that calculates the appropriate power based on the motor's load. **FRENIC-EcoPAK** are enclosed drives that are housed with monitoring, bypass, and control options to minimize motor downtime. Packaged solutions communicate with multiple networks. **FRENIC-Eco** fit into tight spaces and feature multiple network compatibility options. **FRENIC-Ace** have dynamic torque vector control that calculates the appropriate power based on the motor's load. OEM drives are customizable to match the configuration of the original manufacturer and ensure consistent performance and proper installation. **FRENIC-5000** have dynamic torque vector control that calculates the appropriate power based on the motor's load. G11 series drives are designed for constant-torque applications in industrial machines, such as conveyance and packaging machinery. P11 series are designed for variable-torque applications such as fans and pumps.

Schneider Variable Frequency Drives

Schneider Electric

Altivar ATV12 are compact and fit into limited space. Baseplate-mounted models dissipate heat into the machine frame. Heat-sink-mounted models dissipate heat through a heat exchanger. **Altivar ATV212** OEM drives are customizable to match the configuration of the original manufacturer and ensure consistent performance and proper installation. **S-Flex 212** are enclosed drives that are housed with bypass configuration options to minimize motor downtime. Preassembled and prewired OEM drives are customizable to match the configuration of the original manufacturer and ensure consistent performance and proper installation. **Altivar ATV320** have two formats: compact and book. Compact drives install into electrical cabinets or mount directly on the machine frame. Book drives have a slim profile and mount side by side with other devices to save space. OEM drives are customizable to match the configuration of the original manufacturer and ensure consistent performance and proper installation. **Altivar ATV340** come in two formats: modular and ethernet. Modular drives support commonly used communication protocols, while ethernet versions support multi-ethernet protocols. Drives are customizable and match the configuration of the original manufacturer to ensure consistent performance and proper installation. **Altivar ATV600** are enclosed drives that are housed with monitoring, bypass, and control options to minimize motor downtime.

5JPF3

Adjustable AC Voltage Supplies

DART CONTROLS

Operable on 60/50 Hz at ±10% rated line voltage. For universal, shaded pole, and PSC (permanent split capacitor) 1-phase AC motors. Suitable for use in fans, blowers, pumps, vibratory feeders, and heating and lighting applications.

Note: Check with motor manufacturer before using. Not for use with split-phase or capacitor-start motors.

CHASSIS

Supplied with speed pot, knob, and dial plate.

NEMA 1

Feature rugged housing, power On/Off switch, power indicator lamp, front-access fuse protection, and input and output cords and plugs.

120VAC

Include a standard male wall plug with 18" cord and female output connector integral to housing.

240VAC

Include 6-ft. input and output cords. Cord leads are prepped for wiring to suitable connector.

PowerXL DG1 40HY76

PowerXL DC1 20RA39

SVX 32WN92

H-Max 32WP26

H-Max IntelliPass & IntelliDisconnect 32WP52

Eaton Variable Frequency Drives

PowerXL DG1 are designed for more demanding general purpose industrial applications such as wastewater treatment and machinery. **PowerXL DC1** are customizable to match the configuration of the original manufacturers and ensure consistent performance and proper installation. More compact than the DA1 and DG1 drives. **PowerXL DA1** are customizable to match the configuration of the original manufacturers and ensure consistent performance and proper installation. **SVX** enclosed drives are housed with monitoring, bypass, and control options to minimize motor downtime. Designed for multiple motor drive systems and high-speed industrial applications. **H-Max** enclosed drives are housed with monitoring, bypass, and control options to minimize motor downtime. Designed for fans, pumps, and fluid-control processes in HVAC. **H-Max Intellipass and IntelliDisconnect** enclosed drives are housed with monitoring, bypass, and control options to minimize motor downtime. Used in demanding fan, pump, and fluid-control processes in HVAC.

SCR DC Speed Controls 5JJ55

DC Motor Speed Controls

PWM DC Speed Controls—Pulse width modulation (PWM) devices adjust voltage pulses to regulate the speed of DC motors. Used for low-voltage devices such as truck-mounted equipment, portable conveyors, and agricultural feeders.

SCR DC Speed Controls— Silicon controlled rectifier (SCR) DC motor controls convert AC voltage to DC voltage, which provides variable speed control for DC motors. Used in applications such as conveyors, packaging equipment, and centrifuges.

Maximum Current	DC Input Voltage	Voltage Output	Rotation	Speed Range	External Switches	Current/ Torque Limit	Overall Width	Overall Height	Overall Depth	Brand	Item No.

DC Tachometer and Pulse Generators

3VU57

Tachometer/Process Meter— Microprocessor-based digital system measure shaft speed lower than 1 rpm and operate as a digital rate meter, timer, or process counter. An onboard microcomputer equipped with sophisticated software, quartz crystal controlled reference frequency, and display updating on every pulse permits accuracy of ±0.04%

- 4-digit ½" LED
- NEMA 4X rating (faceplate with supplied gasket)
- Includes option board for proximity sensor input

Pulse Generators—Provide square-wave pulses with frequency proportional to shaft rpm of unit to which it is mounted. Stainless steel ball bearing, compact Santoprene rubber housing, and 6-ft. rubber-jacketed output cable with 3-wire 18 AWG conductors. Mount directly to motor shaft being monitored using single #10-32 screw.

- Operating temp. range: -10° to 45°C
- Max. shaft speed: 5000 rpm

NEMA Combination Motor Starters and Accessories

SQUARE D by Schneider Electric

- 3-pole, 60/50 Hz, 600VAC max.
- Thermal units sold separately, see page 166
- Class RK5 (600V) fuses on page 178

Motor starter disconnect switches have a flange-operated visible blade switch. Fusible combination starters have a fusible disconnect switch and come complete with fuse blocks for RK5 type 600V fuses. Class R fuse clips sold separately. Circuit breaker combination starters feature a PowerPact motor circuit protector.

IEC Combination Motor Starters

- Short-circuit and motor overload protection
- 3-pole, 60/50 Hz
- 120VAC coil
- Self-protected, Type E
- 1NO auxiliary contact (GE includes 1NC)
- Hand/Off/Auto models have DIN rail-mount terminal blocks for external accessories
- 100VA transformer (where applicable)

Adjustable motor circuit protector eliminates the need for heater elements (thermal units). Starters have visual short-circuit indicator and LED pilot light. UL Listed, CSA Certified.

NEMA Magnetic Motor Starters with Solid State Overload Relays

SQUARE D by Schneider Electric

- Class 10/20 selectable thermal protection
- 3-pole, 60/50 Hz, 600VAC max.
- Accessories and replacement parts on page 163

Full-voltage starters start and stop 3-phase AC motors. Manual push-to-test and visible trip indicator. Trip-free construction allows overload relay to trip even if reset lever is blocked or in the reset position. Overload relay has heaterless construction and adjustable full load amp setting.

Normally open holding circuit contact allows 3-wire control. Angled contacts provide high contact pressure and positive seating. Spring-assisted gravity dropout on de-energizing quickly extinguishes any arcing. UL Listed and CSA Certified.

- Thermal units sold separately, page 166
- Accessories and replacement parts on page 163

Full-voltage starters start and stop 1- and 3-phase AC motors. Manual push-to-test and visible trip indicator. Trip-free construction allows overload relay to trip even if reset lever is blocked or in the reset position.

Normally open holding circuit contact for 3-wire control. Angled contacts provide high contact pressure and positive seating. Spring-assisted gravity dropout on de-energizing contacts quickly extinguishes any arcing. UL Listed and CSA Certified.

Contactor NEMA Size 3

Motor Starter NEMA Size 0

NEMA Magnetic Contactors and Motor Starters

- 3 pole
- Include 1NO aux. contact

UL Listed.

CONTACTORS

For use with resistance heating and capacitor circuits; may be used to control AC motors where overload protection is provided separately.

MOTOR STARTERS

Protect against motor overload on 3-phase motor circuits. Manual weld check. Toolless disassembly. Class 20 overload protection with visible trip indicator and manual reset. Motor starters without electronic overload relays require 3 heaters, see below for selection.

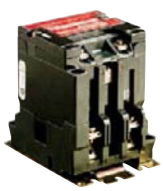
Electrically Held Type L



Electrically Held Type S

Mechanically Held Type LX

Multipole Lighting Contactors

SQUARE D by Schneider Electric

Open-type contactors have 120V coils operable on 50 Hz at 110V, 277V at 60 Hz. UL Listed and CSA Certified.

ELECTRICALLY HELD TYPE L AND MECHANICALLY HELD TYPE LX

Field-convertible contacts have normally open and normally closed indicators. Max. 8 normally closed contacts. Silver cadmium oxide double-break contacts.

ELECTRICALLY HELD TYPE S

Feature mixed load ratings (lighting and motors), factory-wired controls, and clearly marked termination points.

Lighting Contactors

- Rated 30A inductive and resistive
- 7.4"H x 4.2"W x 3.9"D
- Electrically held

Design allows additional power poles to be added to a max. of six 1- or 2-pole blocks. Poles are supplied in the NO position on contactor. Up to 4 power pole blocks are field convertible to NC. UL Listed. Mechanically held contactors have built-in control module delays to minimize excessive operation from faulty control devices.

Motor Logic™ Overload Relays

- 3-phase, 60/50 Hz, 600VAC
- 3:1 current adjustment range
- Class 10/20 selectable thermal protection

Heaterless construction with adjustable full-load amps. Relays are protected against phase loss and phase imbalance. Mount separately or use to retrofit an existing Square D Type S starter. Select overload relay by full load amp current range.

NEMA Manual Motor Starters

SQUARE D by Schneider Electric

- 600VAC max.; 250VDC max.
- Required thermal units sold separately, see page 166
- Auxiliary contacts 1H589 and 1H590 available on page 163

Push-button motor starters provide On/Off operation and overload protection for small 1-phase, 3-phase, or DC motors. For use on small machine tools, pumps, fans, and conveyors. UL Listed.

Note: NEMA Type 12 enclosures can be converted for 3R outdoor use by drilling two ⅛" holes in the bottom.

EATON

Manual Motor Starters

NEMA manual starters provide control and overload protection to single- and 3-phase motors. Feature straight-through wiring and field-mounted auxiliary contacts. Come standard with a lockout device to lock motor in Off position. NEMA rated 1, 4, 7, 9, and 12.

NEMA Fractional Horsepower Manual Starters

SQUARE D by Schneider Electric

- 1-pole 277VAC max.; 2-pole 277VAC/230VDC max.
- Required thermal units sold separately

Provide overload protection and manual On/Off control for small motors. Toggle-operated fractional HP starter for single-phase motors up to 1 HP. 2-pole starters can also be used with DC motors to ¾ HP. Manual reset.

Binder head screw terminals are suitable for #10 or smaller copper wire and are accessible from the front. For use in fans, conveyors, pumps, and small machine tools.

Thermal Unit Selection Guidelines

All thermal unit specifications are based on the motor and controller being operated in an ambient temp. of 40°C (104°F) or less.

A Regular Enclosure is defined as the standard-size enclosure that is included with an "enclosed" starter. The Large Enclosure column should be used when the starter is being installed in an oversized control panel or cabinet.

1. Determine motor full load current (amperage) rating and service factor.

2. Motor and controller in same ambient temp.:

For 1.15 to 1.25 service factor motors, use 100% of motor full load current for thermal unit selection. For 1.0 service factor motors, use 90% of motor full load current for thermal unit selection.

3. Motor and controller in different ambient temp.:

If motor ambient temp. is 18°F higher than motor starter's ambient temp., derate full load current value from step 2 by an additional 10%. If motor ambient temp. is 18°F lower than motor starter's ambient temp., increase full load current value from step 2 by an additional 5%. Use the resultant full load current value for thermal unit selection.

4. Locate the proper thermal unit selection column using the thermal unit code associated with the motor starter.

5. Match motor full load amperage to the closest thermal unit code without going over.

6. Do not exceed amp rating of motor starter.

7. 1-phase starters require 1 thermal unit. 3-phase starters require 3 thermal units.

HUBBELL® Wiring Device-Kellems | SQUARE D by Schneider Electric

NEMA Manual Motor Switches

Nonreversing switches provide On/Off control of 1- or 3-phase AC motors where overload protection is not required or is provided separately. Open switches fit standard single-gang switch boxes and work with any cover plate that has a standard toggle cutout.

All switches rated 1, 1½, 2 HP at 90/115/230VDC respectively. 2-pole, 10 switches rated 2 HP at 115/230V. 3-pole, 30 switches are rated 7½ HP at 230V and 10 HP at 460 to 575V. For use in small machine tools, pumps, fans, conveyors, and electrical machinery. Also for nonmotor loads such as resistance heaters. UL Listed.

Drum Switches

For starting and reversing of motors. Wiring diagram included. Should be used in conjunction with a motor that has overload protection or where no overload protection is required.

DAYTON®

Heavy copper drum contacts and metal enclosure with pressed steel case and frame.

SQUARE D®

Nonmetallic NEMA enclosure. 600VAC max. Field-convertible from maintained to momentary operation.

EATON

IEC Magnetic Motor Starters

- 3-phase applications, 600VAC max., 60/50 Hz
- Electronic overload with Class 10A, 10, 20, and 30 selectable protection
- IP20 rating, NEMA 1 metallic enclosure
- 5:1 overload adjustment range

Feature Eaton XT/DIL M Series motor starter and motor overload protection with Eaton C440 electronic overload. Enclosures are easily mountable, and accessible with only 1 screw to close the enclosure. Come with 1 normally open auxiliary contact for 3-wire control purposes. Feature both manual and automatic reset options as well as selectable trip class. Low-wattage coils. Provide phase loss and unbalance protection. Models with 24VAC and DC coils are available on Grainger.com®. UL Listed.

IEC Contactors and Overload Relays

- IP20 rated
- Contactors rated: -25° to 50°C
- Relays rated: -25° to 65°C

Designed for industrial applications, Eaton XT/DIL M Series heavy-duty contactors and reversing contactors can be combined with electronic overload relays to make a starter. All contactors are available for panel and DIN-rail mounting. 690VAC max., 50/60 Hz. Feature low-wattage coils, auxiliary contacts, front access coil terminals, toolless assembly, and dual clamps for multiwire. Electronic Overload Relays have selectable trip class and phase unbalance, to protect motor life. Feature 5:1 current adjustment, Class 10A, 10, 20, 30 selectable protection, and are self-powered. Status LED indicates the overload operational status. UL Listed, CE Approved, and CSA Certified. ATEX Listed and RoHS Compliant.

IEC Contactors, Motor Starters, and Overload Relays

Dayton

3-Pole Contactor

Overload Relay

Time Delay Auxiliary Contact Block

CONTACTORS

- 3-yr. warranty
- DIN rail or panel mount

For industrial motor control. Mechanical life: 10 million cycles. 3-pole contactors should be paired with overload relays. 9 to 32A 3-pole contactors have 1NO auxiliary contact. 40 to 95A 3-pole contactors have 1NO/1NC auxiliary contacts. UL and C-UL Listed.

OVERLOAD RELAYS

- Bimetallic
- For 3-phase applications
- Compatible with Dayton® IEC contactors

Feature continuously readjustable current settings. Have temperature compensation, tripped indicator, test button, stop button, manual and automatic reset button, finger-safe terminals, and 1NO/1NC contacts. UL and C-UL Listed.

AUXILIARY CONTACT BLOCKS

- Front mount
- Compatible with Dayton® IEC contactors

Allow for additional indicator lights, signals, or alarms.

TIME DELAY AUXILIARY CONTACT BLOCKS

- Front mount
- Compatible with Dayton® IEC contactors

Timer combines with a contactor to create a time delay contactor.

REPLACEMENT COILS

- 60 Hz
- Compatible with Dayton® IEC contactors

Coil can be changed without replacing the entire block.

TeSys™ IEC Contactors and Overload Relays

For industrial motor control applications, combine a contactor with an overload relay to make a complete motor starter. Rated 600VAC. Saddle clamp terminals. DIN rail- or panel-mount. UL Listed, CSA and CE Certified.

CONTACTORS

Inclined wire guides and captive screws. 60/50 Hz coil. IP20 touch-safe with removable terminal cover.

OVERLOAD RELAYS

For 3-phase applications. Bimetallic elements. Class 10 trip characteristics with 1-phase sensitivity. Ambient compensated. Adjustable current range. Lockable, sealable, manual/auto reset, test trip. Mount to underside of contactor.

IEC Mini Contactors

- 3-pole
- 50/60 Hz
- Enclosures not included

Feature a modular design that permits various configurations. Dual-mounting system.

Mechanical life: 10 million operations, and electrical life: 1 million operations. Finger and back-of-hand protection. UL Listed and CSA Certified.

OVERLOAD RELAYS

- Trip Class 10

Feature phase loss sensitivity, ambient temperature compensation, automatic or manual reset, trip indication, and trip test.

AUXILIARY CONTACT BLOCKS

Contacts rated 10A, A600. Max. 600V.

Miniature IEC Contactors and Overload Relays

- 3- and 4-pole configurations
- IP20 rated
- 12 to 600VAC, 12 to 220VDC

Eaton XT/DIL M Series miniature contactors are available with screw or spring-cage terminals and panel or DIN-rail mounting. Miniature overload relays mount directly to mini-contactors. Feature phase failure sensitivity, manual and automatic reset by selector switch, Test/Off button, and trip-free release. Suitable for light-duty applications like hoisting, packaging, material handling, heating, lighting, and automation systems. Quiet operation. Contact dimensions: 2.28"H x 1.77"W x 2.05"D. UL Listed, CSA, and CE Approved.

Schneider Electric

- Bimetallic thermal overload relays
- 3-pole
- Trip test
- Phase loss sensitivity protection
- 35mm DIN rail mounting
- Class 10 overload protection

Can be used alone for local, manual control of a single motor. Operating current of instantaneous magnetic trip is approx. 13 times the max. thermal trip (nonadjustable setting). 10K AIR at 480V. Mechanical and electrical life: 100,000 operations, max. 25 operations per hr. UL Listed and CSA Certified.

Definite Purpose Contactors

Square D 8910DP Series—Quick-connect terminals and binder head screws enable easy straight-through wiring. Double-break contacts. Mechanical life: 500,000 operations. Compact design. Box lugs are standard on 40A and higher models. Auxiliary contact modules snap onto either side of standard models. Suitable for air compressors, agricultural equipment, pumps, food service equipment, and HVACR equipment. 277VAC and 480VAC coil voltages available on Grainger.com®. UL Recognized and CSA Certified.

- 600VAC max.
- Industry-standard mounting

Dayton®—Captive screw and quick-connect terminals for easy wiring. Double-break contacts. Suitable for HVACR equipment. UL Recognized.

- 3-year warranty
- 60/50 Hz
- Nonreversing

Eaton C25 Series—Feature a compact, efficient design with a low VA coil and straight-through wiring. Housing design limits dust and other contaminants from magnet structure and reduces noise. 3- and 4-pole contactors are dual-rated for inductive and resistive ratings. Quick connect terminals and box lugs come standard on all contactors. UL Recognized.

- Direct replacement to most HVAC contactors
- Mounting holes align to 60 amps
- 600VAC max.

SQUARE D by Schneider Electric SIEMENS

Heavy-Duty Safety Switches

Higher amp ratings and NEMA 4X and 12 enclosures are available on Grainger.com®.

NOTE: 600V 30 to 200A switches are field adjustable for Class J fuses.

SIEMENS

Designed with quick-make, quick-break switching action for severe applications. Feature highly visible self-aligning blades to ensure positive contact and highly visible On/Off handle indication. Padlockable cover latch and handle.

SQUARE D

Designed to withstand short circuits up to 200kA rating when used with, or protected by, Class R fuses with Class R kits installed (this page). See Class RK5 fuses on page 178. Switches meet NEMA Standards KS1-1990, Enclosed Switches, and UL 98. UL Listed.

HUBBELL® Wiring Device-Kellems

Switched Enclosures

TWIST-LOCK® ENCLOSURE

Nonmetallic enclosure has large, replaceable, gasketless door and hinge assembly for easy access and weatherproofing. Receptacle not included; order separately. Use with any NEMA rated 2-pole, 3-wire to 4-pole, 5-wire Twist-Lock® receptacle.

CIRCUIT-LOCK® DISCONNECT SWITCH ENCLOSURES

Nonmetallic enclosures have strong, galvanized steel internal frame that bonds grounds and a watertight conduit fitting. They enclose disconnect switches that provide On/Off switched control of direct-wired motor loads.

General-Duty Safety Switches

Fast and reliable switches are primarily intended for use with circuits where the available current is less than 100,000A when used with Class R or T fuses or 10,000A max. used with Class H fuses. Feature quick–make, quick-break, and visible blade switching action. Padlockable in OFF position and door in closed position. Suitable for use as service entrance equipment. Require equipment grounding kit; see page 175. Switches meet UL 98. UL Listed.

Double-Throw Safety Switches

Each switch is continuous-duty rated for its nameplate ampere value. Equipment grounding kits are available for service equipment and included in 30 to 100A DTU devices. NEMA Type 3R switches use bolt-on hubs; see page 175. All switches meet UL 98 Standard for Safety, Enclosed, and Dead Front Switches, and meet or exceed NEMA Standard KS1-1990.

Class RK1

These fuses are more current-limiting than RK5 fuses to react more quickly to overcurrent. They have a rejection feature that prevents an accidental downgrade from a current-limiting system.

1DG46

Class RK5 Fuses

These fuses provide moderate current limitation for general use applications where more current-limiting RK1 fuses aren't needed. They have an interrupting rating (IR) of 200kA and have a rejection feature that prevents an accidental downgrade from a current-limiting system.

Midget Fuses

EATON BUSSMANN SERIES · FERRAZ SHAWMUT IS NOW MERSEN · MERSEN

- Fuse Size 1 1/2"L x 13/32" dia.
- These fuses supplement the primary branch-circuit fuse or breaker to provide backup overcurrent protection for lighting, solenoid, motor, and transformer circuits. They are noncurrent-limiting, so they won't limit exposure to the full magnitude and duration of an overcurrent.

1CR95

EATON BUSSMANN SERIES

Class T Fuses

These are very small fuses that protect electrical feeders and branch circuits from overcurrent. They have an interrupting rating (IR) of 200kA and are not interchangeable with any other UL fuse class.

4ZAU3

FERRAZ SHAWMUT IS NOW MERSEN

UL Class CC Fuses

- Fuse Size 1½"L x13/32" dia.

These fuses provide a high interrupting rating and current limitation for overcurrent protection. Their rejection feature ensures a match with Class CC rejection fuse blocks and holders. These 600VAC fuses have an interrupting rating (IR) of 200kA.

Safe-Touch (Plug-In Cube) Time-Delay UL Class J Fuses

- AC Voltage Rating 600VAC
- Plug In Body Style
- These are finger-safe time-delay fuses that tolerate temporary inrush currents without opening, which prevents nuisance-blowing. They have a square shape that provides a small footprint for limited-space applications and makes them compatible with finger-safe Class J fuse blocks and holders. They have a visual indicator to make it easier to identify blown fuses.

Class J Fuses

- AC Voltage Rating 600VAC
- These fuses have a high interrupting rating for protecting against short circuits and are ideal for IEC motor starter applications. These fuses are not interchangeable with any other UL fuse class.

EATON
BUSSMANN SERIES

Semiconductor Fuses

These fuses provide overcurrent protection for solid-state components in power electronics applications. Also known as rectifier fuses, they are extremely current-limiting to prevent electrical damage by disconnecting circuits before they're exposed to the full magnitude and duration of an overcurrent.

Class L Fuses

- AC Voltage Rating 600VAC
- Bolt-On Body Style

These fuses protect electrical feeders and service equipment from overcurrent. These fuses are not interchangeable with any other UL fuse class. Class L fuses bolt onto their mountings for a secure hold.

BUSSMANN SERIES

Class G Fuses

- Cylindrical Body Style

These fuses protect against overcurrent in nondemanding applications. Each Class G fuse size will only fit its matching Class G fuse block or holder to prevent the wrong size fuse from being installed. They are not interchangeable with any other UL fuse class. These fuses have an interrupting rating (IR) of 100kA.

BUSSMANN SERIES

Class K5 and H Fuses

These fuses are for general purpose use. They're highly sensitive to changes in current flow and open within seconds of being exposed to overloads and short circuits. They have no indicator for identifying a blown fuse. Class H fuses have an interrupting rating (IR) of 10kA. Class K5 fuses have an IR of 50kA and are current-limiting to prevent electrical damage.

Forklift Limiter Fuses

These fuses provide overcurrent protection for heavy-duty loads in lift trucks, scissor lifts, pallet movers, and other DC battery-powered equipment. They bolt onto their mountings for a secure hold. **ACK, ACL, and ALS Series fuses** have no indicator for identifying a blown fuse, so they're sometimes used with an indicating fuse block or cover. **ANL Series fuses** are time-delay and have a see-through window that reveals whether the fuse wire is intact or has melted. **ANN series fuses** are fast-acting and have a see-through window. The **fuse block** holds flat-body series ANL and ANN fuses.

Medium Voltage Fuses

These fuses provide overcurrent protection at voltages greater than 600VAC for use in medium-voltage transformers, feeder circuits, motor circuits, and fused switches. They meet American National Standards Institute (ANSI) design standards. **E-rated fuses** are for general purpose use. **R-rated fuses** are for backup applications. **PT-rated fuses** are for protecting potential transformers.

Glass Fuses

EATON BUSSMANN SERIES | FERRAZ SHAWMUT IS NOW MERSEN MERSEN

These fuses provide overcurrent protection for low-current circuits. They're used for applications where they won't be exposed to high heat that could shatter the glass. Their small, cylindrical body is see-through for checking whether the fuse wire is intact or has melted.

Ceramic Fuses

- AC Voltage Rating 250VAC

These fuses protect against overcurrent in high-current circuits found in AC or DC electronics, appliances, and electrical equipment. They have higher interrupting ratings and withstand higher temperatures than glass fuses. Ceramic fuses shows no outward signs when the fuse has blown, so they're typically tested with a multimeter or ohmmeter to check their function. **Fast-acting fuses** open within seconds of being exposed to overloads and short circuits. They are sensitive to changes in current flow and power surges. **Time-delay fuses** tolerate temporary inrush currents without opening to prevent nuisance-blowing, but they open when exposed to sustained loads and short circuits.

Telecom Protection Fuses

These fuses open within seconds of being exposed to overloads and short circuits. They are highly sensitive to changes in current flow and don't tolerate temporary overload currents or power surges. Sometimes called alarm fuses, they trigger an LED or audio alarm when they've blown to aid fuse replacement.

Plug Fuse Holders

These carry screw-in plug fuses for overcurrent protection of motor circuits and supplemental protection of residential and industrial branch circuits. They have a threaded receptacle for the fuse and a lid that covers the fuse to protect against accidental contact with live clips. They're commonly used in equipment such as pumps, power tools, and HVAC blowers.

EATON
BUSSMANN SERIES

Fuse Blocks

Provide a single unit for holding one or more fuses. They have an open top for access to fuses, clips or studs for securing fuses within the block, and terminals for connecting to the circuit.

Glass & Ceramic Fuse Blocks						
Compatible Fuse Series 311, 312, 313, 314, 315, 322, 326, 3AG, ABC, ACG, GAB, GBB, GDL, GDV, GGC, GSA, MDA, MDL, MDQ, MDV, MDX, MMB						
0 to 30 A	300V AC/DC	Screw	Bolt-Down	**1CZ43**	**1DK46**	**1DL55**
0 to 30 A	300V AC/DC	Quick Connect	Bolt-Down	**1CZ42**	—	—

EATON BUSSMANN SERIES

1CV50

In-Line Fuse Holders

These are wire-mounted holders that connect anywhere along a circuit to protect specific lines. They allow these lines to be isolated in the event of a fault so that the rest of the wiring system won't be affected.

No. of Poles	Amp Range	Voltage Rating	Connector Type	Fuse Block Design	Item No.
In-Line Fuse Holders for Class CC & Midget Fuses					
Compatible Fuse Series AGU, ATM, ATQ, BAF, BLF, BLN, FLM, FLQ, FNM, FNQ, GGU, HC10S, KLK, KLKD, KLM, KTK, OTM, TRM					
1	0 to 30 A	600V AC/DC	Crimp	Non-Breakaway	**1BW56**
1	0 to 30 A	600V AC/DC	Crimp/Setscrew	Breakaway with Boots	**1CV50**
1	0 to 30 A	600V AC/DC	Crimp	Breakaway with Boots	**6F453**
1	0 to 30 A	600V AC/DC	Crimp/Setscrew	Non-Breakaway	**49ZU52**
2	0 to 30 A	600V AC/DC	Crimp	Non-Breakaway	**49ZU55**
2	0 to 30 A	600V AC/DC	Crimp	Breakaway with Boots	**49ZU56**
In-Line Fuse Holders for Glass & Ceramic Fuses					
Compatible Fuse Series 311, 312, 313, 314, 315, 322, 326, 3AG, ABC, ACG, GAB, GBB, GDL, GDV, GGC, GSA, MDA, MDL, MDQ, MDV, MDX, MMB

0 to 30 A	250V AC/125V DC	Solder	Bayonet Knob	½ in x 15⁄32 in dia	**6F457**
Panel-Mount Holders for Glass & Ceramic Fuses with Knob					
Compatible Fuse Series GLQ, GMQ					
0 to 1 6/10 A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW02**
0 to 3 ½ A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW05**
0 to 5 A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW06**
0 to 6 ¼ A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW07**
0 to 10 A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW04**
0 to ½ A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW03**
Compatible Fuse Series GLR, GMF, GRF, LGR, LMF, SLR, SMF					
0 to 12 A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**1CW08**
0 to 15 A	300V AC	Wire Leads	—	⅞ in x 47⁄64 in dia	**49ZU57**

Fuse Reducers

EATON BUSSMANN SERIES

6F448

Adapt lower-rated fuses to fit higher-rated fuse blocks, fuse holders, and fused disconnect switches. They're used on fuses of the same class and voltage when switching from higher amperage to lower amperage ratings. These reducers maintain a strong electrical contact to help ensure proper fuse operation. UL Listed and CSA Certified.

Amp Range	Max. Amps	Max. Voltage	Fits Fuse Block Style	Item No.
Fuse Reducers				
For Fuse Class H, K				
0 to 30 A	60 A	250V AC	Nonrejection	**6F448**

EATON BUSSMANN SERIES — IDEAL®

Fuse Pullers

Safely remove fuses from blocks and holders without breaking them.

Overall Length	Color	For Use With	Material	Brand	Item No.
Small Fuse Pullers					
2 in	Yellow	Glass Tube and ATC Fuses	Nylon	Bussmann	**5KK54**
5 in	Blue	Fuse Types 0-30, 600V or 0-60, 250V, 13⁄32 in to 13⁄16 in dia Fuses	Nylon	Bussmann	**6F446**
7 ¼ in	White	For 0 to 60A T-Tron Fuses	Nylon	Bussmann	**1BZ81**
5 in	Yellow	For 250V, 9⁄32 in to ½ in dia Fuses	High-Dielectric, Glass-Filled Polypropylene	IDEAL	**39N412**
5 in	Yellow	For 0 to 30A/250V, ¼ in to ½ in dia Fuses	Nylon	IDEAL	**39N415**
Medium Fuse Pullers					
7 ¼ in	Gray	1 in to 1¾ in dia 0 to 100/0 to 60 Amperes Fuses	Nylon	Bussmann	**6F447**
7 ½ in	Yellow	½ in to 1 in dia Fuses	High-Dielectric, Glass-Filled Polypropylene	IDEAL	**3KUU6**
Medium Fuse Pullers w/Test Lights					
7 ¼ in	Yellow	Pulls 9⁄16 in to 1 in dia Fuses , 100A/250V and 60A/600V Fuses	Nylon	IDEAL	**39N414**
Large Fuse Pullers					
7 ¼ in	Gray	1¾ in to 2½ in dia Fuses	Nylon	Bussmann	**1BZ80**
11 ¾ in	Yellow	¾ in to 2½ in dia Fuses	High-Dielectric, Glass-Filled Polypropylene	IDEAL	**1HCH1**
7 ¼ in	Yellow	9⁄16 in to 1 in dia Fuses	Nylon	IDEAL	**3KUU8**

SIEMENS · EATON BUSSMANN SERIES · Schneider Electric

UL 489 Circuit Protectors

- B curve = magnetic trip between 3.2 and 4.8 times rated current (computer, electronic, and generator applications)
- C curve = magnetic trip between 7 and 10 times rated current (general purpose applications)
- D curve = magnetic trip between 10 and 14 times rated current (motors, transformers, and similar applications)

These miniature circuit breakers are UL489 listed for use as branch circuit protection or as supplementary electrical protection. Also known as branch circuit overcurrent devices, they open the circuit upon overload or in the event of a short circuit to protect equipment from damage. Mount these circuit breakers on standard 35mm DIN rail in control panels, motor control centers, panelboards, and other low-voltage electrical applications.

SIEMENS · EATON BUSSMANN SERIES · Schneider Electric

UL 1077 Circuit Protectors

- B curve = magnetic trip between 3.2 and 4.8 times rated current (computer, electronic, and generator applications)
- C curve = magnetic trip between 7 and 10 times rated current (general purpose applications)
- D curve = magnetic trip between 10 and 14 times rated current (motors, transformers, and similar applications)

UL1077 listed supplementary protectors are used as extra protection for devices with branch circuit protection that is not sensitive enough for downstream components or where branch protection isn't required. They open the circuit upon overload or in the event of a short circuit to protect equipment from damage. They mount on standard 35mm DIN rail to protect sensitive equipment, like luminaires, appliances, control circuits, control power transformers, and other electrical equipment.

Eaton Circuit Breakers and Load Centers

These miniature circuit breakers are compatible with Eaton Cutler-Hammer panelboards and load centers in low-voltage lighting applications and interrupt the flow of current when faults are detected. They prevent damage caused by overcurrents and short circuits.

GHB Series Bolt-On Circuit Breakers

Breakers are suitable for low-voltage fluorescent lighting applications and interrupt currents when faults are detected in the circuit. They have a lug orientation to allow for straight-in wiring through bus bars, which eliminates the need to pigtail wires and helps organize the load center. UL Listed and CSA Certified.

Front Panel-Mount Miniature Circuit Breakers

Carling Technologies®

Miniature circuit breakers interrupt current overloads and mount on the front panel of equipment. They're typically used with simple systems that don't have separate electrical panels or enclosures, like power supplies, medical equipment, control panels, and telecommunications equipment.

Obsolete Miniature Circuit Breakers for Panelboards & Load Centers

- 1-phase
- 10kA IR

Miniature circuit breakers are used with panelboards and load centers that are no longer in production. They interrupt the flow of current when low-level faults are detected. They prevent damage caused by overcurrents and short circuits in residential, light commercial, and industrial applications.

1-Pole QO® Plug-In

1-Pole QOB Bolt-On

1-Pole Tandem

2-Pole QO Plug-In

2-Pole GFCI

3-Pole QO® Plug-In

SQUARE D by Schneider Electric

QO® (Plug-In) and QOB (Bolt-On) Circuit Breakers

- 120/240VAC
- Visi-Trip® indicator
- Standard and VH breakers are UL Listed as HACR type

Qwik-Open® (QO) breakers are for use only with QO load centers and NQ/NQOD panelboards. QOB breakers are for use only with NQ/NQOD panelboards. Rated for aluminum and copper conductors.

** UL Listed as SWD (switching duty) rated. † Combination arc fault interrupter senses both parallel and series arcing. ‡ Plug-on neutral.*

Square D Load Center Selection

To choose the proper Load Center for your needs, start by asking yourself the following:

- Do you need a Load Center (14½"W residential enclosure) or a panelboard (20"W commercial enclosure)?
- What type of service do you need: single-phase or 3-phase?
- Do you need an indoor or outdoor Load Center?
- What type of Load Center is required, Main Breaker or Main Lug? (Main Lug has no main disconnect in the load center.)
- What is the max. amperage size of the service?
- How many total spaces does the Load Center require?
- If QO is selected, will you require a Plug-On Neutral arc fault breaker Load Center?
- Verify the Short Circuit Current Rating (SCCR) of the voltage system to ensure correct Load Center for the application

60UM09

QO® Load Centers

SQUARE D by Schneider Electric

- Use only QO circuit breakers (see page 193)

Main Lug Load Centers are used when all the circuit slots in the main breaker load center are full or when a remote panel is desired. **Main Lug, Convertible, Plug-On Neutral Load Centers** can be converted to a main breaker load center, so they can be used to distribute the main supply of power if needed. With a neutral bar on either side of the bus bars, so compatible AFCI (arc fault circuit interrupter) or GFCI (ground fault circuit interrupter) breakers can plug directly onto the bus and neutral bars without requiring a pigtail connection. **Main Breaker Load Centers** can be converted to a main lug load center with a required lug kit, so they can be used when a remote panel is desired. **Main Breaker, Convertible, Plug-On Neutral Load Center** can be converted to a main lug load center with a required lug kit, so they can be used when a remote panel is desired. These load centers have a neutral bar on either side of the bus bars, so compatible AFCI (arc fault circuit interrupter) or GFCI (ground fault circuit interrupter) breakers can plug directly onto the bus and neutral bars without requiring a pigtail connection.

NQ/NF Panelboards

- Complete panelboard requires interior, enclosure, and flush or surface cover
- NQ panelboards are for use with QO (plug-in) or QOB (bolt-on) breakers; see page 197
- NF panelboards are for use with EDB (bolt-on) breakers; see page 197
- Tin-plated aluminum or silver-plated copper construction
- Use with ground bar kit 5B716 (not included)
- Use NQ adapter kits with Q and L frame breakers, available on Grainger.com®
- Use NF adapter kits with H and J frame breakers; see page 197

Preassembled main lugs save installation time. Convertible to main breaker. End-mounted split neutrals put neutral connections on the mains end of the panelboard, away from the high-density wiring area of the panel-side gutters. UL Listed.

Adjustable Molded Case Circuit Breakers

SQUARE D by Schneider Electric

Adjustment is set at the front of the breaker.

MOTOR CIRCUIT PROTECTORS (MAG-GARD®)

- Magnetic trip only—provides no overload protection
- For supplementary protection within equipment
- Trip setting tolerances are ±20% of nominal values

Provide adjustable instantaneous trip when used in combination with motor starters with overload relays.

1-Pole Standard

SQUARE D by Schneider Electric

EDB (Bolt-On) Circuit Breakers

- UL Listed as HACR type
- 480/277VAC

Used with NF panelboards.

THQL (Plug-In) and THQB (Bolt-On) Circuit Breakers

Standard Plug-In 1-Pole

Standard Bolt-On 2-Pole

Standard Bolt-On 3-Pole

Switching Neutral Plug-In 2-Pole

- 1-pole 120VAC; 2-pole 120/240VAC; 3-pole 240VAC
- Screw clamp connection up to 30A; box lug connection 35A and higher

Bolt-on breakers are for use in 120/240V AQ lighting panels. Plug-in breakers are for use in AQL lighting panels and Power Mark Gold load centers.

THQL Load Centers

32WR97

Designed with sturdy copper bus and galvanized box to increase durability and reliability. Reduce total cost through faster, easier installation. Enhanced application flexibility and reduced inventory requirements. Side mounted main breaker allows top or bottom feed. Maintain optimum wire-bending space. Load center accessories available, see Grainger.com®.

SIEMENS

QP (Plug-In) and BL (Bolt-On) Circuit Breakers for Siemens Load Centers

- Fixed lug
- UL Listed and CSA Certified

These miniature circuit breakers are compatible with Siemens panelboards and load centers and interrupt the flow of current when low-level faults are detected. They prevent damage caused by overcurrents and short circuits in residential, light commercial, and industrial applications where sensitive circuit protection is needed.

- NOTE: QP and BL breakers are UL Approved replacements for ITE breakers.

BQ (Bolt-On) Circuit Breakers

SIEMENS

These BQ and BQH series miniature circuit breakers are bolted into place in panelboards, so they're more stable than plug-in breakers. They interrupt currents when low-level faults are detected in the circuit. They have a lug orientation to allow for straight-in wiring through bus bars, which eliminates the need to pigtail wires and helps organize the panelboard.

Surge Protection Devices (SPDs)

SolaHD

- Compact and narrow design
- Low clamping levels

Provide point-of-use, all-mode protection against damaging transients at the dedicated equipment level. Install in electronic control cabinets on the factory floor or at remote locations. Provide sine wave tracking, LED status indication, form C dry contacts.

EATON

Surge Protection Devices (SPDs)

Service entrance surge protection provides AC power protection, and LED status indication for indoor/outdoor applications. Connect to the outside of any UL-approved loadcenter. Base Mount feature thermally-protected metal oxide varistors for high energy capacity. Small size allows device to be installed close to the equipment being protected.

ERICO SIEMENS

Surge Protection Devices (SPDs)

SIEMENS, UL 3RD EDITION

Siemens Transient Protection System (TPS3) is a complete line of hard wired surge protection solutions designed to provide robust surge protection for your electrical and electronic equipment. Most SPDs carry UL's highest I-n rating of 20kA with surge current capacities ranging from 50 to 300kA. Suitable for commercial, industrial, and residential SPDs. See the table below for surge current ranges based upon the average ratings specified by US consulting engineers.

ERICO

Compact models can be directly mounted to panel and installed in small spaces. LED status monitoring. Modular models allow individual modules and fuses to be field-replaceable. Built-in disconnect and fusing eliminates the need for external fusing.

Class 2 Transformers

JOHNSON CONTROLS

Designed for use on digital controllers, gas controls, ignition systems, motor actuators, staging controls, and most other 24VAC HVACR control systems. UL 1585, UL 506, and CSA C22.2 No. 66.

DAYTON

- 1-phase, 60/50 Hz

100VA models and 4TGX7 and 4VZF1 are UL and C-UL Listed. Most others are UL and C-UL Recognized, except 50VA models are UL Recognized and CSA Certified.

WHITE RODGERS

Energy limiting to power 24VAC control systems, and step down available line voltage.

RIB® 20 TO 100VA

- Class 2 rated, except where footnoted
- 1-phase, 60/50 Hz

Designed with split-bobbin construction and pigtail wires. UL and C-UL Listed, CE Certified.

23NT12

Prepackaged Control Transformers

- 24VAC Output
- 1-Phase, 60/50 Hz
- Includes circuit breaker
- 40VA to 500VA

Feature On/Off control, overcurrent protection, LED power indicator, high/low separation, 120VAC convenience outlets, and fully-enclosed finger-safe terminals.

SolaHD

Power Conditioners

- 1-phase, 60 Hz
- Hardwired, panel-mount
- 25-yr. typical mean time before failure (MTBF)

Constant-voltage transformers regulate voltage, filter noise, and suppress surges to protect connected equipment. They utilize patented ferroresonant transformer technology to function as both step-up and step-down transformers. For use where a constant voltage level is required to help reduce unscheduled downtime, incorrect data, or scrapped production. UL Listed.

Control Transformers

Square D Nonfused

Additional transformers are available, see Grainger.com®. 60/50 Hz.

Dayton® Encapsulated—Fully-encapsulated coil eases wire routing around transformer, and provides durable construction. 55°C temp. rise. Panel mounting. Include secondary fuse clips. 3-yr. warranty.

Dayton® Finger Safe—Open 1-phase isolating/control transformers feature separate insulated windings with heat-tempered varnish that protects against dust, humidity, and corrosion. For fixed installation in cabinets or switchboards. Require separate overload and short-circuit protection. Handle high inrush currents associated with contactors and relays. 50°C temp. rise, 45°C ambient.

Square D—Copper wound, vacuum impregnated. 50 to 150VA models: 55°C temp. rise; 200 to 350VA models: 80°C temp. rise; 500 to 2000VA models: 115°C temp. rise, meet NOM requirements. Fused models include 2 primary fuse clips to accommodate Class CC time delay, rejection type fuses; see page 180. 1 secondary fuse clip uses a 1½" x 13⁄32" midget fuse; see page 179. 10-year warranty.

Acme Electric—Constructed of silicon steel lamination to minimize core losses and increase efficiency. Feature precision wound coils, copper windings, and series-parallel connecting links. 80°C temp. rise.

Harmonic Mitigating Transformers

Acme Electric®

49NR92

- 3Ø 480VAC input, 208Y/120VAC output
- Floor mount
- NEMA 3R enclosure
- 150°C temp. rise

Eliminates harmonics to improve power and energy efficiency. Reduce supply voltage flat-topping, transformer heat, and voltage distortion. For use where nonlinear loads generate high levels of harmonic currents that feed back into the distribution system.

Buck-Boost Transformers

- 120/240VAC Input
- 1-phase, 60 Hz
- Wall mount
- Enclosure type: indoor/outdoor

Protect connected equipment from damage by reducing (bucking) or raising (boosting) line voltage 5% to 20%. Primary and secondary lead wires can be interconnected for use as an autotransformer. For use in induction motors and air conditioning, lighting, and heating systems. 24/48VAC output models are available on Grainger.com®. UL Listed and CSA Certified.

Dayton Wall Mount 44YU98

3-Phase Transformers

The Department of Energy (DOE) has mandated new, more stringent efficiency standards for 15 to 1000kVA transformers. Transformers 15kVA and higher in these tables meet this new legislation, DOE 2016, and will help lower operating costs, lower cost of ownership, increase profitability, and reduce overall greenhouse gas emissions. Addtional transformers are available, call 1-800-GRAINGER (472-4643) or see Grainger.com®.

DAYTON

These transformers are designed for indoor locations and feature a 220°C insulation system (150°C rise) that is self-extinguishing.

ACME ELECTRIC

Acme's low voltage distribution transformers are designed for industrial and commercial applications. All of Acme's general purpose transformers are rated for 600V and below. Encapsulated units are offered in ratings up to 15kVA. Ventilated units are available in ratings from 30kVA to 300kVA.

SQUARE D

Transformers NEC minimum clearance side and rear is ½". All units designed to operate at least 3dB below ST-20 sound level. The terminals are sized to handle lug kits, increasing ease of installation. Designed with increased wiring compartments that provide a bending radius for 250% primary cables and multiple feeds on the secondary. Feature 200% neutral to allow customers to feed standard and nonlinear panels.

5JK11

Line Conditioners

- Complete surge and line noise protection

By automatically regulating incoming voltage from 89 to 140VAC to provide nominal 120VAC power, conditioners keep equipment working through low-voltage (i.e., brownout) and high-voltage conditions.

1—Has 3 LEDs (High Voltage, Normal Voltage, Low Voltage). 2—Has 5 LEDs (Very High Voltage, High Voltage, Normal Voltage, Low Voltage, Very Low Voltage). 3—Has 7 LEDs (Very High Voltage, High Voltage, Normal Voltage, Low Voltage, Very Low Voltage, Line Fault, Line OK). 5—Rack mount model. 6—Has 4 NEMA 5-15R; 2 NEMA 5-20R.

PHASE-A-MATIC

Static Phase Converters

2MV45

- No moving parts to wear out
- For light to moderate loads only
- Knockout size: ½"

Quiet, easy-to-install units run 220V, 3-phase AC motors from a 220V, 1-phase power source at ⅔ of the rated horsepower. When used with a belt-driven air compressor, the motor pulley dia. must be reduced by ⅓. For full- or near-full-horsepower applications, the converter can be used to start an additional idler motor, producing even greater horsepower. Can be used for lathes, mills, grinders, drills, saws, metalworking and woodworking equipment, printing equipment, sewing machines, food blenders, mixers, processors, meat grinders, etc.

Note: Not recommended for use in damp or wet locations. The largest motor on your machine must fall within the minimum and maximum ranges of the converter. Please call 1-800-GRAINGER (472-4643) before ordering.

HP Range	Output Amps	W (in.)	H (in.)	D (in.)	Mfr. Model	Item No.

PHASE-A-MATIC

Rotary Phase Converters

Rotary Phase Converter 3EDX1

- For heavy-load applications
- Knockout size: 1"

Provide full running 3-phase power to 220V 3-phase motors, normally with full running torque, in multiple-motor, multiple-speed, and resistive applications. Quiet operation. Easy to install. For use in metalworking, woodworking, farm, food processing, and printing equipment; pumps; air conditioners; compressors; elevators; transmitters; lasers; mills; sewing machines; etc. For multiple-motor applications, contact Grainger technical support.

Note: 460V phase converters and voltage stabilizers are available on Grainger.com®.

TRIPP·LITE

Inverters and Inverter/Chargers

Hardwired units provide consistent, computer-grade AC power output from a DC source. Instantaneous peak output provides up to 200% of continuous output for short durations to start motors.

Pure Sine Wave Inverter/Chargers—Provide stable, microprocessor-controlled output and the pure sine wave power required by equipment such as variable-speed power tools and devices with PFC power supplies. Help your equipment run cooler and last longer, and help prevent the malfunctions and reduced performance that can be caused by substandard power.

Inverter/Chargers—Pass 120VAC power to equipment, keep user-supplied batteries charged, and function as automatic UPS systems when utility power is not available. Frequency control helps equipment perform at its peak. Battery charger is 3-stage selectable. Feature electronic overload shutdown and input polarity protection. Backup time is based on size of user-supplied batteries.

Utility Work Truck Inverters—Ideal for powering lights, tools, and electronic devices from your vehicle battery system. GFCI outlets. 4HHH7 is remote controllable (remote included).

Utility Work Truck Inverters/Chargers—Provide quiet mobile power directly from work truck batteries. Can be used as an alternative to portable generators as a backup power source for sump pumps and in other emergency applications. GFCI outlets. Have a built-in charger to maintain supplied batteries. Remote control included. UL Listed.

SL Silver Line Series Power Supplies

SOLAHD

- Adjustable input voltages from 100, 120, 200, 230, or 240VAC
- 60/50 Hz
- Operating temp. range: 0° to 50°C
- Short-circuit and overvoltage protection on 5V outputs
- Low output noise: 3mV

Industry-standard footprint has easy screw terminal connection. Linear, low-noise technology provides quiet, smooth DC performance. Tight load and line regulation at 0.05%. Suitable for industrial control and process systems. UL and C-UL Recognized, and CE Certified.

SDN Series DC Power Supplies (DIN Mounted)

SolaHD

- Can be connected in parallel
- 24VDC output models are adjustable from 22.5 to 28VDC
- C-series: ATEX, class 2/zone 2 per NEC codes and IECEx

Feature narrow width on DIN rail for space-critical applications, rugged metal case, and DIN connector. Large, sturdy, multiple-point screw terminations for quick connection. High-efficiency >88%, switching power supply. Extra boost capacity for high inrush loads without foldback or shutdown. Auto-select voltage input. For industrial control and process control applications including DC input solenoids, valves, switches (prox switches), relays, PLCs, and sensors. UL and C-UL Listed, and CE Certified. Meet SEMI F47 SAG Immunity.

1GYK4

SDP Series DC Power Supplies (DIN Mounted)

SolaHD

- Class 2 limited power source
- Adjustable output voltage
- Operating temp. range: -10° to 60°C, full power
- Short-circuit protection
- Low output noise: <50mV p/p
- DC OK signal

Easy-to-install units provide clean, stable DC power with a special industrial overload design that can start high inrush loads without oversizing. Compact and lightweight, with no derating necessary until above 60°C. DIN rail mount. cULus Recognized Component. Meet UL, C-UL, CE, and Class 2 NFPA 70, except 1GYK4 meets UL, C-UL, and CE standards.

Switching Power Supplies

C-SERIES

These power supplies are highly reliable in a compact metal housing with a power range from 80 to 480W. Additional features include high efficiency, long life, 20% current reserves, extremely low AC inrush, screw terminals, Class I, Div. 2 approval and a temperature range of -25° to 70°C. Units are available in single or 3-phase with output voltages from 12 to 56VDC.

MINILINE

These compact, lightweight power supplies in a robust plastic housing cover low-power requirements from 15 to 100W. Additional features include a wide temperature range with select models rated down to -40°C, spring clamp terminals on standard models, and screw terminals on the compact models. These units are available with output voltages from 5 to 56VDC with a single-phase input or select models with 380-480VAC.

Q-SERIES

With state-of-the-art technology and flexibility for demanding tasks, these power supplies are highly reliable in a compact metal housing with a power range from 80 to 960W. Additional features include outstanding efficiency, long life, 50% current reserves, extremely low AC inrush, DC OK contact and a temperature range of -25° to 70°C. Units are available in single or 3-phase input with output voltages from 12 to 55VDC and an extensive agency approval package.

SILVERLINE

Designed for general applications with a proven track record for over 20 years, the SilverLine model offers reliability in a metal housing. Additional features include high efficiency, long life, 20% current reserves, screw terminals and a temperature range of -10° to 70°C. Units are available in single or 3-phase input with output voltages from 12 to 56VDC.

OMRON
INDUSTRIAL AUTOMATION

Switching Power Supplies

- 100-240VAC, 60 Hz
- DIN rail mount
- Temp. range: -13° to 149°F

Versatile units provide a wide range of power ratings, output voltages, and styles, matching most design and performance requirements. UL Listed (508), and CE Certified. S8VS and S8VM models are also C-UL Listed. S8JX models are also CSA and EN/VDE Approved.

S8VK SERIES

- Class 2 output on 15, 30, and 60W models

This compact class has a robust design and construction to withstand harsh environments and provide stable operation over a wide operating temperature range: -40° to 158°F. Minimal wiring requirements and easy 1-handed mounting with enhanced DIN rail mounting clips.

COMPACT PLASTIC CASE, S8VS SERIES

- Class 2 output on 60W models
- SEMI F47

Feature LED display maintenance forecast monitor, which shows output voltage, current, peak current, and lifetime in years.

Precision-Regulated DC Power Supplies

TRIPP·LITE

Efficiently convert 120VAC to 13.8VDC while protecting against overcurrent. Crowbar protection on units larger than 15A prevents damage to connected equipment. Regulated output voltage maintains up to 95% of no-load value. A heavy-duty power transformer provides complete isolation from noise on incoming AC power. Chassis-mount fuse included. 30EF37 is programmable and includes instruction manual with warranty information.

SIEMENS

SITOP Power Supplies

Feature a slim, space-saving design with high efficiencies across the entire load range. The Compact models reduce temperature dissipation in a cabinet and save energy costs. These switched-mode power supplies have plug-in terminals for simple electrical connection and minimized connection time. Ideal for low-power applications. The Modular models feature power boost functionality that supplies up to 3 times the rated current, allowing free start-up of loads with high inrush current. They also offer a robust metal design, and a comprehensive set of certifications. Ideal for demanding and complex applications.

UPS Systems

Provide cost-effective backup power and power protection for critical equipment. Agency approved.

STANDBY

For basic battery backup to support individual computers and PLC applications. ECO high-efficiency models 4HHH4, 4HHH5, and 4HHH6 support green energy savings with select surge-only outlets that can be configured to automatically power off.

LINE INTERACTIVE

Provide nominal, conditioned 120VAC for applications in which fluctuating voltage (low/high) affects equipment operation. Units also provide backup power during power blackout conditions.

SMART TRUE-ON-LINE

For mission-critical applications. Double-conversion online operation with zero transfer time to battery isolates sensitive equipment from every power problem.

LINE INTERACTIVE

Meet strict leakage requirements for medical equipment used in nonlife-support applications (UL 60601-1). Keep computers working through routine emergency power checks, low voltage (brownout), and high voltage conditions without using battery power. Also provide portable power for computers on carts.

Standby, ECO High-Efficiency 4HHH4

UPS Systems

Provide backup power and power protection for critical electronic equipment.

Back-UPS—Provide backup power and power protection for individual computers. They allow the computers to run for a short time to help facilitate a controlled shut-down.

Online UPS Systems—High performance uninterruptible power supply (UPS) for electronic equipment. The systems offer reliable protection from power interruptions such as utility power blackouts, brownouts, sags, surges, small utility power fluctuations, and large disturbances.

Smart-UPS®—Helps to provide nominal, conditioned 120VAC for applications in which fluctuating voltage (low/high) affects equipment operation. The units can also help provide backup power and power protection for critical equipment during power blackout conditions. UL Listed and CSA Certified. FCC Part 15 Class A.

Heavy-Duty Power Relays

SQUARE D by Schneider Electric · Schneider Electric · Dayton

- Screw-head terminals
- Silver alloy, self-wiping contacts
- Molded thermoset plastic base

Use for switching motor loads in applications such as elevators, machine tools, air handling, and HVAC equipment. Minimum operating voltage for AC relays is 85% of nominal voltage. 0.75 power factor. Relays with magnetic blowout feature suppress arcing.

Schneider Electric · Dayton · OMRON®

Enclosed Power Relays

Flange-type mounting bracket.

DAYTON®

Bottom-mounted ¼" quick-connect terminals. Silver cadmium oxide contacts. Operating temp. -30° to 50°C DC; -30° to 65°C AC. Pull-in at 85% of nominal voltage for AC coils or 80% for DC coils.

OMRON

Top-mounted terminals. Dielectric strength: 4000VAC at 1 min. G7L series has push-to-test buttons.

SCHNEIDER ELECTRIC

Feature top-mounted terminals and locating slot for DIN rail mounting. Silver tin oxide contacts. 50/60 Hz. UL Listed.

Schneider Electric

TeSys IEC Control Relays

- 600V, 10A rating (A600)
- DIN rail mounting capability

UL Listed and CSA Certified.

COMPACT

Great for OEM and panel builders. A built-in cavity simplifies insertion of a transient suppressor.

CAD SERIES

Serrated contacts provide a wiping action to ensure excellent performance with low control voltage (24V). Basic 5-pole relay can be installed with a snap-on adder cartridge. Built to a design specification of 30 million mechanical operations. Standard instantaneous auxiliary contact blocks are available. See listing on page 170.

Mechanical AC Latch 4B518

SQUARE D by Schneider Electric

NEMA Control Relay

- Operating temp. range: -40° to 71°C (-40° to 160°F)
- Mechanical tie between all cartridges

Rugged, heavy-duty design ensures improved performance, reliability, and long life. Feature field convertible color-coded contact cartridges and replaceable coils. Average operating time in milliseconds: AC is 15 pickup, 16 dropout; DC is 37 pickup, 21 dropout. UL Listed and CSA Certified.

NEMA CONTROL RELAY

- 600V, 10A rating (A600)

All contact poles are usable since no overlapping contacts are needed. Relays have plug-in contact cartridges for easy contact conversion, from Normally Open to Normally Closed, and replacement; removal of terminal screws or wires is not necessary. Self-lifting pressure wire connectors. Straight-through wiring.

Note: A maximum of 8 NC contacts is allowed on 12-pole relays.

MASTER NEMA CONTROL RELAY

- 600V, 20A rating (A600)

Note: Attachments are not permitted on this relay.

Panel mount and DIN rail mount SSRs with standard LED indicator, internal snubber (AC output versions), zero-cross switching, and finger safe (IP20) terminals. DIN rail mount models come with integrated heat sinks. Ideal solutions for industrial automation, heating elements, lighting controls, packaging equipment, conveyors, plastic extrusion equipment, and commercial ovens.

Mercury Displacement Contactors

- Normally open contacts
- Matching footprint to DP contactors
- Hermetically sealed

Sealed liquid-mercury contactors have frictionless plunger that eliminates metal-to-metal wear. Ambient temp. range: -30° to 165°F under continuous load. Vertical mounting only. Suitable for heating and motor loads with frequent On/Off cycles. UL Listed and CSA Certified.

RIB Functional Devices, Inc.

RIB Relay in a Box

- NEMA 1 enclosure with ½" NPT nipple, except ¾" on 2ERZ6 and 2ERZ7
- General purpose; ready to install
- LED indicators
- 16" leads

Prewired; multivoltage coil inputs enable 1 relay to replace many different types of relays. Easy to mount. Use for controlling high-voltage appliances with low-voltage signals, such as exhaust fans, vacuums, and motors. UL and C-UL Listed.

EATON

Current Sensors

Solid-state adjustable current switch is self-powered and able to sense current and provide output above and below setpoint. Suitable for applications such as jam detection, overload protection, and critical loads.

Universal AC Current Sensors

Sensors detect locked rotor, loss of current, open heater, or lamp load. Dayton and Schneider models feature switch-selectable overcurrent or undercurrent sensing. Toroidal sensor has 0.36" through hole on Dayton models.

1-Phase Voltage Sensing Relays

- Field adjustable for pull-up and dropout
- LED status indicators
- 0.1- to 10-sec. activation delay

Solid-state sensor works as an overvoltage or undervoltage detecting relay to prevent equipment burnout and offer brownout protection.

3-Phase Line Monitors/ Phase Failure Relays

- Automatic reset
- LED indicator signals normal operation
- Wye or delta 3-wire hookup

Units protect against phase loss, phase unbalance (except 5WMJ4, 5WMJ5, and 5WMJ6), phase reversal, and undervoltage. Adjustable undervoltage setting. 12N828 and 5WMJ3 also detect overvoltage.

Alternating Relays

- Octal Base
- LED status indicators

Relays alternate the operation of 2 loads, sharing their run time. Selector switch allows alternating or individual operation of either load. Dual-stage load capacity permits simultaneous operation of 2 motors, solenoids, compressors, pumps, valves, or heaters. The relays return to load "A" after power outage. UL Recognized and CSA Certified.

6MPN9

Pump Seal Failure Relay

- 8-pin octal base
- LED status indicator

Designed to monitor shaft seals in submersible pumps, and to provide an early warning of seal leak. 5WMJ7 is a single-channel unit, and 5WMJ8 is a dual-channel unit capable of monitoring 2 pumps.

Time-Delay Relay Selection Guide

Description of Time Delay Operation	Operation	Timing Periods					Function Code
ON DELAY: When power is APPLIED to the coil, the ON DELAY timing period begins. The contacts do not transfer at this time. At the end of the ON DELAY time period the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. The contacts stay in the transferred state until power is REMOVED from the coil. They then return to their original state and the unit is ready for a new cycle.	Power	On	On	On	On	Off	1
	Load	Off	On	On	On	Off	
OFF DELAY I: Power is applied to the coil at all times. Upon CLOSURE of the start switch (a "dry" external contact), the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. When the start switch is OPENED, the OFF DELAY timing period begins. The contacts stay in the transferred position until the OFF DELAY timing period ends. They then return to their original position and the unit is ready for a new cycle.	Power	On	On	On	On	On	2
	Switch	Off	On	On	Off	Off	
	Load	Off	On	On	On	Off	
OFF DELAY II: Power is applied to the coil at all times. Upon the MAKE and RELEASE of the start switch (a "dry" external contact), the OFF DELAY timing period begins and the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. When the timing period ends, the contacts return to their original position and the unit is ready for a new cycle.	Power	On	On	On	On	On	3
	Switch	Off	On	Off	Off	Off	
	Load	Off	Off	On	On	Off	
INTERVAL DELAY: When power is APPLIED to the coil (the start switch must be jumped in multifunction timers), the INTERVAL timing period begins and the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. When the INTERVAL timing period ends, the contacts return to their original position. The unit resets when power is removed from the coil, making the unit ready for a new cycle.	Power	On	On	On	On	Off	4
	Load	On	On	Off	Off	Off	
CYCLE 1 SHOT (EQUAL TIME OFF/ON): Upon application of power to the timer, timing starts. The output relay is OFF for the set time and then ON for the set time for 1 cycle only. The timer is reset when power is removed or a reset input is applied.	Power	On	On	On	On	On	5
	Switch	Off	Off	Off	On	On	
	Load	Off	On	Off	Off	On	
REPEAT CYCLE (EQUAL ON AND OFF DELAY TIME PERIODS): When power is APPLIED to the coil, the OFF time period is initiated; the contacts do not transfer. At the end of the OFF time period the ON time period begins. The contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. At the end of the ON period, the contacts transfer and the cycle continues until power is removed from the coil.	Power	On	On	On	On	On	6
	Load	Off	On	Off	On	Off	
REPEAT CYCLE (INDEPENDENT ON AND OFF DELAY TIME PERIODS): When power is APPLIED to the coil, the ON period is initiated by contact transfer (normally open contacts close, normally closed contacts open). At the end of the OFF period, contacts release and the ON period begins. The cycle continues until power is removed from the coil.	Power	On	On	On	On	On	7
	Load	On	Off	On	Off	On	
SIGNAL INTERVAL/OFF DELAY: Power is applied to the coil at all times. Upon CLOSURE of the start switch (a "dry" external contact), the INTERVAL cycle begins; the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. At the end of the INTERVAL cycle, the OFF DELAY cycle begins and the contacts stay transferred until the OFF DELAY cycle ends. The contacts then return to their original positions and the unit is ready for a new cycle.	Power	On	On	On	On	On	8
	Switch	On	On	Off	Off	Off	
	Load	On	On	On	Off	Off	
SIGNAL ON DELAY/OFF DELAY: Power is applied to the coil at all times. Upon CLOSURE of the start switch (a "dry" external contact), the ON DELAY cycle begins; the contacts do not transfer. At the end of the ON DELAY cycle the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. Upon RELEASE of the start switch, the OFF DELAY cycle begins; the contacts remain transferred. At the end of the OFF DELAY cycle, the contacts return to their original positions and the unit is ready for a new cycle.	Power	On	On	On	On	On	9
	Switch	On	On	Off	Off	Off	
	Load	Off	On	On	Off	Off	
POWER OFF DELAY: When power is APPLIED to the coil, the contacts transfer, either connecting (normally open contacts) or disconnecting (normally closed contacts) the load. When power is removed from the coil, the OFF DELAY timing period begins; contacts remain transferred. At the end of the OFF DELAY cycle, the contacts return to their original positions and the unit is ready for a new cycle.	Power	On	On	On	Off	Off	10
	Load	On	On	On	On	Off	
WATCHDOG (RETRIGGERABLE SINGLE SHOT): Upon application of input voltage, the time delay relay is ready to accept trigger signals. Upon application of the trigger signal, the relay is energized and the preset time begins. At the end of the preset time, the relay is de-energized unless the trigger signal is closed and opened prior to time out (before preset time elapses). Continuous cycling of the trigger signal at a rate faster than the preset time will cause the relay to remain energized.	Power	On	On	On	On	On	11
	Switch	Off	On	Off	Off	On	
	Load	Off	On	On	Off	On

Logic Relays and Extension Modules

Schneider Electric

- 16 counters and timers
- Integral display

Expandable design allows users to manage a simple automation system with multiple inputs and outputs, without the need for a complex programmable controller. 6-button navigation allows direct programming in any of several computer languages. Compact, space-saving design. Extension modules add inputs and outputs to customize systems for specific needs. Programming software 1CNL6 and PC connection cable 1CNL7 permit uploading programs from a PC, directly to multiple relays. Use for small machinery and supplemental large machinery automation systems, lighting management, security systems management, and HVAC management.

Programmable Relays

EATON

Easy to use Programmable Relays feature expandable design that allows you to manage a simple automation system with multiple inputs and outputs, without the need for a complex programmable controller. Compact, space-saving design with extension modules that add inputs and outputs to customize systems for specific needs. They are also easy to connect via Ethernet or Profibus to other PLC's or automation systems. Use for small machinery and supplemental large machinery automation systems, lighting management, security systems management, and HVAC systems.

OMRON INDUSTRIAL AUTOMATION

Programmable Relays

- 56 timers and 17 counters
- LCD with calendar and clock

Provide relay, timer, counter, and time switch functions; easily programmable in ladder-view format. With weekly and calendar timers, flexible mounting expansion via 8-point I/O units, twin-timer operation, and multilanguage display. DC models have analog inputs. For use in time-controlled and small-scale applications such as lighting and air conditioning.

CUB Series Miniature Panel Meters

- NEMA 4X/IP65 sealed front bezel

Backlight units require external power, typically 12/24VDC.

CUB4 Series have 0.46"H (12mm) digits, a large display, and a NEMA 4X front panel with a faster count rate and push buttons that can be displayed.

CUB7 Series have 0.35"H (9mm) digits with a NEMA 4X front panel, and faster count rate and push buttons that can be displayed.

CUB5 Series have 0.46"H (12mm) digits, and are designed to include option cards for setpoints and communications.

EATON

Electronic Totalizers and Count Controls

Panel mounted. CE Certified. AC-supplied units are UL and C-UL Recognized.

E5 Series—IP65 front panel for use in moist environments. NPN or PNP inputs accept almost any 3-wire DC sensor. Totalizers have rear screw terminal connections. 2MRU6 accepts direct AC/DC count input.

Encoders—Quadrature output signal provides extremely accurate position indication, ensuring that count is correct regardless of which direction the shaft is rotating. ABEC 3 double-sealed ball bearings keep foreign matter out. Housing is sealed against dust, oil, vapor, and moisture.

5FYG0

Preset Digital Counter and Counter/Tachometer

OMRON®

- Reset: External/manual/automatic
- Input signal: No voltage/voltage switchable
- PNP/NPN selectable input

These high-speed response, electronic preset units have 6 digits and 11 (5FY60) or 12 (5FYG1) operating modes. Enhanced features allow configurations as a 1-stage or 2-stage total, batch, or dual counter. (5FYG1 can also be used as a tachometer.) Display color is programmable to alert change in output status. All parameters can be set via front membrane keys or DIP switches. Units provide 12VDC output for external sensors. Negative transmissive LCD and EEPROM memory backup, sustained and 1-shot outputs. Key protect function. 1/16 DIN panel mount (includes adapter). NEMA 4/IP66 front panel. 1⅞" square x 4³⁄₁₆" long. UL Listed and CE Certified.

Temperature Controllers

Designed to monitor and control heating and/or cooling process applications. Thermocouple input, no calibration required. Hardware included for panel mounting.

E5C2 Series—Manual dial setting; Type J thermocouple input. 8-pin octal relay socket mountable; order 5X852 on page 216.

E5CS Series—Easy setting through internal DIP and rotary switches. On-demand auto-tune. Multiple input. Deviation indicator for easy monitoring. 8-mode alarm output and sensor error detection. Input shift function adjusts display to reflect known sensor offsets. CE Certified.

Temperature Control Boxes

Include 6-ft. cord. All components are UL Listed or Recognized, CSA and CE Certified.

PCT Series—Feature pilot light and 15A straight-blade heater receptacle. For indoor use. Analog boxes have blue metal housing, mounting slots, and 4° typical hysteresis. Digital boxes have plastic housing, TEC-220 electronic temp. controller, and red illuminated On/Off rocker switch. 5FYL4 to 5FYL7 have Invensys-type mechanical thermostat with 4" bulb and 48" capillary.

PCM Series—NEMA 12 enclosure. Feature TEC-9100 electronic temp. control. 5FYN6 to 5FYN9 have 20A straight-blade heater receptacle and standard thermocouple jacks. 5FYP0 to 5FYP3 have internal blocks and can be used on single or 3 phase.

PXU Series Temperature Controllers

- Programmable
- 2 alarms
- 100 to 240VAC or 24VDC

Accept a wide variety of thermocouple and RTD sensor inputs to meet varying application requirements. Designed for simultaneous viewing of temperature/process, and setpoint values. Features on demand auto-tuning for easy set up and provides 2 control outputs, which can be individually configured for reverse or direct applications using front panel push-button or Crimson® software. Large dual line, 4-digit displays. IP65 ingress protection. UL Listed, 61010-1 approved.

TEMPCO

THERMOCOUPLES

Bendable, Mineral Insulated

Plug and jack connectors allow probe to measure temperature in hard-to-reach areas.

Heavy-Duty

Rugged, pipe-protected thermocouple element is for use in heavier industrial applications. Easy field wiring of enclosed terminals found inside protected head.

Adjustable Depth

Thermocouples adjust to immersion well depth. For extruders and platens. Spade terminals and adjustable bayonet cap.

Lug Type

¼"-hole thermocouples are held in place by a bolt to measure surface temperatures.

RTD

Resistance temperature detectors (RTDs) offer greater repeatability and interchangeability than thermocouples or thermistors over the standard temperature scale.

Thermocouple Wire

Senses temperature of an object and feeds that information to a temperature control device that regulates power to the heating source or to a measuring instrument or temperature monitoring device.

TEMPCO

Types MG, TGGT, and PTFE High-Temp. Lead Wires

For commercial or industrial applications, heaters, furnaces, kilns, and food service equipment.

TYPE MG

- Rated for 600V

Mica glass composite insulation over stranded nickel-clad copper conductors. Covered by fiberglass overbraid with high-temp. finish for superior insulation and dielectric strength. UL 5335/5107, CSA AWM Class 1 Group A/B FT-1.

TYPE PTFE

- Rated for 300V

PTFE insulation is extruded over silver-plated copper conductors for high-temp. performance. UL 1180, CSA AWM Class 1 Group A/B FT-1.

TYPE TGGT

- Rated for 600V

Insulated with PTFE tape over stranded nickel-plated copper conductors, then 2 layers of fiberglass insulation. Covered by PTFE-treated fiberglass overbraid for safe, high-temp. applications. UL 5256, CSA AWM Class 1 Group A/B.

HUBBELL® WIEGMANN®

Oiltight Enclosures for 22mm Operators

- NEMA rated 12 and 13
- JIC Standard EL-1-71

2VB59

2VB64

Neoprene gasket and mounting flange ensure oiltight seal. Captive cover screws are threaded into deep-well hubs. Carbon steel with ANSI 61 gray polyester powder-coated finish. Seam welded and ground smooth. Grounding stud included. UL Listed and CSA Certified.

Push-Button Pendant Stations

Come unassembled, except for 2-button pendant stations 2EV30 and 2EV31. UL Listed, CSA Certified, and CE Certified.

30MM

- NEMA rated 1, 3, 4, 4X, and 13 plastic enclosures
- ¾" NPT conduit entry

Use with any 30mm corrosion-resistant, nonilluminated operators. Interlocked push buttons include contact blocks; rated NEMA A-600.

22MM

- NEMA Type 1, 4, 4X, and 5 plastic enclosures
- 8 to 26mm cable entry

Use with a variety of 22mm corrosion-resistant, nonmetallic, nonilluminated operators. Contact blocks; rated NEMA A-600, Q-150DN.

30mm Nonilluminated Push Buttons, Complete Units Schneider Electric

Complete push buttons include interchangeable operators, contact blocks, and light modules. Oiltight, watertight, and dust-tight operators with interchangeable ring nuts and color inserts make design changes easy. NEMA 4 operators are chrome-plated die-cast zinc for rugged installations. NEMA 4X operators are black plastic for corrosion resistance. UL Listed, CE and CSA Certified.

30mm Contact Blocks

- NEMA rated A600-P600
- #12 to 24 AWG wire range allows use of more common small wire sizes

Finger-safe terminals are at 20° angle to eliminate interference with other contact blocks mounted in tandem. Feature double-break fine silver contacts with wiping action.

JIC and NEMA 12 and 13 Sloped Enclosures

- Carbon steel
- ANSI 61 gray polyester powder-coated finish
- Seam welded and ground smooth

UL Listed, CSA Certified.

ENCLOSURES

Angled face ensures all installed devices face operator. Enclosures have grounding provision. Captive cover screws are threaded into deep-well hubs.

Sloped Top

Enclosure can be mounted to create either a 30° or 60° angle for the control surface. Continuously hinged cover along bottom edge.

Push-Button

Accept all standard 30mm 4-way push buttons, switches, and pilot lights. Top and bottom mounting plate.

PEDESTAL COLUMNS AND BASES

Supports sloped-top enclosures.

Columns

Pedestal columns provide passage-way for wiring. Flanged at both ends with a gasketed cover plate. Include access plate, gaskets, screws, and box connective fittings. Angled pedestal has a 45° angle at top.

Bases

Floor-mounted with a square pattern of holes to fit a wiring column or other flanged device. Include leveling screws.

NT Series Toggle Switches

- ½" dia. hole mounting
- Temp. range: -85° to 160°F

Feature a movable seal between the toggle lever and bushing and a sealed case to meet NEMA 3, 3R, 4, 13 and IP67/IP68 seal ratings. Suitable for aerial and scissor lifts, truck-mounted telehandlers, cranes and construction, agriculture and material handling equipment, factory-floor control units, and machine tool equipment manufacturers. UL Recognized. CSA Certified and CE Approved.

Foot Switch Safety

It is the responsibility of the foot switch user to determine the suitability of a particular foot switch for its intended use and to be certain that it complies with all federal, state, and local safety and health regulations. Using foot switches on machinery that lacks effective point-of-operation safeguards can cause serious injury. Foot switches should be used only where point-of-operation and pinch-point guarding devices have been properly installed and are utilized to protect the operator's hands.

SQUARE D by Schneider Electric

Class 9007 Heavy-Duty Limit Switches

- Enclosures: NEMA 1, 2, 4, 6, 6P, 12, and 13 (IP65, IP66, IP67)
- Contacts rated 10A, 600V
- Limit switch arm required
- ½" NPT conduit entry

Bodies and heads are die-cast zinc alloy. Oiltight for efficient operation. For additional limit switch replacement parts, see Grainger.com®. UL Listed and CSA and CE Certified. Hazardous location units are UL Listed for Class I Div. 1 Groups B, C, D and Class II Groups E, F, G.

LS Series Limit Switches

- 1NO/1NC
- 4A
- Operating temp. range: -13° to 158°F

Modular switches are suitable for use in safety applications designed to protect persons or processes. Feature plug-in system, positive opening NC contacts, and operating heads that can be rotated 90° to suit a specific direction. LSM Series are designed with metal bodies, and LS Series feature more economical, plastic bodies. UL Listed. CSA and CE Certified.

Honeywell

Hazardous Location Limit Switches

- Aluminum construction
- NEMA rated 1, 7
- 2.56" H x 2.78" W x 2.02" D
- ½" NPT conduit entry
- Operating temp.: -40° to 160°F (except 12U990 and 12V003 are rated to 400°F)

Designed with flame paths in the housing that cool exploding gases below the kindling temperature before they reach the explosive gases surrounding the housing. Applications include control valves and actuators, petrochemical plants, conveyors, and material handling. ATEX, IEC Ex, Div. 1, & 2, Class I, Groups C, & D; Div. 1 & 2, Class II, Groups, E, F, & G; II 2 G, EEx d IIB + H2 T6. UL, CSA, ATEX, IEC Ex.

Waterproof Limit Switches

CPI Switches & Sensors

- Temp. range: -40° to 185°F

Submersible with proper wire sealing. For the harshest environments.

E-SERIES SWITCHES

Large overtravel capability and adjustable mounting brackets. Feature 1-way vertical and horizontal movement. Stainless steel bracket included. 5DKF7 has an ultralong actuating lever for extreme overtravel flexibility.

J-SERIES SWITCHES

Each includes stainless steel bracket. Plunger-style 5DKG0 and 5DKG1 feature omnidirectional movement. Patented ball design eliminates actuator jamming for precise control. Plunger-style 5DKG5 has a rugged, long-plunger actuator and vertical movement. Includes a Deutsche connector.

XCMD Series Miniature Limit Switches

- 1NO/1NC
- Enclosures: NEMA 1, 2, 4, 12, and 13 (IP67, IP68)
- 6A, 240VAC
- Operating temp. range: -25° to 70°F

Modular limit switches have integral snap-action contacts. Bodies are Zamak® zinc alloy. Class I protection against electric shock. 5 gn vibration resistance, and 25 gn shock resistance. For short-circuit protection, use 6A cartridge fuses, type gG. UL Listed and CSA Certified.

XCK Series Limit Switches

Telemecanique Sensors

- 1NO/1NC
- 10A, 240VAC/250VDC
- Operating temp. range: -13° to 158°F

XCKP SERIES

- Enclosures: NEMA 1, 4, and 12 (IP66, IP67)
- Mechanical life: 10 million operations

Complete switches are double insulated with no grounding required. Lever-operated CW and CCW in 5° and 90° increments. Slim body with metal head and plastic enclosure.

XCKD SERIES

- Enclosures: NEMA 1, 2, 4, 6, 12, and 13 (IP66, IP67)

Compact metal enclosure protects switches. Head, body, lever, and connector modularity.

WATERPROOF LIMIT SWITCHES

- Temp. range: -40° to 185ºF

Submersible with proper wire sealing. For the harshest environments.

BZ, BA, and BE Series feature wide operating characteristics and enhanced mechanical life up to 20,000,000 cycles. They meet 125, 250, and 480VAC, regardless of amperage. Rugged construction, low operating force, and differential travel with momentary or mechanical contact action. Elongated mounting holes allow easy and accurate mounting. Compact and lightweight with accurate repeatability. Suitable for building controls and fire suppression systems, communication systems, machine tools, door latching mechanisms, and most simple On/Off actions. UL Listed and CSA Certified. BZ and BA Series are ENEC Certified.

OMRON®

Snap-Action Switches

Functionally interchangeable with Unimax 2HB series. UL Recognized and CSA Certified.

Series A—For heavy-duty applications.

Series Z—High-precision general-purpose switches. 3XG49 is dripproof (IP62).

Series X—For DC applications.

Series DZ—Switches have 2 circuits.

Series TZ—High-temperature switches with max. ambient and operating temp. of 752°F (400°C).

Snap-Action Switches

Designed with 10, 15, 20, 25A ratings and a wide variety of actuators for differen applications. Provide high precision with long mechanical life. V Series feature low operating force and miniature size. Z Series have a high motor-load rating. For use with direct-to-switch loads like motors, halogen lamps, and solenoids; also for use with foot switches, flow switches, door interlocks, and applications requiring compact or miniature switches. UL and C-UL Listed. RoHS compliant.

Cable Pull Emergency Stop Switch

Cable Kit 10N099

Cable Pull Emergency Stop Switch and Cable Tension Kits

STI SAFETY, TECHNOLOGY & INNOVATION / OMRON

- Die-cast alloy case
- Vibration tolerant—no nuisance tripping
- NEMA 6 (IP66)

Combination cable and push button-actuated switch handles cable spans up to 246 ft. (75m). Built-in tension status indicator eases installation and troubleshooting. Heavy-duty housing stands up to demanding industrial applications and withstands water washdown cleaning. An integral E-stop button provides emergency stopping capability at the end of a cable run. Lid-mounted status indicator allows easy setup and maintenance. Designed for a minimum of 1 million actuations. Cable tension kit required, sold separately. UL and C-UL Listed and CE Certified.

Cable Pull Switches

SQUARE D by Schneider Electric / Telemecanique Sensors

Switches signal an emergency or normal stop at any point along a 165-ft. cable. Taut-cable principle ensures switch will activate if the cable is broken. Positive latching, force, and adjustment indicators. UL Listed and CSA Certified.

Emergency cable pull features latching contact (reset by push button) and positive opening contacts. Normal cable pull provides momentary action (no reset) and snap-action contact. 4B787 and 4B784 are recommended for outdoor applications where icy conditions are likely. 2FM01 provides 600VAC max. service for industrial applications.

CABLE KITS

Contain 1 galvanized steel cable with red jacket, 1 turnbuckle, 4 cable grip clamps, 1 fixed cable support, 1 end spring, and 3 wire end protective guards.

Safety Interlock Switches

STI SAFETY, TECHNOLOGY & INNOVATION · OMRON

TONGUE-OPERATED

Heads can be rotated in 4 directions, 8 for T2007 Series. Rated 5A at 100VAC, 2A at 250VAC, 1A at 500VAC, 2A at 24VDC, 0.5A at 250VDC. Includes ½" NPT conduit adapter.

D4NS Series—Switches handle both standard loads and micro-loads. Actuation keys sold separately.

D4BS Series—Actuation key (sold separately) prevents malfunctions and false operation. Switches conform to EN (TUV), BIA, and SUVA standards. UL Listed and CSA Certified.

TL4019 Series—Withstand water washdown cleaning. Feature 4 contacts and rear manual release. Narrow profile with rotatable head. Optional key release and optional slide bolt.

T2007 Series—Withstand water washdown cleaning. Min. 1 million actuations. Fit on 1" square tubing.

MAGNETICALLY ACTUATED, MA-16 SERIES

Completely encapsulated for use in harsh or wet environments. Tolerate guard door misalignment up to 10mm (0.39"). Min. 1 million actuations. UL and C-UL Listed and CE Certified.

Sti SAFETY, TECHNOLOGY & INNOVATION
OMRON

Force-Guided Relays and Sockets

Compact relays with force-guided contacts help avoid hazardous machine status when used as part of an interlock circuit. Designed for use where it is necessary to monitor relay contacts for safety purposes and to support the CE marking of machinery. Reinforced insulation between inputs and outputs. Terminal arrangement simplifies PCB pattern. Conform to EN standards (EN50205 Class A, approved by VDE). UL Recognized and CSA Certified.

Light Curtains

These Safety Light Curtains consist of an emitter and receiver pair that create a multi-beam barrier of infrared light in front of, or around, unsafe work areas. If any of the beams are blocked by personnel, the light curtain sends a signal to the machine to place it in a safe state. They meet the highest achievable safety level requirements: Type 4, SIL 3, and PLe. Available in both finger (14 mm) and hand (30 mm) resolutions and are simple to wire and install.

Rotating Mirror Beacons

- 20 flashes per minute
- 100,000-hr. lamp life
- Dome lens design
- Temp. range: 14° to 122ºF
- IP23 ABS housing with CR polychloroprene rubber gaskets

Provide long-distance, high visibility for machines and industrial vehicles. LED lamps for long life. Prewired for easy installation; screw mount. UL Listed, CSA and CE Certified.

50mm and 56mm Dia. Tower and 86mm Dia. Warning Lights

Dayton

- IP65 polycarbonate housing
- Lead wire type

56mm dia. tower lights feature steady and flashing stackable LED modular components. Available pole with surface, or wall mounting bracket, or direct mounting. Optional modular buzzer kits. 86mm dia. warning lights feature high-intensity LED lights, selectable steady/flashing/rotating modes. Available pole mounting or wall-mount bracket. UL Listed and CSA Certified.

Tower Lights, 40, 60, and 100mm Diameter

Schneider Electric

- IP54 polybutylene housing
- For outdoor or indoor use

Towers have up to 5 super-bright LEDs for optimum luminosity. Assembled and prewired. For long-distance indication of the operating states or sequences of a machine. 1 9/16" lights are primarily used in the food-processing and medical sectors. 2 3/8" lights are used in semiconductor factories or on conveyor belts. UL Listed, CSA and CE Certified.

Comet Thru-Beam Receiver with Cable 2XCA8

SM Series Retro-Reflective, Background Rejection with Cable 2XDL4

Enhanced 50 Series Polarized Retro-Reflective with 4-Pin Micro 2XCK1

EATON

Photoelectric Sensors

COMET SERIES

- IP69K rating
- Solid-state AC/DC models rated for 300mA; DC-only models rated for 250mA NPN and 100mA PNP
- Light/dark operation
- Temp. range: -4° to 158°F thru-beam source 2UUT5, 2UUT6, 2XCA1, and 2XCA2, and -13° to 151°F for 2XCA3 to 2XCA7
- Temp. range: -40° to 158°F all others

Industry-standard 18mm threaded flat tubular body can be mounted like a tubular sensor or against any flat surface. Visible sensing beam simplifies setup and alignment. Solid polyurethane housing is highly resistant to shock and vibration. Adaptable modulation circuit protects against crosstalk. Background rejection models reliably detect targets regardless of color, reflectance, contrast, and surface shape. UL and C-UL Listed and CE Certified, except UL 508 Certified thru-beam source 2XCA3 to 2XCA7 and polarized retroreflective 2XCG3 are CSA and CE Certified.

ENHANCED 50 SERIES

- Light/dark operation
- Temp. range: -13° to 151°F

Fully potted construction for use in areas subject to washdown, high shock, or high vibration. High optical performance. Adjustable gain pots allow precise adjustment. CSA, CE, and UL 508 Certified.

SM SERIES

- Visible positioning aid
- Threaded barrel
- 18mm lens snout
- Miniature size fits small spaces
- Temp. range: -13° to 151°F

Visible sensing beam simplifies setup and alignment. TargetLock™ ensures reliable operation. LEDs indicate output/power/TargetLock.

Reflectors

Telemecanique Sensors · EATON · ifm efector

CORNER CUBE REFLECTORS

Retroreflector prisms return a beam in the same direction it came from—even if the reflector and the source are skewed—for a high degree of reliability. For use with retroreflective photoelectric sensors. The only reflective surface that works with polarized photoelectric sensors. Select reflector smaller than your target.

Designed and tested to withstand industrial automation applications. Integrated microprocessor-based electronics offer high performance and are completely sealed in compact housings. Background suppression versions reliably differentiate between target and background regardless of background color. Reliable position detection in conveying, material handling, packaging, and automotive applications.

RIGHT ANGLE

- Max. range: 65-ft.
- AC version has 2 wires for quick installation
- 18mm dia. mounting thread

Cube sensor occupies less space than traditional tubular sensors and is ideal for applications with limited mounting space. Polarized retro-reflective models contain a filter that eliminates false triggers from shiny targets and a 13 ft. range with a 80mm dia. reflector. Metal body.

RECTANGULAR

- Max. range: 82-ft.
- Rugged housing

Connector rotates 270° for versatile mounting options. Protective metal frame withstands mechanical damage in applications.

35T420

35T430

Capacitive Proximity Sensors

M8, M12, and ½" Cordsets

ifm efector

- Female connector to flying leads

Deliver high quality and excellent value. Designed with a lock-in-place coupling nut that secures the cordset to a quick disconnect sensor and resists high levels of shock and vibration. High-flex, PUR-jacketed cable is rated to over 5 million flex cycles. Features a special insert that acts as a mechanical end-stop preventing damage to the O-ring. Designed to resist harsh conditions in industrial automation and oils and coolants. Silicon and halogen free.

Telemecanique Cylindrical Inductive Proximity Sensors

Telemecanique Sensors

- Temp. range: -13° to 158° F; except food and beverage, -13° to 185°F

NEMA 4X rated. UL Listed, CSA and CE Certified, RoHS compliant.

Food and beverage sensors are rated IP69K for high-pressure, high-temp. washdown applications.

EATON

Eaton Cylindrical Inductive Proximity Sensors

Stainless steel sensors for use with metallic targets. NEMA rated 4, 4X, 6, 6P, 12, and 13 (IP67, IP69K). C-UL Listed. Models with NPN and PNP circuits also CE Certified.

IPROX®
- AC models rated for 250mA max. load
- DC models rated for 300mA max. load
- Temp. range: -40° to 158°F

Extended sensing ranges. Shock-resistant front cap. Wired NO; advanced features can be configured using optional software 2XDL3, sold separately. For automotive, machine tool, material handling, and metal-working applications.

E57 SERIES
- AC and DC models rated for 250mA max. load
- Temp. range: -13° to 158°F
- 360° LED status indicator

ifm efector

Inductive Proximity Sensors

Ideal for noncontact detection of metal targets in position sensing applications and part presence application. Extended sensing ranges reduce failure from mechanical damage. Robust housing is designed for industrial applications. 4 visible LED outputs indicate status, making troubleshooting quick and easy. NEMA IP67.

Inductive Proximity Sensors

ifm efector

- NEMA rated IP67
- Operating temp. range: -13° to 176°F
- 0.40" W x 1.09" L x 0.63" D

Feature 2m cable connection, PBT case, shielded body, and 1 yellow LED for output state.

Pumptrol® Air Pressure Switches—Fixed Differential

- 2-pole, HP rated
- Diaphragm actuated
- Contacts open on pressure rise
- NEMA 1 enclosure

Control electrically driven air compressors. Unloader models feature a small valve that opens at shutoff, releasing air pressure from the compressor head. Temp. range: -22° to 257°F. UL Listed and CSA Certified.

Pumptrol® Air and Water Pressure Switches—Adjustable Differential

- 2-pole, HP rated
- Diaphragm actuated
- Contacts open on pressure rise
- NEMA 1 enclosure

Control electrically driven air compressors or pumps. Unloader models feature a small valve that opens at shutoff, releasing air pressure from the compressor head. Temp. range: -22° to 257°F. UL Listed and CSA Certified.

Pumptrol® Water Pump Pressure Switches

- 1- and 2-pole, HP Rated
- ¼" female connection
- Diaphragm actuated
- NEMA 1 enclosure

Designed for direct control of electrically driven pumps. Can be used with motor starters to control higher horsepower motors. Low pressure cutoff switches operate at approximately 10 psi below the cut-in setting and will turn the pump off. Switches with a pulsation plug sense change over a longer interval and does not respond to spikes. Temp. range: -22° to 257°F. UL Listed and CSA Certified.

Dayton® Water Pump Pressure Switches

- Diaphragm actuated
- Pressure range: 10 to 100 psi
- Differential pressure range: 15 to 50 psi
- 20/12A at 120/240V
- DPST
- ¼" FNPT
- NEMA 1 enclosure
- 3-yr. warranty

Rated 1½ HP at 1-phase, 120V; 2 HP at 1-phase, 230V. Temp. range: -22° to 250°F. Switches with low pressure cutoff will turn the pump off at approximately 10 psi below the cut-in setting. UL Listed and CSA Certified.

MDR11 Series w/Unloader and Auto/Off Switch 3AFU8

MDR3 Series w/Unloader and Auto/Off Switch 3FWE3

Air Compressor Pressure Switches

For all global air compressor and water applications. Rotatable unloader valve simplifies retrofit onto compressors. Diaphragm actuated.

MDR11 SERIES

- DPST switch
- Rated 26A
- Temp. range: -22° to 257°F

UL Listed and CSA Certified.

MDR3 AND MDR3/OL SERIES

- 3PST Switch
- Rated 30A, 1-phase/24A, 3-phase
- Temp. range: -22° to 257°F

MDR-3/OL Series combines the function of a pressure switch and magnetic starter into 1 unit. Built-in overload protection. All are UL Listed, CSA and CE Certified.

SQUARE D by Schneider Electric

Machine Tool, Dual Stage, and Differential Pressure Switches

- ¼" NPT female inlet, except male 3FJZ8
- Rated 10A
- Temp. range: -10° to 185°F

Can be applied to a wide variety of pneumatic and hydraulic machine and process applications to control or monitor system pressure and protect equipment. UL Listed and CSA Certified.

ASHCROFT

Harsh Environment Pressure Switches

- ¼" FNPT inlet port
- Stainless steel pressure connection
- Viton® actuator seal
- Temp. range: 20° to 300°F

For harsh environments using pumps, compressors, hydraulic systems, and HVAC equipment. Watertight enclosure meets NEMA 3, 4, 4X, and 13, and IP66. Fixed deadband. Switch rated 15A at 125/250VAC; 0.5A at 125VDC.

Vacuum Switches

SQUARE D by Schneider Electric

- Diaphragm actuated
- Rated 10A, 600VAC
- Ambient temp. range: -10° to 185°F
- Media temp. range: -40° to 250°F

Monitor and control vacuum conditions in sensitive control applications. UL Listed, CSA Certified. GAW series is CE Certified.

SERIES GVG

Designed as companions to Class 9036 and Class 9037 Type GG float switches commonly used on vacuum heating pumps. HP rating: 2 HP at 110VAC, 3 HP at 220VAC, 5 HP at 440-550VAC.

Screw Cover Pull Boxes

Suitable for use as a junction or pull box in commercial and industrial applications. UL Listed and CSA Certified.

NEMA 1

Feature mounting holes on back of box. Cover design allows easy removal without extracting cover screws.

NEMA 3R

Provide protection in outdoor applications against rain, sleet, and snow, or indoors against dripping water. Use as wiring box or junction box. Feature slip-on cover that is securely fastened with screws. Drip shield top and smooth seamless sides and front.

NEMA 1 Wireway Duct and Fittings

HUBBELL WIEGMANN

- 16-ga. carbon steel bodies
- ANSI 61 gray polyester powder-coated finish

Straight wireway duct protects electrical wiring in locations where dust, dirt, oil, and water are not serious problems. Hinged covers allow easy lay-in of wires. Doors can be hung in open position or removed from tub. UL Listed and CSA Certified.

NEMA 3R Wiring Troughs

Protect wiring in outdoor installations from rain, sleet, and snow, or indoors against dripping water. Feature drip shield top and smooth seamless sides that prevent rain, snow, and sleet from entering enclosure. Embossed mounting holes on back. Slip-on removable cover is fastened with screws located along the bottom edge. Knockouts are located on bottom of enclosure. Gray polyester powder-coated finish or unpainted galvanized steel. UL Listed and CSA Certified.

HUBBELL WIEGMANN

NEMA 4 and 4X Enclosures

- 14-ga. carbon steel and 16-ga. stainless steel
- ANSI 61 gray polyester powder-coated finish on painted steel units
- Neoprene gasket on NEMA 4 (JIC)
- Polyurethane foam-in-place seamless gasket on NEMA Type 4

Provide nonsubmersible watertight protection indoors and outdoors where splashing, dripping, or hose-down of noncorrosive liquids can occur. Cover is mounted to box with a sturdy continuous hinge. All hardware, door clamps, and hinges are stainless steel. Interior panels sold separately (see page 292). UL Listed and CSA Certified.

HUBBELL
WIEGMANN

Wiegmann N412C ULTIMATE Series Enclosures

Protect electrical and electronic components form harsh environments. Designed with a 20° sloped-top and feature fabricated bodies and doors from 14- or 16-ga. steel with continuously plasma welded seams. Doors are interchangeable, easily removable and have flush latching. Have concealed hinges and doors are sealed with a closed cell neoprene gasket. Increased tub opening provides better access. Smooth grain finish.

Hoffman

Aluminum Enclosures, NEMA 12 and 13

Lightweight enclosures protect components and controls in indoor applications. Designed with seams that are continuously welded and ground smooth. Stainless steel screws and clamps secure cover that is removed by pulling stainless steel continuous hinge pin. Weldnuts are furnished for mounting optional panels and terminal block kit. Oil-resistant gasket. Enclosures are unpainted; cover and sides of body have smooth, brushed finish.

Hoffman

NEMA 12 and 13 Enclosures

Constructed of 16- or 14-ga. steel, and feature seams continuously welded and ground smooth. Bonding provision on door. A51SC Series have ANSI 61 gray polyester powder paint inside and out. Designed with screw cover and is secured in each corner for a positive seal that is easily removed for modifications. A51CH Series have ANSI 61 gray polyester powder paint inside and out. Designed with screw-down clamps for secure closure and can be used in a wide variety of applications. A12 Series have a white inside with ANSI 61 gray finish on the outside. Designed for applications requiring a bright white interior to increase visibility; includes a padlocking hasp and staple for security and screw-down clamps for secure closure.
